

PIC32MX

clicker

new idea just a click away

A compact starter kit with your favorite microcontroller and a socket for click™ add-on boards. New ideas are just a click away.

TO OUR VALUED CUSTOMERS

I want to express my thanks to you for being interested in our products and for having confidence in MikroElektronika.

The primary aim of our company is to design and produce high quality electronic products and to constantly improve the performance thereof in order to better suit your needs.

1. What is PIC32MX clicker?

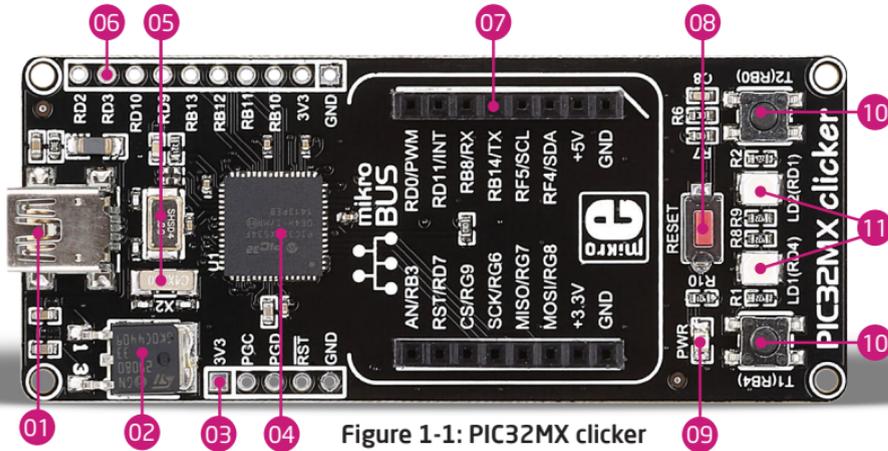

Figure 1-1: PIC32MX clicker

- 01 USB Mini-B connector
- 02 3.3V Voltage regulator
- 03 mikroProg™ Programmer connector
- 04 PIC32MX534F064H microcontroller
- 05 Crystal oscillators (8MHz and 32kHz)
- 06 Connection pads
- 07 mikroBUS™ socket
- 08 RESET button
- 09 Power indication LED
- 10 Additional buttons
- 11 Additional LEDs

PIC32MX clicker is an amazingly compact starter development kit which brings innovative mikroBUS™ host socket to your favorite microcontroller. It features the **PIC32MX534F064H** 32-bit microcontroller, two indication LEDs, two general purpose buttons, reset button, USB MINI-B connector and a single mikroBUS™ host socket. mikroProg connector and pads for interfacing with external electronics are provided as well. mikroBUS™ host connector consists of two 1x8 female headers with **SPI**, **I²C**, **UART**, **RST**, **PwM**, **Analog** and **Interrupt** lines as well as **3.3V**, **5V** and **GND** power lines. **PIC32MX clicker** board can be powered over USB cable. On-board power circuitry generates 3.3V and 5V. Power diode (GREEN) indicates the presence of power supply.

2. Power supply

When the board is powered up the power indication LED will be automatically turned on. The USB connection can provide up to 500mA of current which is more than enough for the operation of all on-board and additional modules.

through CN1 connector

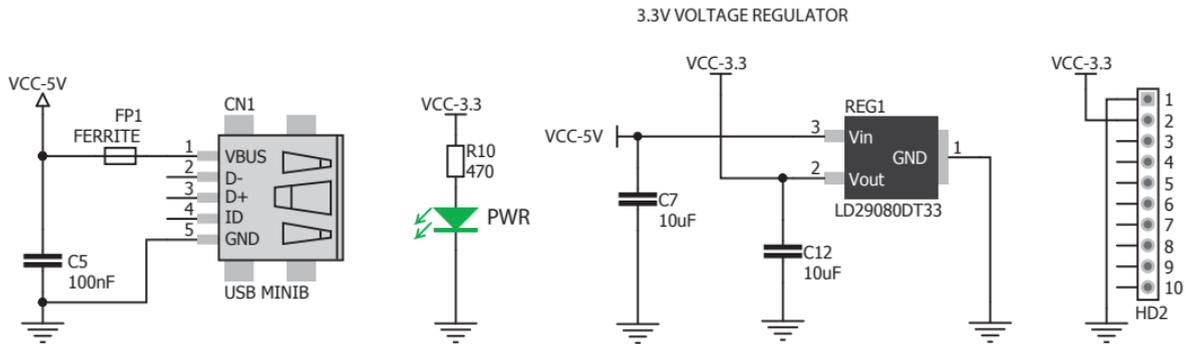

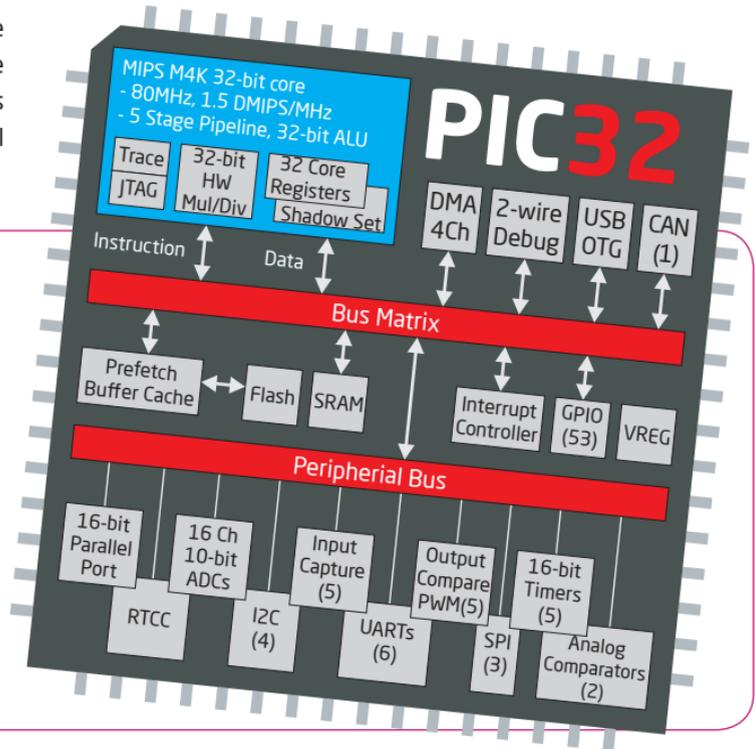

Figure 2-2: Power supply schematic

3. PIC32MX534F064H microcontroller

The PIC32MX clicker development tool comes with the **PIC32MX534F064H** microcontroller. This 32-bit MIPS M4K Core high performance microcontroller is rich with on-chip peripherals and features 64KB of Flash and 16KB RAM. It has integrated full speed USB 2.0. support.

Key microcontroller features

- 80MHz/105DMIPS, 32-bit MIPS M4K Core;
- 64KB Flash (plus 12K boot Flash);
- 16KB RAM (can execute from RAM);
- 53 I/O pins;
- SPI, I2C, A/D, CAN
- 16-bit Digital Timers;
- Internal Oscillator 8MHz, 32kHz;
- RTCC, etc.

4. Programming the microcontroller

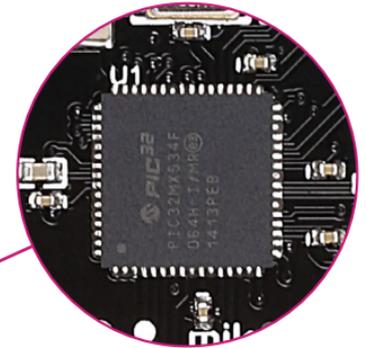

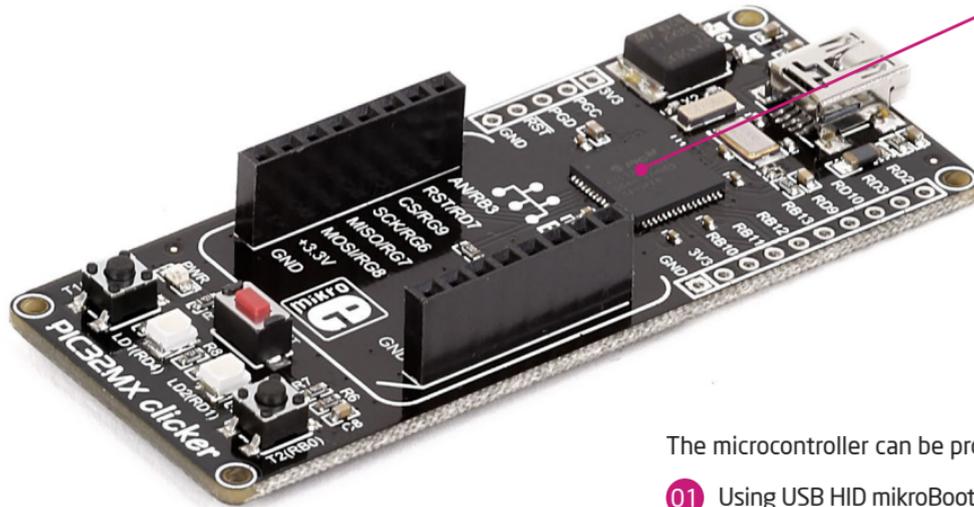

Figure 4-1:
PIC32MX534F064H
microcontroller

The microcontroller can be programmed in two ways:

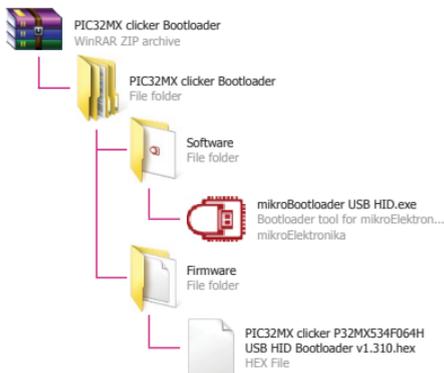

- 01 Using USB HID mikroBootloader,
- 02 Using external mikroProg™ for PIC®, dsPIC®, PIC32® programmer.

Programming with mikroBootloader

You can program the microcontroller with bootloader which is preprogrammed by default. To transfer .hex file from a PC to MCU you need bootloader software (**mikroBootloader USB HID**) which can be downloaded from:

 www.mikroe.com/downloads/get/2209/pic32mx_clicker_bootloader_v100.zip

After the mikroBootloader software is downloaded, unzip it to desired location and start it.

step 1 – Connecting PIC32MX clicker

Figure 4-2: USB HID mikroBootloader window

01 To start, connect the USB cable, or if already connected press the **Reset** button on your PIC32MX clicker. Click the **Connect** button within 5s to enter the bootloader mode, otherwise existing microcontroller program will execute.

step 2 – Browsing for .HEX file

Figure 4-3: Browse for HEX

- 01 Click the **Browse for HEX** button and from a pop-up window (**Figure 3.4**) choose the .HEX file which will be uploaded to MCU memory.

step 3 – Selecting .HEX file

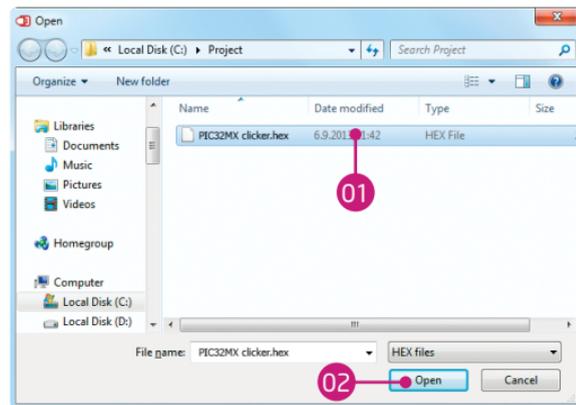

Figure 4-4: Selecting HEX

- 01 Select .HEX file using open dialog window.
- 02 Click the **Open** button.

step 4 – Uploading .HEX file

Figure 4-5: Begin uploading

- 01 To start .HEX file bootloading click the **Begin uploading** button.

Figure 4-6: Progress bar

- 01 Progress bar enables you to monitor .HEX file uploading.

step 5 – Finish upload

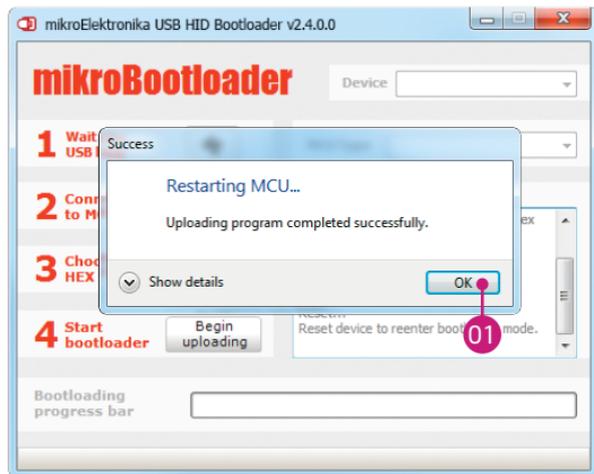

Figure 4-7: Restarting MCU

- 01 Click **OK** button after the uploading process is finished.
- 02 Press **Reset** button on PIC32MX clicker board and wait for 5 seconds. Your program will run automatically.

Programming with mikroProg™ programmer

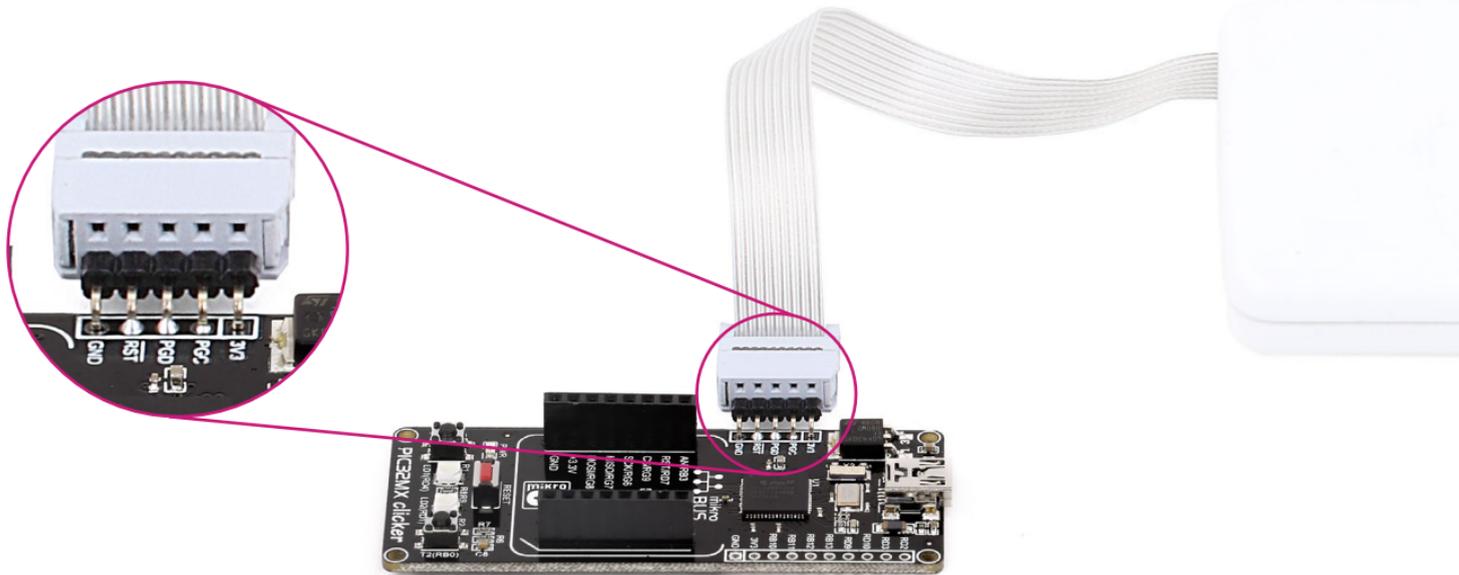

Figure 4-9: mikroProg™ connector

The microcontroller can be programmed with external **mikroProg™ for PIC®, dsPIC® and PIC32® programmer** and **mikroProg Suite™ for PIC® software**. The external programmer is connected to the development system via 1x5 mikroProg™ connector, **Figure 4-9**. **mikroProg™** is a fast USB 2.0 programmer with hardware debugger support. It supports PIC10®, PIC12®, PIC16®, PIC18®, dsPIC30/33®, PIC24® and PIC32® devices from Microchip®. Outstanding performance, easy operation and elegant design are its key features.

5. mikroProg Suite™ for PIC® Software

The **mikroProg™** programmer requires special programming software called **mikroProg Suite™ for PIC®**. It can be used for programming all Microchip® microcontroller families, including PIC10®, PIC12®, PIC16®, PIC18®, dsPIC30/33®, PIC24® and PIC32®. The software has intuitive interface and SingleClick™ programming technology. Just download the latest version of **mikroProg Suite™** and your programmer is ready to program new devices. **mikroProg Suite™** is updated regularly, at least four times a year, so your programmer will be more and more powerful with each new release.

6. Buttons and LEDs

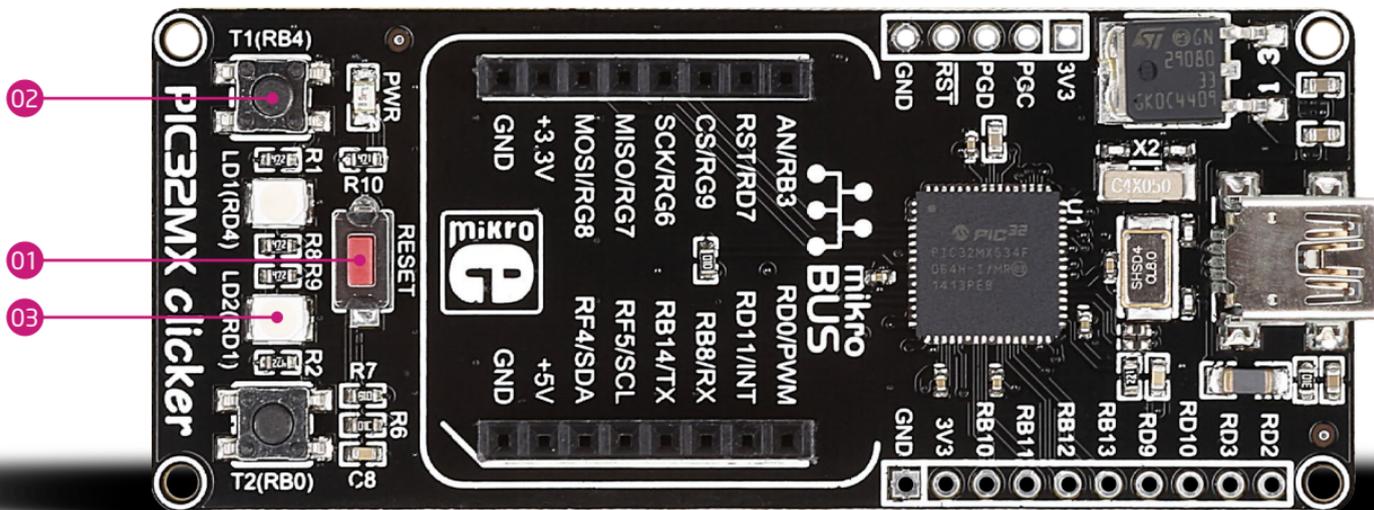

Figure 6-1: Two buttons, two LEDs and a reset button

The board also contains **01** reset button and a pair of **02** buttons and **03** LEDs. Each of these additional peripheral are located in the bottom area of the board. **Reset button** is used to manually reset the microcontroller. Pressing the reset button will generate low voltage level on microcontroller reset pin. **LEDs** can be used for visual indication of the logic state on two pins (**RD4** and **RD1**). An active LED indicates that a logic high (1) is present on the pin. Pressing any of these **buttons** can change the logic state of the microcontroller pins (**RB4** and **RB0**) from logic high (1) to logic low (0).

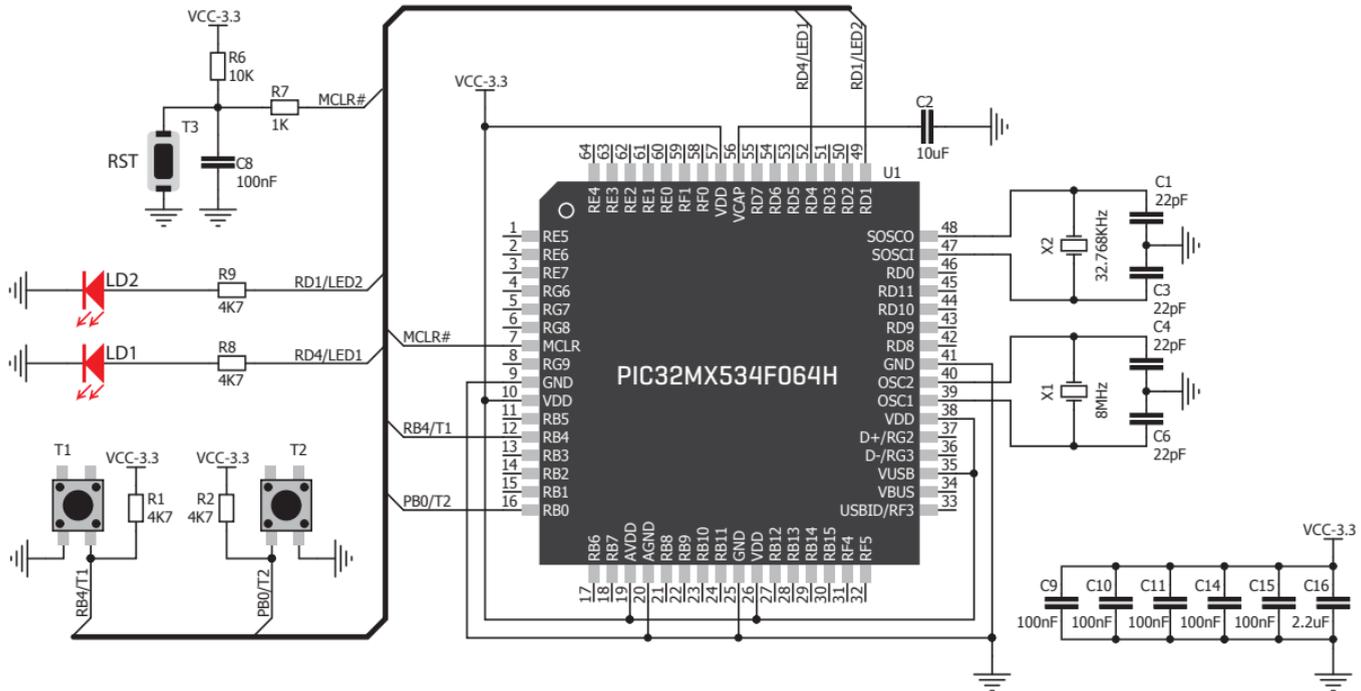

Figure 6-2: Other modules connection schematic

7. click™ boards are plug and play!

Up to now, MikroElektronika has released more than 100 mikroBUS™ compatible **click™ boards**. On the average, one click™ board is released per week. It is our intention to provide you with as many add-on boards as possible, so you will be able to expand your development board with additional functionality. Each board comes with a set of working example codes. Please visit the click™ boards webpage for the complete list of currently available boards:

 www.mikroe.com/click

GSM click™ board

8. Pinout

In addition to the mikroBUS™ socket, the PIC32MX clicker has a row of 9 pins with Analog, Interrupt, I2C, UART and PWM lines (+ GND) for connecting external electronics.

RD2	SDA3	U1RX	PWM3
RD3	SCL3	U1TX	PWM4
RD10	INT3	SCL1	
RD9	INT2	SDA1	
RB13	AN13		
RB12	AN12		
RB11	AN11		
RB10	AN10
