Features

- Extend the terminals on your SNAP I/O modules for easier, cleaner wiring to field devices.
- Six-foot (1.8 meter) wiring cables plug into tops of I/O modules for quick replacement.
- Breakout boards offer options such as fusing, power to loads, and mechanical relays.
- Specialty cables integrate older G4 digital I/O with SNAP PAC I/O.

Description

SNAP TEX cables and breakout boards are part of the SNAP TEX family of wiring and mounting accessories. These parts save time and expense during installation, maintenance, and debugging by reducing the time and effort required to wire field devices to SNAP I/O modules.

Choose the cables and breakout boards for your modules based on the table that starts on page 2.

Specifications, dimensions, and wiring diagrams begin on page 5.

Part Numbers

| Part | Description | |
|---------------|---|--|
| | Cables | |
| SNAP-TEX-CBO6 | 6 ft. (1.8 m), 8-wire cable for SNAP I/O modules. Odd terminals commoned | |
| SNAP-TEX-CBE6 | 6 ft. (1.8 m), 8-wire cable for SNAP I/O modules. Even terminals commoned | |
| SNAP-TEX-CBS6 | 6 ft. (1.8 m), 8-wire cable for SNAP I/O modules. Straight-through; no common terminals. | |
| SNAP-HD-ACF6 | 6 ft. (1.8 m) wiring harness assembly for SNAP 16-point digital modules | |
| SNAP-HD-BF6 | 6 ft. (1.8 m) wiring harness for 32-channel modules and breakout boards | |
| SNAP-HD-CBF6 | 6 ft. (1.8 m) wiring harness with flying leads for most 32-point modules | |
| SNAP-HD-G4F6 | 6 ft. (1.8 m) header cable for SNAP-ODC- 32-SNK and SNAP-IDC-32 digital modules and G4PB16H and G4PB16HC mounting racks. Also for SNAP-ODC-32-SRC when connecting to a SNAP-MR10-16C break- out board. | |
| SNAP-HD-G4F6N | 6 ft. (1.8 m) header cable for SNAP-IDC- 32N digital modules and G4PB16H and G4PB16HC mounting racks | |

SNAP TEX Cables

SNAP TEX cables provide convenient connections from I/O modules to field wiring. Most cables are designed to connect to breakout boards; some cables have flying leads for direct connection to field devices.

SNAP TEX Breakout Boards

SNAP TEX breakout boards move terminals away from the crowded rack area for easier installation and maintenance. Some breakout boards, such as the SNAP-AIMA-HDB, work only with specific modules; others are designed to be used with several types of modules. See tables starting on page 2.

Part Numbers (continued)

| Part | Description |
|------------------------------------|--|
| E | Breakout Boards |
| SNAP-TEX-32 | 32-point breakout board for SNAP I/O modules |
| SNAP-TEX-FB16-H | 16-point breakout board for SNAP I/O modules, with fuses, fuse-blown indica- tors, & bussed power (120–240 V) |
| SNAP-TEX-FB16-L | 16-point breakout board for SNAP I/O modules, with fuses, fuse-blown indica- tors, & bussed power (12–24 V) |
| SNAP-TEX-MR10-4 | Mechanical relay breakout board for a 4- channel SNAP digital output module |
| SNAP-TEX-MR10-16 | Mechanical relay breakout board for one high-density or four 4-channel SNAP dig- ital output modules. |
| SNAP-TEX-MR10-16C | Mechanical relay breakout board for one high-density or four 4-channel SNAP dig- ital output modules. Header connector connects two boards to one high-density digital module. Optional jumper straps. |
| SNAP-IDC-HDB SNAP-IDC-HDB-FM* | Fused breakout board for SNAP 32-point digital input modules |
| SNAP-ODC-HDB SNAP-ODC-HDB-FM* | Fused breakout board for SNAP 32-point digital output modules |
| SNAP-AIMA-HDB SNAP-AIMA-HDB-FM* | Breakout boards for SNAP-AIMA-32 and SNAP-AIMA-32-FM analog input mod- ules |
| SNAP-AIV-HDB SNAP-AIV-HDB-FM* | Breakout boards for SNAP-AIV-32 and SNAP-AIV-32-FM analog modules |

SNAP-TEX-CBO6, SNAP-TEX-CBE6, SNAP-TEX-CBS6 Cables

These three cables provide neat, protected wiring from the top of the module to the breakout board. Each cable snaps into the top of one module and terminates at the breakout board with 18-gauge, color-coded flying leads, already stripped and ready for wiring. The leads attach easily to the breakout board with spring connectors.

SNAP-TEX-CBO6—Odd-numbered terminals are commoned.

SNAP-TEX-CBE6—Even-numbered terminals are commoned.

SNAP-TEX-CBS6—No common terminals; wiring is straight through.

See the table starting on page 2 to determine the correct cable for your module and breakout board.

This photo shows the contrast between a regularly wired SNAP PAC rack (at upper left) and one using SNAP-TEX-CBE6, -CBO6, and -CBS6 cables (at lower right).

The cables protect top-of-module connections and wires, and make it easier to follow wiring to field devices.

Cables terminate in color-coded flying leads, already stripped and ready for wiring.

Installation, maintenance, and troubleshooting are faster and simpler using the SNAP TEX cables.

SNAP-HD-ACF6, SNAP-HD-CBF6, and SNAP-HD-BF6 Cables

The SNAP-HD-ACF6, SNAP-HD-CBF6, and SNAP-HD-BF6 cables connect 16- and 32-channel modules to field wiring or breakout boards. Each cable is 6 ft. (1.8 m) long.

The **SNAP-HD-ACF6** and the **SNAP-HD-CBF6** have connectors at one end that attach to the top of a module and flying leads at the other end for field wiring. The ACF6 is for 16-channel modules and the CBF6 is for 32-channel modules.

The **SNAP-HD-BF6** has connectors at both ends, one for a 32-channel module and the other for a suitable breakout rack.

SNAP-HD-CBF6

Cable Specifications

See table starting on page 2 for detailed module, cable, and breakout board compatibility.

SNAP-HD-G4F6 and SNAP-HD-G4F6N Cables

The SNAP-HD-G4F6 and SNAP-HD-G4F6N cables are used to connect a SNAP high-density digital (HDD) module to G4 mounting racks in order to integrate older G4 (or even G1) digital output systems with modern PAC Project software and SNAP PAC Ethernet-based controllers.

For outputs, this connection makes available the G4 output's up to 3-amp switching and sensing capability, which can provide twelve times the 0.25 amp capability of the high-density digital modules themselves. (For details of individual G4 module capabilities, see Opto 22 form #727, the G4 Digital I/O Data Book.)

The header cable connects two 16-channel mounting racks to one 32-channel digital module. The cable can also be used to connect G1 mounting racks with header connectors to these modules. See the table below for module and rack compatibility.

The SNAP-HD-G4F6 cable can also be used to connect two SNAP-TEX-MR10-16C breakout boards to one 32-channel digital module. See "SNAP-TEX-MR10-16C Breakout Board" on page 19.

For more information on HDD modules, see form #1556, the SNAP High-Density Digital Module Data Sheet.

SNAP-HD-G4F6 and SNAP-HD-G4F6N Cables—Compatible Modules and Racks

| Cable | Modules | Racks | S | Integrated I/O |
|---------------|---------------------------------------|---------------------|-----------------|----------------|
| SNAP-HD-G4F6 | SNAP-ODC-32-SNK SNAP-ODC-32-SNK-FM | G4PB16H G4PB16HC | PB16H PB16HC | G4PB16L PB16L |
| SNAP-HD-G4F6N | SNAP-IDC-32N* SNAP-IDC-32DN* | G4PB16H G4PB16HC | PB16H PB16HC | - |

* For 15 volt or 24 volt G1 or G4 modules, use the SNAP-IDC-32N. For 5 volt modules, use the SNAP-IDC-32DN.

NOTE: While not designed for this use, it is possible to connect the SNAP-IDC-32 module with G4 15 or 24 V inputs using a SNAP-HD-G4F6 cable. However, the SNAP-IDC-32 uses positive-true logic and therefore returns the inverse of the typical negative-true logic. For example, if the SNAP-IDC-32 is controlled by a PAC Control strategy, an "OFF" state from it actually indicates that the associated G4 module is turned ON.

SNAP-TEX-32, SNAP-TEX-FB16-H, SNAP-TEX-FB16-L Breakout Boards

The **SNAP-TEX-32** is a simple breakout board with straightthrough wiring. Designed primarily for 2- and 4-channel analog inputs/outputs and for 4-channel digital inputs, the breakout board is used with SNAP-TEX cables.

The SNAP-TEX-32 can also be used with 8-, 16-, or 32-channel SNAP analog modules (not thermocouples). See the table beginning on page 2 for recommended cable and board combinations for your modules.

The **SNAP-TEX-FB16-H** and **SNAP-TEX-FB16-L** breakout boards provide a fuse and a fuse-blown indicator for each of their 16 channels. In addition, they provide power to loads: the SNAP-TEX-F16-H provides 120–240 volts, and the SNAP-TEX-F16-L provides 12–24 volts. Simply attach the power source to a single spot in the middle of the rack, and power goes out to solenoids or switches, depending on the module you're using. These breakout boards are used primarily for digital inputs and outputs.

CAUTION: Odd pins on the SNAP-TEX-FB16-H and SNAP-TEX-FB16-L breakout boards are commoned. Use *only* straight-through or odd cables with these boards.

SNAP-TEX-MR10-4 and SNAP-TEX-MR10-16 Breakout Boards

The SNAP-TEX-MR10-4 and SNAP-TEX-MR10-16 breakout

boards, designed for high-current switching, feature mechanical relays that can switch up to 10 A per channel. (Standard SNAP output modules can switch up to 0.75 A; SNAP-OMR6 output modules can switch up to 6 A.)

These breakout boards include on/off indicators for each channel, and each channel can be wired for normally closed or normally open. The boards require 24 VDC power.

A replacement relay is available, part number SNAP-MR10.

Also see "SNAP-TEX-MR10-16C Breakout Board" on page 19.

Specifications

See the tables beginning on page 2 for compatible modules and cables.

> PAGE 18

SNAP-TEX-MR10-16C Breakout Board

The **SNAP-TEX-MR10-16C** breakout board, designed for high-voltage/high-current switching, features mechanical relays that can switch up to 10 A per channel. (Standard SNAP output modules can switch up to 0.75 A; SNAP-OMR6 output modules can switch up to 6 A.)

This breakout board includes on/off indicators for each channel, and each channel can be wired for normally closed or normally open. The boards require 24 VDC power.

This board allows you to connect digital output modules in two ways:

- Connect 4 standard four-channel ODC modules using the two *spring connectors* and the appropriate cable for the modules. See page 20.
- Connect one SNAP-ODC-32-SRC high-density module to the *header connectors* on two MR10-16C breakout boards. Requires a SNAP-HD-G4F6 cable.

Bussed commons in 2-channel groups provide easier wiring of loads. Bussing straps (STRAP2Q and STRAP4Q) can be used for quick common power connections between relay groups. See page 21.

A replacement relay is available, part number SNAP-MR10.

Also see "SNAP-TEX-MR10-4 and SNAP-TEX-MR10-16 Breakout Boards" on page 16.

Specifications

Also see the tables beginning on page 2 for compatible modules and cables.

| Feature | SNAP-TEX-MR10-16C |
|---------------------------------------|---|
| Use with I/O modules | SNAP-ODC5-i, SNAP-ODC5A-i, SNAP-ODC5SRC, SNAP-ODC-32-SRC |
| Use with cables | For one high-density SNAP-ODC-32-SRC module, use a SNAP-HD-G4F6 cable to connect two breakout boards to one SNAP-ODC-32-SRC module. For four standard modules, use SNAP-TEX-CBO6 (odd pins bussed),SNAP-TEX-CBS6 (no bussing), or SNAP-HD-CBF6, depending on module. |
| Use with jumper straps | STRAP2Q, STRAP4Q |
| Relay contacts | SPDT (1 Form C) Typical life expectancy (Electrical): 1 x 10 ⁵ |

OPTO N N **SNAP TEX Cables and Breakout Boards**

SNAP-AIMA-HDB and SNAP-AIV-HDB Breakout Boards

SNAP-AIMA-HDB breakout board

SNAP-AIMA-HDB, SNAP-AIMA-HDB-FM, SNAP-AIV-HDB,

and **SNAP-AIV-HDB-FM** breakout boards are primarily designed for use with SNAP-AIMA-32, SNAP-AIMA-32-FM, SNAP-AIV-32, and SNAP-AIV-32-FM analog input modules, respectively. Each of these modules provides 32 input points. The breakout boards provide easy accessibility for wiring points to field devices. Use the SNAP-HD-BF6 cable for wiring connections between the module and the breakout board.

Note for the SNAP-AIMA-32 or SNAP-AIMA-32-FM: if you are using one of these modules with loop power (2-wire) devices, connect to the SNAP-AIMA-HDB or SNAP-AIMA-HDB-FM rack as shown on page 25. If you are using the SNAP-AIMA-32 (or -FM) with self-powered devices (4-wire), do not use the SNAP-AIMA-HDB (or -FM) boards, which have a current limiter. Instead, wire to the SNAP-AIV-HDB or SNAP-AIV-HDB-FM as shown on page 26 (negative common or page 27 (positive common).

CAUTION: We strongly recommend that you use a breakout board with the SNAP-AIMA-32 (or -FM) module. Without the board , miswiring of any point on the module can cause severe out-of-warranty damage. The breakout board protects the module from many wiring errors.

Working with Module Values

AIMA modules used with a SNAP-AIV-HDB board read normally. However, values on AIMA modules used with a SNAP-AIMA-HDB board are read as *negative values*. For example, a value of 10 mA on the module will be read as -10 mA. (Note: If no readings appear, try reversing field connections on the board.)

Because these readings are negative values, they can be confusing to work with. This section shows you how to easily change them to positive values or scale them to the positive readings you need. This section applies only with the SNAP-AIMA-HDB board.

Changing Negative to Positive Values

(SNAP-AIMA-HDB board only) To read positive values, when you configure points on the module, choose the scalable option and enter the corresponding positive values, like this:

| Name: Input_1 | | | |
|------------------|------------------|---------------|--------------------|
| escription: | | | |
| Type: | * | | |
| | | | |
| | MA-32: -20 - +20 | mA (Scalable) | • |
| | MA-32: -20 - +20 | | ▼ Scaling |
| Module: SNAP-All | MA-32: -20 - +20 | Actual: | Scaling Scaled: |
| Module: SNAP-All | | | Scaling |
| Module: SNAP-All | | Actual: | Scaling Scaled: |

This may seem odd, but it works. Don't be confused by the "Lower" and "Upper" labels for the values. Positive values sent to the module will be shown as the correct positive values within your PAC Control strategy.

Scaling Values

Similarly, if you need to scale values for your application, enter the positive values you need. The module's range is 4 to 20 mA. If you want 4 to represent 0 mA and 20 to represent 130 mA, for example, enter those values as shown below:

| Name: Input_1 | | | |
|----------------|------------------------------|--------------------|--------------------------|
| Description: | | | 1 |
| Type: Input | | | |
| Dec. Imput | | | |
| | MA-32: -20 - +20 | mA (Scalable) | - |
| | MA-32: -20 - +20 | | ⊂aling |
| Module: SNAP-A | MA-32: -20 - +20 Clamping | S Actual: | caling Scaled: |
| Module: SNAP-A | 1 | S Actual: mA | caling Scaled: [mA |
| Module: SNAP-A | 1 | S Actual: | caling Scaled: |

SNAP-AIMA-HDB Breakout Boards

Wiring diagram: SNAP-AIMA-HDB or SNAP-AIMA-HDB-FM board to SNAP-AIMA-32 or SNAP-AIMA-32-FM module

This diagram cannot be used with self-sourcing transmitters. Use this diagram only with loop power (2-wire) negative common devices . For self-powered (4-wire) devices, use a SNAP-AIV-HDB board and wiring diagram on page 26 (negative common devices) or page 27 (positive common devices).

4-20mA

See "Working with Module Values" on page 24.

SNAP-AIV-HDB Breakout Boards

Wiring diagram: SNAP-AIV-HDB or SNAP-AIV-HDB-FM board to SNAP-AIV-32 or SNAP-AIV-32-FM module

NOTE: Also use this diagram to wire the SNAP-AIV-HDB breakout rack to a SNAP-AIMA-32 or SNAP-AIMA-32-FM module, when the module connects to self-powered (4-wire) devices that share a negative common connection. (For positive common devices, use the diagram on page 27.) See the module's data sheet for more information.

V

More About Opto 22

Products

Opto 22 develops and manufactures reliable, flexible, easy-touse hardware and software products for industrial automation, energy management, remote monitoring, and data acquisition applications.

OptoEMU Energy Management System

The easy-to-use OptoEMU Sensor monitors electrical energy use in your facility and delivers detailed, real-time data you can see, analyze, and use in building and control systems. The Sensor can monitor energy data from pulsing meters, electrical panels or subpanels, and equipment. View energy data online using a software service or incorporate the data into your control system for complete energy management.

SNAP PAC System

Designed to simplify the typically complex process of selecting and applying an automation system, the SNAP PAC System consists of four integrated components:

- SNAP PAC controllers
- PAC Project[™] Software Suite
- SNAP PAC brains
- SNAP I/O<sup>^{*}
 </sup>

SNAP PAC Controllers

Programmable automation controllers

(PACs) are multifunctional, modular controllers based on open standards.

Opto 22 has been manufacturing PACs for over two decades. The standalone SNAP PAC S-series, the rack-mounted SNAP PAC R-series, and the software-based SoftPAC[™] all handle a wide range of digital, analog, and serial functions for data collection, remote monitoring, process control, and discrete and hybrid manufacturing.

SNAP PACs are based on open Ethernet and Internet Protocol (IP) standards, so you can build or extend a system easily, without the expense and limitations of proprietary networks and protocols. Wired+Wireless[™] models are also available.

PAC Project Software Suite

Opto 22's PAC Project Software Suite provides full-featured, cost-effective control programming, HMI (human machine interface) development and runtime, OPC server, and database connectivity software for your SNAP PAC System.

Control programming includes both easy-to-learn flowcharts and optional scripting. Commands are in plain English; variables and I/O point names are fully descriptive.

PAC Project Basic offers control and HMI tools and is free for download on our website, www.opto22.com. PAC Project Professional, available for separate purchase, adds one SoftPAC, OptoOPCServer, OptoDataLink, options for controller redundancy or segmented networking, and support for legacy Opto 22 serial *mistic*[™] I/O units.

SNAP PAC Brains

While SNAP PAC controllers provide central control and data distribution, SNAP PAC brains provide distributed intelligence for I/O processing and communications. Brains offer analog, digital, and serial functions, including thermocouple linearization; PID loop control; and optional high-speed digital counting (up to 20 kHz), quadrature counting, TPO, and pulse generation and measurement.

SNAP I/O

I/O provides the local connection to sensors and equipment. Opto 22 SNAP I/O offers 1 to 32 points of reliable I/O per module, depending on the type of module and your needs.

Analog, digital, and serial modules are all mixed on the same mounting rack and controlled by the same processor (SNAP PAC brain or rack-mounted controller).

Quality

Founded in 1974, Opto 22 has established a worldwide reputation for high-quality products. All are made in the U.S.A. at our manufacturing facility in Temecula, California. Because we test each product twice before it leaves our factory, rather than only testing a sample of each batch, we can guarantee most solid-state relays

and optically isolated I/O modules for life.

Free Product Support

Opto 22's California-based Product Support Group offers free, comprehensive technical support for Opto 22 products. Our staff of support engineers represents decades of training and experience. Support is available in English and Spanish by phone or email, Monday–Friday, 7 a.m. to 5 p.m. PST.

Additional support is always available on our website: how-to videos, OptoKnowledgeBase, self-training guide, troubleshooting and user's guides, and OptoForums.

In addition, hands-on training is available for free at our Temecula, California headquarters, and you can register online.

Purchasing Opto 22 Products

Opto 22 products are sold directly and through a worldwide network of distributors, partners, and system integrators. For more information, contact Opto 22 headquarters at 800-321-6786 or 951-695-3000, or visit our website at www.opto22.com.
