# Cree® XLamp® XP-G2 LEDs

XP-G2 Standard LED

**XP-G2 High Efficacy LED** 

#### PRODUCT DESCRIPTION

The original XLamp® XP-G2 LED pioneered a broad set of LED applications for the industry, including outdoor and area lighting, and has since served as a preferred choice by manufacturers that require advanced output, efficacy and optical control. The compact and proven 3.45-mm XP platform has an excellent ecosystem of optics and system solutions available, enabling lighting manufacturers to simplify their design process and shorten time to market.

XP-G2 LEDs are now available in two different White versions: Standard and High Efficacy (HE). XP-G2 Standard is the same breakthrough product that enabled a broad set of new LED applications for ceramic high-power LEDs.

The new High Efficacy version extends this legacy with a drop-in upgrade for existing designs optimized around XP-G2 LEDs. XP-G2 HE LEDs leverage Cree's latest high-power chip technology to deliver 25 percent more light output via a higher maximum current of 2000 mA, higher efficacy and lower thermal resistance.

#### **FEATURES**

- Available in white, outdoor white and 80-, 85- and 90-CRI white
- · ANSI-compatible chromaticity bins
- · Binned at 85 °C
- Maximum drive current: Standard: 1500 mA, HE: 2000 mA
- Low thermal resistance: Standard: 4 °C/W, HE: 3 °C/W
- Wide viewing angle: Standard: 120°, HE: 125°
- Unlimited floor life at ≤ 30 °C/85% RH
- · Reflow solderable JEDEC J-STD-020C
- Electrically neutral thermal path
- · RoHS and REACh compliant
- UL® recognized component (E349212)

#### **TABLE OF CONTENTS**

| Characteristics   | 3  |
|---|----|
| Flux Characteristics - High Efficacy  | 4  |

#### **CHARACTERISTICS**

| Characteristics  | Unit    | Minimum | Typical | Maximum |
|--|---------|---------|---------|---------|
| Thermal resistance, junction to solder point - High Efficacy | °C/W    |         | 3       |         |
| Thermal resistance, junction to solder point - Standard      | °C/W    |         | 4       |         |
| Viewing angle (FWHM) - High Efficacy                         | degrees |         | 125     |         |
| Viewing angle (FWHM) - Standard                              | degrees |         | 120     |         |
| Temperature coefficient of voltage - High Efficacy           | mV/°C   |         | -1.3    |         |
| Temperature coefficient of voltage - Standard                | mV/°C   |         | -1.8    |         |
| ESD withstand voltage (HBM per Mil-Std-883D)                 | ٧       |         |         | 8000    |
| DC forward current - High Efficacy                           | mA      |         |         | 2000    |
| DC forward current - Standard                                | mA      |         |         | 1500    |
| Reverse voltage  | V       |         |         | 5       |
| Forward voltage (@ 350 mA, 85 °C) - High Efficacy            | V       |         | 2.73    | 3       |
| Forward voltage (@ 350 mA, 85 °C) - Standard                 | V       |         | 2.8     | 3.15    |
| Forward voltage (@ 700 mA, 85 °C) - High Efficacy            | ٧       |         | 2.83    |         |
| Forward voltage (@ 700 mA, 85 °C) - Standard                 | ٧       |         | 2.9     |         |
| Forward voltage (@ 1000 mA, 85 °C) - High Efficacy           | ٧       |         | 2.90    |         |
| Forward voltage (@ 1000 mA, 85 °C) - Standard                | ٧       |         | 3.0     |         |
| Forward voltage (@ 1500 mA, 85 °C) - High Efficacy           | ٧       |         | 2.99    |         |
| Forward voltage (@ 1500 mA, 85 °C) - Standard                | ٧       |         | 3.1     |         |
| LED junction temperature                                     | °C      |         |         | 150     |

# FLUX CHARACTERISTICS - HIGH EFFICACY (T, = 85 °C)

The following table provides order codes for XLamp High-Efficacy XP-G2 LEDs. For a complete description of the order code nomenclature, please see the Bin and Order Code Formats section (page 31). For definitions of the chromaticity kits, please see the Cree's Standard Chromaticity Kits section (page 30).

| Chrom | naticity | Minimu | ım Luminous F<br>@ 350 mA | lux (lm)              |                      | Order Codes          |                      |

- Cree maintains a tolerance of ±7% on flux and power measurements, ±0.005 on chromaticity (CCx, CCy) measurements and a tolerance of ±2 on CRI measurements. See the Measurements section (page 33).
- Cree XLamp XP-G2 LED order codes specify only a minimum flux bin and not a maximum. Cree may ship reels in flux bins higher than
  the minimum specified by the order code without advance notice. Shipments will always adhere to the chromaticity bin restrictions
  specified by the order code.
- \* Flux values @ 25 °C are calculated and for reference only.

- Cree maintains a tolerance of ±7% on flux and power measurements, ±0.005 on chromaticity (CCx, CCy) measurements and a tolerance of ±2 on CRI measurements. See the Measurements section (page 33).
- Cree XLamp XP-G2 LED order codes specify only a minimum flux bin and not a maximum. Cree may ship reels in flux bins higher than the minimum specified by the order code without advance notice. Shipments will always adhere to the chromaticity bin restrictions specified by the order code.
- \* Flux values @ 25 °C are calculated and for reference only.

- Cree maintains a tolerance of ±7% on flux and power measurements, ±0.005 on chromaticity (CCx, CCy) measurements and a tolerance of ±2 on CRI measurements. See the Measurements section (page 33).
- Cree XLamp XP-G2 LED order codes specify only a minimum flux bin and not a maximum. Cree may ship reels in flux bins higher than the minimum specified by the order code without advance notice. Shipments will always adhere to the chromaticity bin restrictions specified by the order code.
- Flux values @ 25 °C are calculated and for reference only.

# FLUX CHARACTERISTICS - STANDARD (T, = 85 °C)

The following table provides order codes for XLamp Standard XP-G2 LEDs. For a complete description of the order code nomenclature, please see the Bin and Order Code Formats section (page 31). For definitions of the chromaticity kits, please see the Cree's Standard Chromaticity Kits section (page 30).

| Chrom | naticity | Minimur | n Luminous I<br>@ 350 mA | Flux (lm)             | Order Codes          |

- Cree maintains a tolerance of ±7% on flux and power measurements, ±0.005 on chromaticity (CCx, CCy) measurements and a tolerance of ±2 on CRI measurements. See the Measurements section (page 33).
- Cree XLamp XP-G2 LED order codes specify only a minimum flux bin and not a maximum. Cree may ship reels in flux bins higher than the minimum specified by the order code without advance notice. Shipments will always adhere to the chromaticity bin restrictions specified by the order code.
- Flux values @ 25 °C are calculated and for reference only.

#### **RELATIVE SPECTRAL POWER DISTRIBUTION**

## RELATIVE FLUX VS. JUNCTION TEMPERATURE (I<sub>E</sub> = 350 mA)

# ELECTRICAL CHARACTERISTICS - HIGH EFFICACY (T, = 85 °C)

## **ELECTRICAL CHARACTERISTICS - STANDARD (T, = 85 °C)**

# RELATIVE FLUX VS. CURRENT - HIGH EFFICACY (T, = 85 °C)

#### RELATIVE FLUX VS. CURRENT - STANDARD (T<sub>1</sub> = 85 °C)

## RELATIVE CHROMATICITY VS CURRENT AND TEMPERATURE - HIGH EFFICACY (WARM WHITE\*)

<sup>\*</sup> Warm White XLamp XP-G2 LEDs have a typical CRI of 80.

## RELATIVE CHROMATICITY VS CURRENT AND TEMPERATURE - STANDARD (WARM WHITE\*)

<sup>\*</sup> Warm White XLamp XP-G2 LEDs have a typical CRI of 80.

#### **TYPICAL SPATIAL DISTRIBUTION - HIGH EFFICACY**

#### **TYPICAL SPATIAL DISTRIBUTION - STANDARD**

#### **THERMAL DESIGN - HIGH EFFICACY**

The maximum forward current is determined by the thermal resistance between the LED junction and ambient. It is crucial for the end product to be designed in a manner that minimizes the thermal resistance from the solder point to ambient in order to optimize lamp life and optical characteristics.

#### **THERMAL DESIGN - STANDARD**

#### **PERFORMANCE GROUPS - LUMINOUS FLUX**

XLamp XP-G2 LEDs are tested for luminous flux and placed into one of the following luminous-flux groups:

| Group Code | Minimum Luminous Flux<br>(lm) @ 350 mA | Maximum Luminous Flux<br>(lm) @ 350 mA |  |  |
|------------|--|--|--|--|
| P2         | 67.2                                   | 73.9                                   |  |  |

#### **BIN AND ORDER CODE FORMATS**

XP-G2 bin codes and order codes are configured in the following manner:

#### **REFLOW SOLDERING CHARACTERISTICS**

In testing, Cree has found XLamp XP-G2 LEDs to be compatible with JEDEC J-STD-020C, using the parameters listed below. As a general guideline, Cree recommends that users follow the recommended soldering profile provided by the manufacturer of the solder paste used, and therefore it is the lamp or luminaire manufacturer's responsibility to determine applicable soldering requirements.

Note that this general guideline may not apply to all PCB designs and configurations of reflow soldering equipment.

IPC/JEDEC J-STD-020C

| Profile Feature   | Lead-Free Solder |
|---|------------------|
| Average Ramp-Up Rate $(Ts_{max} to T_p)$                | 1.2 °C/second    |
| Preheat: Temperature Min (Ts <sub>min</sub> )           | 120 °C           |
| Preheat: Temperature Max (Ts <sub>max</sub> )           | 170 °C           |
| Preheat: Time (ts <sub>min</sub> to ts <sub>max</sub> ) | 65-150 seconds   |
| Time Maintained Above: Temperature (T <sub>L</sub> )    | 217 °C           |
| Time Maintained Above: Time (t <sub>L</sub> )           | 45-90 seconds    |
| Peak/Classification Temperature (Tp)                    | 235 - 245 °C     |
| Time Within 5 °C of Actual Peak Temperature (tp)        | 20-40 seconds    |
| Ramp-Down Rate  | 1 - 6 °C/second  |
| Time 25 °C to Peak Temperature                          | 4 minutes max.   |

Note: All temperatures refer to topside of the package, measured on the package body surface.

#### **NOTES**

#### Measurements

The luminous flux, radiant power, chromaticity, forward voltage and CRI measurements in this document are binning specifications only and solely represent product measurements as of the date of shipment. These measurements will change over time based on a number of factors that are not within Cree's control and are not intended or provided as operational specifications for the products. Calculated values are provided for informational purposes only and are not intended or provided as specifications.

#### **Pre-Release Qualification Testing**

Please read the LED Reliability Overview for details of the qualification process Cree applies to ensure long-term reliability for XLamp LEDs and details of Cree's pre-release qualification testing for XLamp LEDs.

#### **Lumen Maintenance**

Cree now uses standardized IES LM-80-08 and TM-21-11 methods for collecting long-term data and extrapolating LED lumen maintenance. For information on the specific LM-80 data sets available for this LED, refer to the public LM-80 results document.

Please read the Long-Term Lumen Maintenance application note for more details on Cree's lumen maintenance testing and forecasting. Please read the Thermal Management application note for details on how thermal design, ambient temperature, and drive current affect the LED junction temperature.

#### **Moisture Sensitivity**

Cree recommends keeping XLamp LEDs in the provided, resealable moisture-barrier packaging (MBP) until immediately prior to soldering. Unopened MBPs that contain XLamp LEDs do not need special storage for moisture sensitivity.

Once the MBP is opened, XLamp XP-G2 LEDs may be stored as MSL 1 per JEDEC J-STD-033, meaning they have unlimited floor life in conditions of  $\leq$  30 °C/85% relative humidity (RH). Regardless of the storage condition, Cree recommends sealing any unsoldered LEDs in the original MBP.

#### **RoHS Compliance**

The levels of RoHS restricted materials in this product are below the maximum concentration values (also referred to as the threshold limits) permitted for such substances, or are used in an exempted application, in accordance with EU Directive 2011/65/EC (RoHS2), as implemented January 2, 2013. RoHS Declarations for this product can be obtained from your Cree representative or from the Product Ecology section of the Cree website.

#### REACh Compliance

REACh substances of very high concern (SVHCs) information is available for this product. Since the European Chemical Agency (ECHA) has published notice of their intent to frequently revise the SVHC listing for the foreseeable future, please contact a Cree representative to insure you get the most up-to-date REACh Declaration. REACh banned substance information (REACh Article 67) is also available upon request.

#### **NOTES - CONTINUED**

#### **UL® Recognized Component**

This product meets the requirements to be considered a UL Recognized Component with Level 4 enclosure consideration. The LED package or a portion thereof has been investigated as a fire and electrical enclosure per ANSI/UL 8750.

#### **Vision Advisory**

WARNING: Do not look at an exposed lamp in operation. Eye injury can result. For more information about LEDs and eye safety, please refer to the LED Eye Safety application note.

# MECHANICAL DIMENSIONS ( $T_A = 25$ °C)

Thermal vias, if present, are not shown on these drawings.

#### All measurements are ±.13 mm unless otherwise indicated.

# MECHANICAL DIMENSIONS ( $T_A = 25$ °C) - CONTINUED

- Cree recommends using thermal pad kickouts to maximize component thermal performance.
- Cree recommends using white solder mask material to minimize system optical loss.
- \* This stencil has been tested and optimized for the avoidance of voiding when using ALPHA® LUMET® P30 Maxrel solder paste. For other solder pastes, a "window pane" design for the thermal pad stencil may result in a lower voiding percentage. Contact your local Cree Field Applications Engineer for consultation regarding your specific application.

# CREE 💠

#### **TAPE AND REEL**

All Cree carrier tapes conform to EIA-481D, Automated Component Handling Systems Standard.

All dimensions in mm.

| Ao  | 3.70  | +/- 0.1   |
|-----|-------|-----------|
| Во  | 3.70  | +/- 0.1   |
| Ко  | 2.40  | +0.0/-0.1 |
| F   | 5.50  | +/- 0.05  |
| P 1 | 8.00  | +/- 0.1   |
| W   | 12.00 | +0.3/-0.1 |

- Measured from centerline of sprocket hole to centerline of pocket.
- Cumulative tolerance of 10 sprocket holes is  $\pm 0.20$ .
- (III) Measured from centerline of sprocket hole to centerline of pocket.
- (IV) Other material available.
