

## Low wear on all shafts: The Marathon Runner – iglidur® W300

**Over 400 sizes available from stock**

**For especially long service life**

**Low coefficient of friction**

**Extremely high wear resistance**

**Also suitable for soft shafts**

**Resistant to dirt**

# iglidur® W300 | The Marathon Runner

**Low wear on all shafts.** The iglidur® W300 material gives excellent wear resistance, even in harsh environments or when used with rough shafts. Of all iglidur® materials, iglidur® W300 is the most resistant to these conditions.

For especially high service life

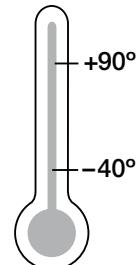

Low coefficient of friction

Extremely high wear resistance

Also suitable for soft shafts

Resistant to dirt

## Temperature

## When to use it?

- When especially high service life is necessary
- When low coefficients of dynamic friction and high wear resistance are needed
- For use on 303 stainless steel shafts
- For harsh environments and very rough shafts
- Dirt resistant

## When not to use it?

- For high loads starting at 50 MPa
  - ▶ iglidur® Q, page 541
- When temperatures are constantly above +90 °C
  - ▶ iglidur® H, page 353
  - ▶ iglidur® X, page 173
- For very wet environments
  - ▶ iglidur® P, page 195
- When an economical bearing is required
  - ▶ iglidur® G, page 81

## Product range

3 types  
> 400 dimensions  
Ø 2–120 mm

## Typical sectors of industry and application areas

- Automation ● Printing industry
- Woodworking ● Mechatronics
- Test engineering and quality assurance etc.

Surface resistance	Ω	> 10 <sup>12</sup>	DIN 53482

Table 01: Material properties table

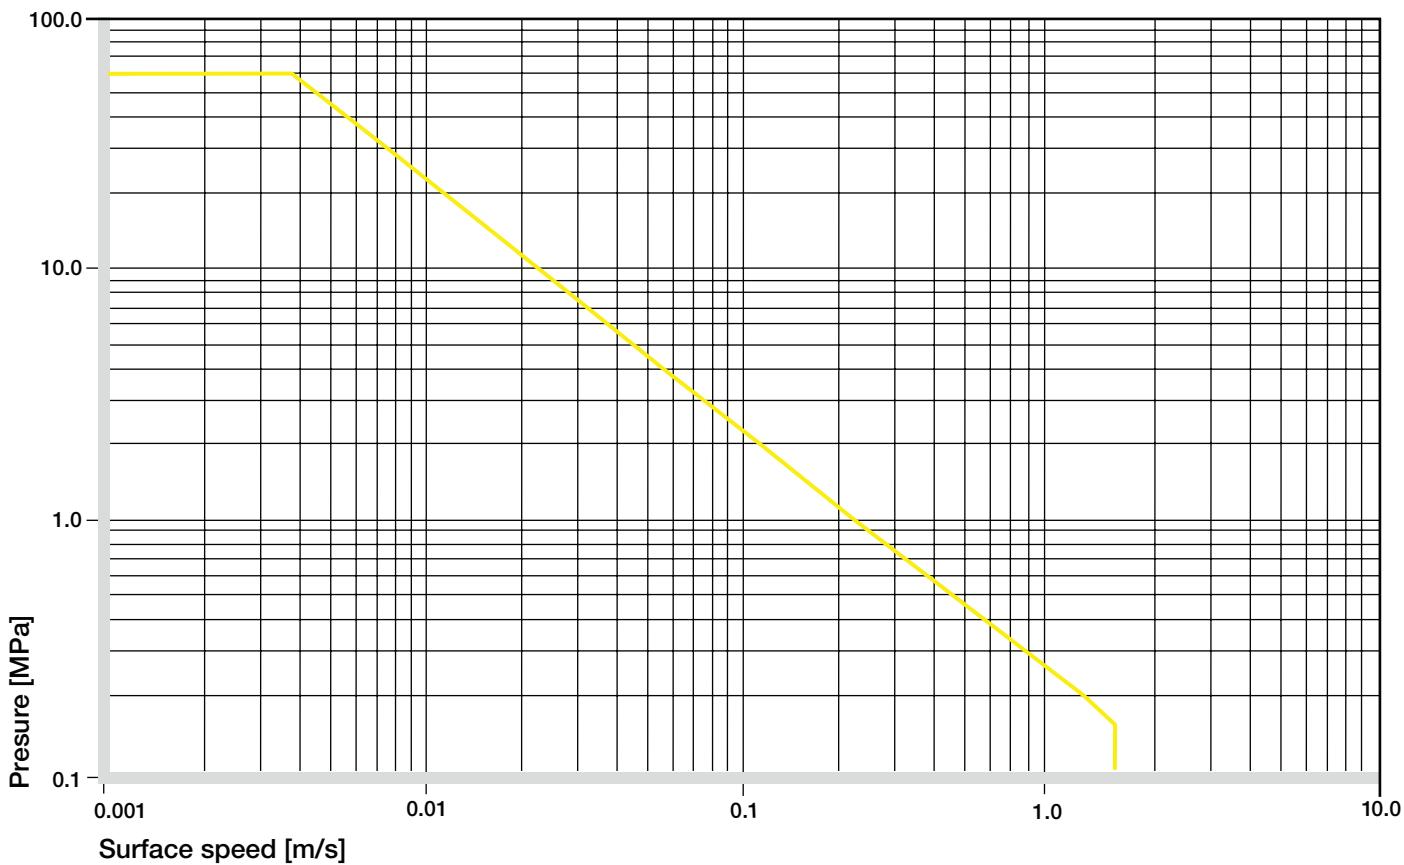

Diagram 01: Permissible pv values for iglidur® W300 with a wall thickness of 1 mm dry running against a steel shaft at +20 °C, mounted in a steel housing

iglidur® W300 gives excellent wear resistance, even in harsh environments or when used with rough shafts. This material is the most tolerant of these external effects out of all the iglidur® range.

## Mechanical Properties

With increasing temperatures, the compressive strength of iglidur® W300 plain bearings decreases. The Diagram 02 shows this inverse relationship. However, at the longterm maximum temperature of +90 °C the permissible surface pressure is almost 30 MPa. The recommended maximum surface pressure is a mechanical material parameter. No conclusions regarding the tribological properties can be drawn from this.

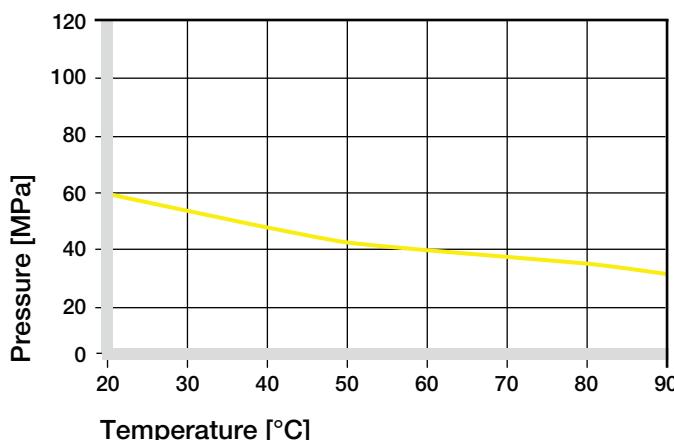

Diagram 02: Recommended maximum surface pressure as a function of temperature (60 MPa at +20 °C)

iglidur® W300 presents a very high compression strength in spite of its high elasticity. Diagram 03 shows the elastic deformation of iglidur® W300 under radial loads. At the recommended maximum surface pressure of 60 MPa, the deformation at room temperature is less than 3 %. Below the recommended maximum surface pressure of 60 MPa the deformation at room temperature is virtually zero.

► Surface Pressure, page 63

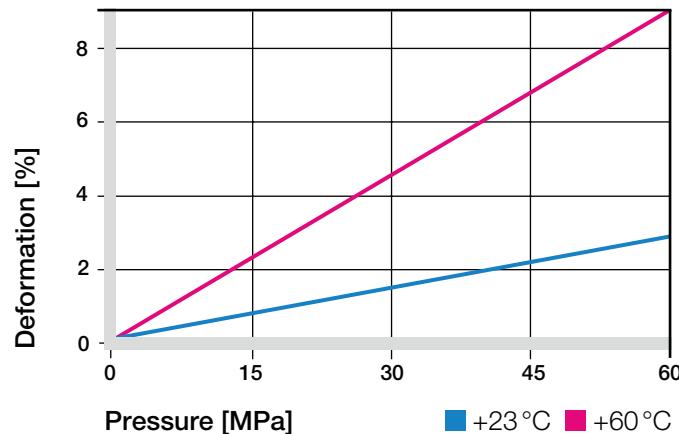

Diagram 03: Deformation under pressure and temperature

## Permissible Surface Speeds

Even at higher surface speeds, the coefficients of friction for iglidur® W300 do not increase. Therefore, compared to other materials, higher surface speeds can be obtained, for example, up to 1.5 m/s rotating and up to 5 m/s linear. The bearing wear remains low when used for long periods at high speeds, due to exceptional wear resistance. Relatively high speeds can be obtained with iglidur® W300 bearings on hardened shafts with the recommended surface finish.

► Surface Speed, page 65

m/s	Rotating	Oscillating	Linear
Continuous	1	0.7	4
Short term	2.5	1.8	6

Table 02: Maximum surface speeds

## Temperatures

iglidur® W300 plain bearings show minimal reaction to environmental effects. This also applies to temperatures. iglidur® W300 bearings maintain their exceptional wear resistance even up to the highest permissible application temperatures and at the same time resist becoming brittle at low temperatures.

► Application Temperatures, page 66

iglidur® W300	Application temperature
Minimum	-40 °C
Max. long term	+90 °C
Max. short term	+180 °C
Add. securing is required from	+60 °C

Table 03: Temperature limits

# iglidur® W300 | Technical Data

## Friction and Wear

Similar to wear resistance, the coefficient of friction  $\mu$  also changes with the load. In contrast to other iglidur® materials, the coefficient of friction of iglidur® W300 remains consistently low at higher rotational speeds.

- Coefficients of Friction and Surfaces, [page 68](#)
- Wear Resistance, [page 69](#)

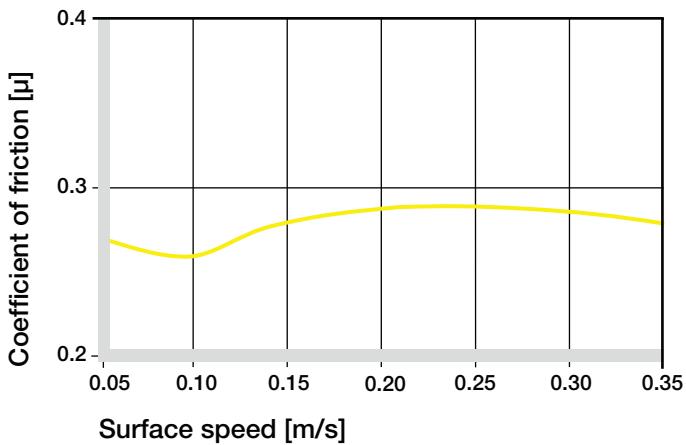

Diagram 04: Coefficient of friction as a function of the running speed,  $p = 0.75 \text{ MPa}$

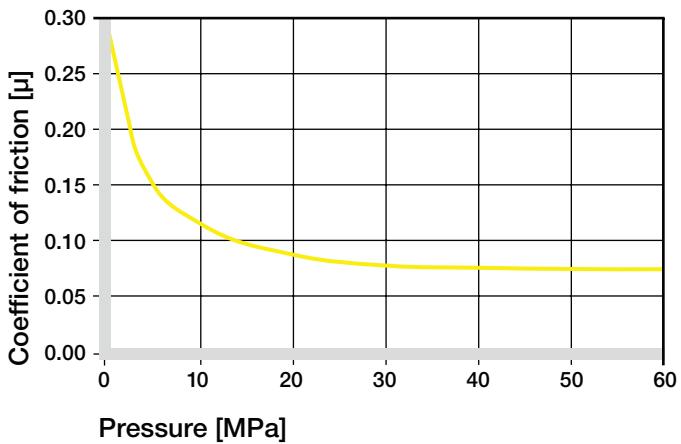

Diagram 05: Coefficient of friction as a function of the pressure,  $v = 0.01 \text{ m/s}$

## Shaft Materials

Friction and wear are to a large extent also highly dependant on the shaft materials. Shafts that are too smooth increase both the coefficient of friction and the wear of the bearing. Smooth shafts have the danger of stick slip. Squeaking as an effect of stick slip is usually the result of shafts that are too smooth.

For the lowest coefficients of friction when using iglidur® W300 plain bearings, the surfaces should not be too smooth. Shaft roughnesses of 0.4 to 0.5  $\mu\text{m}$  have proven to be the best (see Diagram 06). Tests with iglidur® W300 have shown the wear resistance at this roughness is very high, while the friction reduces to the lowest value.

Diagrams 07 to 09 show results of testing different shaft materials with iglidur® W300 plain bearings. For rotational applications with low loads, the wear varies according to the shaft material. iglidur® W300 provides very good to acceptable coefficients of friction for all shafts that were tested. For small radial loads with hard chromed shafts and/or shafts made of stainless steel, iglidur® W300 is the most suitable iglidur® material. The soft shaft materials HR carbon steel and free-machining steel are not as well suited to iglidur® W300 plain bearings. Hardened shafts are preferred for applications for higher loads. Diagram 08 clearly shows the difference in materials for increasing loads. A similar picture emerges for oscillating applications. First, for low loads, the wear for the oscillating movement lies below that of a rotation at the same load.

For higher loads, the situation changes. If the shaft material you plan to use is not contained in this list, please contact us.

## Additional Properties

### Chemical Resistance

iglidur® W300 plain bearings have a good resistance to chemicals. They are resistant to most lubricants. iglidur® W300 is not attacked by most weak organic or inorganic acids.

► Chemical Table, page 1258

Medium	Resistance
Alkohole	+ to 0
Hydrocarbons	+
Greases, oils without additives	+
Fuels	+
Diluted acids	0 to –
Strong acids	–
Diluted alkalines	+
Strong alkalines	0

+ resistant 0 conditionally resistant – not resistant

All data given at room temperature [ $+20^\circ\text{C}$ ]

Table 05: Chemical resistance

### Radiation Resistance

Plain bearings made from iglidur® W300 are resistant to radiation up to an intensity of  $3 \cdot 10^2 \text{ Gy}$ .

### UV Resistance

iglidur® W300 plain bearings are permanently resistant to UV radiation. A slight change in colour (dark coloration) due to UV radiation and other weathering effects will not significantly influence the mechanical, electrical or thermal properties.

### Vacuum

In a vacuum, iglidur® W300 plain bearings will outgas any moisture that may have been absorbed. The use of iglidur® W300 in a vacuum environment is only possible to a limited extent.

# iglidur® W300 | Technical Data

## Electrical Properties

iglidur® W300 plain bearings are electrically insulating.	
Specific volume resistance	> $10^{13}$ $\Omega\text{cm}$
Surface resistance	> $10^{12}$ $\Omega$

## Moisture Absorption

The moisture absorption of iglidur® W300 plain bearings is approximately 1.3 % weight in the standard atmosphere. The maximum water absorption is 6.5 %. This must be taken into account along with other environmental influences.

### Maximum moisture absorption

At +23 °C/50 % r.h.	1.3 % weight
Max. water absorbtion	6.5 % weight

Table 06: Moisture absorption

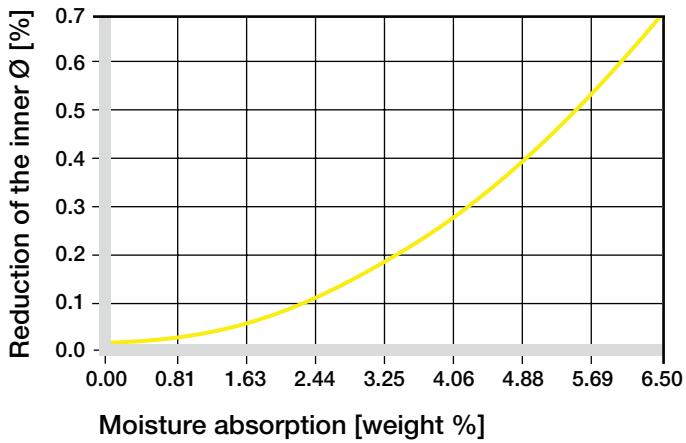

Diagram 10: Effect of moisture absorption on plain bearings

## Installation Tolerances

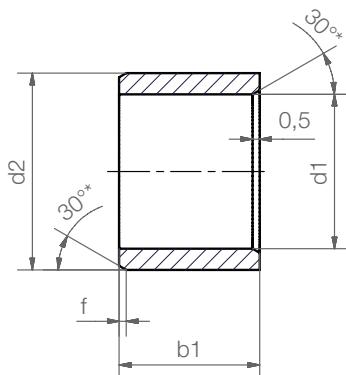

iglidur® W300 plain bearings are standard bearings for shafts with h-tolerance (recommended minimum h9). The bearings are designed for pressfit into a housing machined to a H7 tolerance. After being assembled into a nominal size housing, in standard cases the inner diameter automatically adjusts to the E10 tolerances. For particular dimensions the tolerance differs depending on the wall thickness (please see product range table).
