Description

The TP167X series amplifiers are newest high supply voltage amplifiers with low offset, low power and stable high frequency response. They incorporate 3PEAK's proprietary and patented design techniques to achieve very good AC performance with 7MHz bandwidth, 20V/ μs slew rate and low distortion while drawing only 850 μA of quiescent current per amplifier. The TP167X family can be used as plug-in replacements for many commercially available op-amps to reduce power and improve input/output range and performance.

The combination of features makes the TP167X ideal choices for industrial control, motor control and portable audio amplification, sound ports, and other consumer Audio.

Applications

- Active Filters, ASIC Input or Output Amplifier
- Motor Control
- Industrial Control
- Audio

Absolute Maximum Ratings ^{Note 1}

Parameters	Rating
Supply Voltage, ($+V_S$) – ($-V_S$)	16 V
Input Voltage	($-V_S$) – 0.3 to ($+V_S$) + 0.3
Differential Input Voltage	± 0.7V
Input Current: +IN, –IN ^{Note 2}	± 10mA
Output Short-Circuit Duration ^{Note 3}	Infinite
Maximum Junction Temperature	150°C
Operating Temperature Range	–40 to 125°C
Storage Temperature Range	–65 to 150°C
Lead Temperature (Soldering, 10 sec)	260°C

Note 1: Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. Exposure to any Absolute Maximum Rating condition for extended periods may affect device reliability and lifetime.

Note 2: The inputs are protected by ESD protection diodes to each power supply. If the input extends more than 300mV beyond the power supply, the input current should be limited to less than 10mA.

Note 3: A heat sink may be required to keep the junction temperature below the absolute maximum. This depends on the power supply voltage and how many amplifiers are shorted. Thermal resistance varies with the amount of PC board metal connected to the package. The specified values are for short traces connected to the leads.
