Table of contents

Connection technology from Phoenix Contact

4

Implement your individual connection for field cabling with the expertise of Phoenix Contact

Product range overview

6

The illustrated table of contents will help you find the right product more quickly.

Connectors

M5 to M12 sensor/actuator connectors, M17 to M58 power connectors, valve connectors

13

Sensor/actuator cabling

Sensor/actuator cables in M5 to M40, connectors and boxes in M5 to M12, with SPEEDCON fast locking system as an option. M17 to M40

169

Data connectors and cables

Connectors, flush-type connectors, and cables for fieldbuses and networks: M8, M12, 7/8", RJ45, SC-RJ, D-SUB, and USB.

319

Installation systems

Panel feed-throughs, cable connectors, connectors, and distributors with QUICKON fast connection technology for easy installation.

451

Heavy-duty connectors

HEAVYCON heavy-duty connectors for signal and power transmission. DUPLICON stackable connectors for flexible power distribution.

479

Installation and mounting material

CES cable entry system for space-saving feed-through, plug assembly frames, cable glands, and service interfaces.

667

Charging connectors

Charging systems for E-Mobility up to 400 A and connectors for power electronics up to 150 A.

713

Technical information

728

General information on the degree of protection, properties of plastics, approvals, insulation coordination, etc.

Sensor/actuator cabling and industrial connectors

Connection technology from Phoenix Contact

Screw connection

The screw connection is the most universal and globally accepted conductor connection technology. An important characteristic is the maintenance-free conductor contact. It is not necessary to tighten the terminal screw again. All kinds of copper cables can be clamped without pretreatment, thereby making gas-tight and reliable contact. The wire protector, which protects the individual litz wires from damage, is located between the screw and the conductor. It also performs a screw locking function to prevent release due to vibrations and temperature fluctuations. Splicing protection can be implemented in the form of ferrules. With a screw connection, several wires may also be clamped under one screw. The current-carrying parts of the screw connections are made of high-grade, strain-crack, and corrosion-proof copper alloys.

Axial screw connection

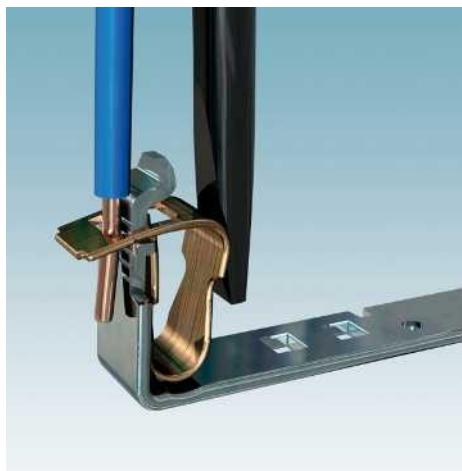

With this method, the wire end to be contacted is guided into the connection area of the pin or socket contact. A cone-shaped prong (part of the contact) is then screwed into the stranded wire from the front. The strands of the wire are radially pressed against the contact wall. This results in a gas-tight connection with long-term stability between the wire and contact. It is important that the specified tightening torque is observed. The prong is pressed in using a hexagon key which is applied to the front of the contact. This connection technology combines the advantages of screw and crimp connection. It requires very little space, is easy to execute, and only requires a standard Allen key.

Crimp connection

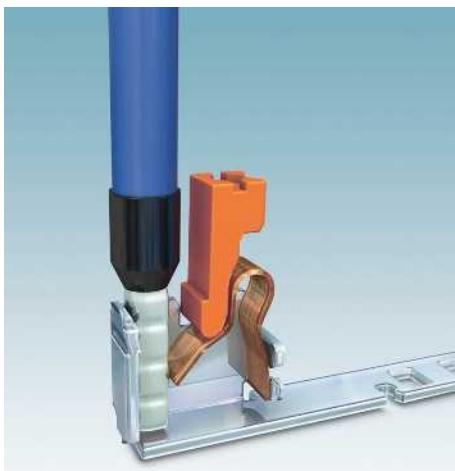

The crimp connection impresses with its small space requirements and its cost-effective creation in series production. For a reliable connection, it is essential that the conductor cross section, the crimp contact, and the crimping tool are compatible. Furthermore, the crimping process must be monitored during large-scale production as the crimping tools are subject to a certain degree of wear.

Crimp connections can be established with the aid of crimping pliers or crimp machines through specific deformation of the crimping ranges of the contact. The requirements for crimp connections are defined in DIN EN 60352-2. Proof of the quality of a crimp connection can be seen in the tensile strength of the connection and crack-free deformation of the crimp contact. Crimping must not result in impermissible elongation of crimp contacts, as this would prevent them from latching correctly in the contact carrier. The contact is released using an unlocking tool. Assembly tools are also available for very thin conductors.

Spring connection

The spring connection contains a steel spring which pushes the stripped conductor against a busbar. The terminal point is opened with a standard screwdriver. After the conductor has been inserted into the clamping space, the screwdriver is removed and the conductor automatically makes contact. The contact force is independent of the user and a vibration-proof, gas-tight connection with long-term stability is established. The front connection provides an additional advantage. The conductor and screwdriver come in parallel from the same direction and are always within the user's field of vision. Contact inserts can thereby also be connected or re-wired even when mounted. All kinds of copper cables can be clamped without pretreatment, thereby making gas-tight and reliable contact. Splicing protection can also be implemented in the form of a ferrule.

Push-in connection

Stranded conductors with ferrules or solid conductors can be quickly and easily inserted directly into the connection without tools. The contact spring is formed in such a way that it opens automatically when the conductor is pushed in and thereby provides the required pressure force against the current bar for a gas-tight, vibration and shock-proof connection. With the aid of the orange pusher, the terminal block can be opened manually so that conductors with smaller cross sections can also be securely connected. To release the conductor, the orange pusher features a confusion-free and defined operating element. The conductive metals are made from high-grade copper alloys. All metal parts of the connection are made of corrosion-resistant materials.

QUICKON fast connection for single wires

The QUICKON connection is equipped with an IDC insulation displacement contact. The term "IDC" stands for Insulation Displacement Connection. With this connection method, a non-stripped wire with insulation is positioned in front of the gap of the insulation displacement contact and then pushed into the blade gap through insulation displacement. In so doing, the wire insulation is severed and a gas-tight contact is made between the wire and the contact. This can save at least 60% of connection time.

The connection force is independent of the user and completely reliable provided the permitted conductor cross sections and connection conditions are observed. Solid and stranded conductors can be rewired up to 10 times. However, the wire end should be cut off before connecting again.

QUICKON connections have proven themselves in numerous applications for Phoenix Contact over recent years, such as connectors, for COMBICON, and modular terminal blocks to CEE plug-in equipment from 0.14 to 6.0 mm².

Connectors

PLUSCON circular is the range of circular connectors for use in industrial automation. The sizes available range from M5, M8, and M12 through M17 and M23 to M40 and M58 connectors. The latter are used exclusively to transmit electrical power up to 150 A at 630 V per contact feed-through. The complete range covers the entire scope of circular connectors for industrial applications.

Sensor/actuator connectors

Safe and efficient assembly is of utmost importance in field wiring. You can choose from all connection technologies, enabling you to precisely adapt to the relevant application or requirements in the field. The connectors for assembly are available in various versions, unshielded and EMC-compliant.

Sensor/actuator device connectors

A comprehensive range of device connectors and panel feed-throughs has emerged as a result of the various requirements for device connection technology in industrial environments. Customer-specific developments enable optimum adaptation to individual device concepts.

Signal, feedback, hybrid, and power connectors

The product portfolio for M17 to M58 connectors covers all common applications in industrial environments for signal, hybrid, and power plug-in connections up to 630 V/150 A. This also includes requirements relating to tightness of seal, vibration resistance, and shielding against EMI. The circular connector range is rounded off with a complete portfolio of plastic molded connectors.

Sealing elements

During transport or in the field, unoccupied plug-in connections must be protected or closed. The screw plugs, sealing caps and closing caps made of plastic or metal are suitable for this purpose. These achieve the IP65/IP67 as well as IP69K degrees of protection.

Sealing elements with holding band or fixing chain

All IP67 interfaces can be closed tightly using the screw plugs and sealing caps in the sizes M8, M12, and 7/8". The holding bands are fastened on the cable or the housing and are thus held captive.

The M12 metal protective cap with fixing chain is suitable for all pin versions. It is used in harsh industrial environments or for EMC applications.

Accessories

Accessories for device connectors

Special fixing nuts are available for EMC-compliant installation of M12 device connectors for coated or painted housing surfaces. When tightened they cut through the surface coating and establish contact between the housing and the connector.

Flat seals can be used as an alternative option between the housing wall and the device connector. Flat seals are to be preferred for thin walls, as the housing cutouts do not have to be chamfered.

Assembly tools for sensor/actuator cables

To achieve tight plug-in connections, we recommend using assembly tools. M12 and 7/8" circular connectors can be assembled using a torque screwdriver and plug attachment.

The benefits of the plug attachment become particularly clear when connecting the connectors to the distributor boxes. Thanks to the open design, it enables quick adjustment and installation even when space is at a premium.

The version for M12 connectors with hexagonal stainless steel knurl is also made from stainless steel. This prevents the connector knurls from being contaminated by corrosive materials.

For greater flexibility, screwdrivers with adjustable torque are also available. When used in conjunction with the adapter insert, they can also be used to accommodate the available plug attachments.

¹⁾ The effective current carrying capacity must be determined using a derating curve, if necessary, according to the application.

²⁾ The values specified assume that the connector pair is correctly locked and is only disconnected for testing and maintenance purposes. If the connector is unlocked and exposed to ambient conditions, and if there is a danger of pollution, the connector must be sealed using a protective cap ≥ IP54.

³⁾ The cable clamping areas specified on the following pages may vary depending on the cable material/structure. Selection and testing is the responsibility of the user.

17-pos. Crimp		

Note:

The connectors can be fitted with pin or socket contacts according to the application.

For safety reasons, only socket contacts may be used in the live part of the connector.

Connectors

M17 - signal connectors

Selection guide

M17 signal connectors, 8 and 17-pos., crimp ranges: 0.06 mm² to 1.0 mm²

- Cable connectors
- Coupler connectors
- Device connectors (device flanges)
The connectors are supplied fully assembled and are complemented by the respective crimp contacts.

Each housing type can be fitted with pin or socket contacts.

Connectors with knurled nuts can be equipped with SPEEDCON fast locking system or with M17 x 1 coarse-pitch thread as an option. The connectors with external thread are fully compatible with standard threads and the SPEEDCON fast locking system.

The product chart provides an overview of the available components.

Connectors

M17 - signal connectors

Crimp contacts, punched-rolled

C-HC® are punched-rolled contacts.
They are designed for high
insertion/withdrawal cycles.

The contacts are available taped on rolls
for manual or automatic processing.

Note: depending on the litz wire used,
the connection cross sections (crimp
ranges) may deviate from the listed values.
For reasons of safety, only socket contacts
may be used in the live part of the
connector.

Crimping tools

Crimp contacts, turned

M17 signal connectors are fitted with contacts with Ø 1.0 mm or Ø 0.6 mm depending on the number of positions.
 – 8-pos. versions: contacts with Ø 1.0 mm
 – 17-pos. versions: contacts with Ø 0.6 mm

Note:

Depending on the litz wire used, the connection cross sections (crimp ranges) can differ from the values mentioned below.

Notes:

Every connector housing type can be equipped with pin or socket contacts.

For reasons pertaining to safety, only socket contacts may be used in the live part of the connector.

Connectors

M23 - signal connectors

Mechanical and electrical data

Mechanical data

Housing material:	Copper zinc alloy (CuZn), die-cast zinc (GD-Zn)
Housing surface:	Nickel-plated/thick layer passivated (can be coated)
Insulating body:	Thermoplastic polyester (PBT), polyamide (PA 66)
Contact material:	Copper zinc alloy (CuZn)
Contact surface:	Nickel-plated (Ni) with gold coating (Au)
Contact connection method:	Solder cup, crimp, solder-in pin
Sealing and O-ring:	NBR
Flat gasket:	NBR, fiber-reinforced NBR
Temperature range:	-40°C ... +125°C
Cable entry:	Cable and coupler connectors for a cable outside diameter of 3 - 14.5 mm, shielded
Type of locking:	M23 SPEEDCON fast locking system, cable connector with M23 x 1 coarse-pitch thread as an option
Mech. insertion/withdrawal cycles:	Standard: 100, punched-rolled C-HC crimp contacts: up to 500
Protection class:	IP67 when locked

Cable clamping area ³⁾ Max. Ø [mm]	14.5	14.5	14.5	14.5	14.5	14.5	14.5

¹⁾ The effective current carrying capacity must be determined using a derating curve, if necessary, according to the application.

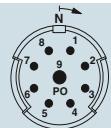

²⁾ The values specified assume that the connector pair is correctly locked and is only disconnected for testing and maintenance purposes. If the connector is unlocked and exposed to ambient conditions, and if there is a danger of pollution, the connector must be sealed using a protective cap ≥ IP54.

³⁾ The cable clamping areas specified on the following pages may vary depending on the cable material/structure. Selection and testing is the responsibility of the user.

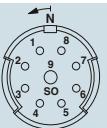

Note:

Unlike plug-in devices, connectors may only be inserted or removed when disconnected from the power.

Selection guide

M23 signal connectors

6- to 19-pos., up to 20 A/300 V, solder, crimp, and solder-in connection.

- Cable connectors
- Coupler connectors
- Device connectors (device flanges)

In the case of crimp connection, the respective crimp contacts must be added depending on the connection cross section.

Each housing type can be fitted with pin or socket contacts. The product chart provides an overview of the available components.

	Connector type	
Shielded	Cable connectors SPEEDCON fast locking system, see page 78.  	M23 x 1 standard interlocking, see page 79.
Shielded	Coupler connectors See page 80.

Connectors

M23 - feedback connectors

Mechanical and electrical data

Mechanical data

Housing material:	Copper zinc alloy (CuZn), die-cast zinc (GD-Zn)
Housing surface:	Nickel-plated/thick layer passivated (can be coated)
Insulating body:	Polyamide (PA 66)
Contact material:	Copper zinc alloy (CuZn)
Contact surface:	Nickel-plated (Ni) with gold coating (Au)
Contact connection method:	Crimp version
Sealing and O-ring:	Fluorocarbon rubber (FKM)
Ambient temperature:	-40°C ... 125°C
Cable entry:	Cable and coupler connectors for a cable outside diameter of 3 ... 14.5 mm, shielded
Type of locking:	M23 SPEEDCON screw locking, cable connector with M23 x 1 coarse-pitch thread as an option
Mech. insertion/withdrawal cycles:	Standard: 100, punched-rolled C-HC crimp contacts: up to 500
Protection class:	IP67 when locked

Electrical data

Number of positions

	12	17
Contacts	12	17
Contact Ø [mm]	1	1
Litz wire cross section, crimp contacts turned [mm ²]	0.08 ... 1.0	0.08 ... 1.0
Litz wire cross section, C-HC crimp contacts punched-rolled [mm ²]	0.06 ... 0.56	0.06 ... 0.56
Cable clamping area Max. Ø [mm]	14.5	14.5
Nominal current per contact at 25°C ¹⁾ [A]	8	8
Specifications according to DIN EN 61984:2009		
Rated voltage [V AC/DC]	150	100
Test/surge voltage [kV]	2.5	1.5
Surge voltage category	III	III
Pollution degree ²⁾	3	3
Installation height [m]	Up to 3000	Up to 3000
Cable clamping area ³⁾ Max. Ø [mm]	14.5	14.5

1) The effective current carrying capacity must be determined using a derating curve, if necessary, according to the application.

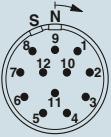

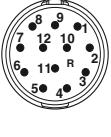

2) The values specified assume that the connector pair is correctly locked and is only disconnected for testing and maintenance purposes. If the connector is unlocked and exposed to ambient conditions, and if there is a danger of pollution, the connector must be sealed using a protective cap ≥ IP54.

3) The cable clamping areas specified on the following pages may vary depending on the cable material/structure. Selection and testing is the responsibility of the user.

Note:

Unlike plug-in devices, connectors may only be inserted or removed when disconnected from the power.

Pin assignments and coding

Contact chamber numbering (view of plug-in side)				
Number of positions	Pin	Socket	Pin	Socket
12-pos. N-coding Crimp				
17-pos. N-coding Crimp				

Note:

Standard coding is "N". Other codings and numbers of positions available on request.

The connectors can be fitted with pin or socket contacts according to the application.

For safety reasons, only socket contacts may be used in the live part of the connector.

Connectors

M23 - feedback connectors

Selection guide

M23 signal connectors

12/17-pos., N-coding, up to 8 A/150 V,
crimp ranges up to 1 mm²

- Cable connectors
- Coupler connectors
- Device connectors (device flanges)

Crimp contacts must be ordered
separately depending on the connection
cross section.

Each housing type can be fitted with pin
or socket contacts.

The connectors can be supplied with
clockwise or counter-clockwise contact
chamber numbering.

N (0°) and S (20°, on request) coding
positions are possible.

The product chart provides an overview
of the available components.

Connectors

M23 - feedback connectors

Crimp contacts, punched-rolled

C-HC® are punched-rolled contacts.
They are designed for high
insertion/withdrawal cycles.

The contacts are available taped on rolls
for manual or automatic processing.

Note: depending on the litz wire used,
the connection cross sections (crimp
ranges) may deviate from the listed values.
For reasons of safety, only socket contacts
may be used in the live part of the
connector.

Crimp contacts, turned

M23 feedback connectors are fitted with 12 or 17 SF series signal contacts with Ø 1 mm depending on the number of positions.

These contacts are also used with M23 power connectors as signal contacts. This simplifies handling and warehousing considerably.

Note: depending on the litz wire used, the connection cross sections (crimp ranges) can differ from the values mentioned below.

Connectors

M17 - power connectors

Crimp contacts, punched-rolled

C-HC® are punched-rolled contacts.
They are designed for high
insertion/withdrawal cycles.

The contacts are available taped on rolls
for manual or automatic processing.

Note: depending on the litz wire used,
the connection cross sections (crimp
ranges) may deviate from the listed values.
For reasons of safety, only socket contacts
may be used in the live part of the
connector.

Mechanical and electrical data

Mechanical data

Housing material:	Copper zinc alloy (CuZn), die-cast zinc (GD-Zn)
Housing surface:	Nickel-plated/thick layer passivated (can be coated)
Insulating body:	Polyamide (PA 66)
Contact material:	Copper zinc alloy (CuZn)
Contact surface:	Nickel-plated (Ni) with gold coating (Au)
Contact connection method:	Crimp version
Sealing and O-ring:	Fluorocarbon rubber (FKM)
Ambient temperature:	-40°C ... 125°C
Cable entry:	Cable and coupler connectors for cable outside diameter of 7.5 - 18 mm, shielded
Type of locking:	M23 SPEEDCON screw locking, cable connector M23 x 1 coarse-pitch thread as an option
Mech. insertion/withdrawal cycles:	Standard: 100
Protection class:	IP67 in the locked state

Installation height	[m]	Up to 3000		Up to 3000		
Cable clamping area ⁴⁾	Max. Ø [mm]	18			18	

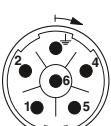

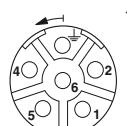

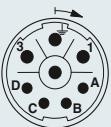

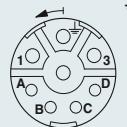

¹⁾ The effective current carrying capacity must be determined using a derating curve, if necessary, according to the application.

²⁾ 400 V when fitted with punched-rolled C-HC contacts

³⁾ The values specified assume that the connector pair is correctly locked and is only disconnected for testing and maintenance purposes. If the connector is unlocked and exposed to ambient conditions, and if there is a danger of pollution, the connector must be sealed using a protective cap ≥ IP54.

⁴⁾ The cable clamping areas specified on the following pages may vary depending on the cable material/structure. Selection and testing is the responsibility of the user.

M23 - power connectors

Selection guide

- M23 power connectors up to 30 A/630 V, crimp ranges up to 4 mm²
 - Cable connectors
 - Coupler connectors
 - Device connectors (device flanges)
 - Feed-throughs/panel feed-throughs
- The connectors are supplied fully assembled and are complemented by the respective crimp contacts.

The product chart provides an overview of the available components.

Connector type	
Shielded	Cable connectors Short, SPEEDCON fast locking system, see page 130. M23 x 1 standard interlocking, see page 130.

Tools and accessories

Crimping tools for turned contacts for M58 power connectors

For turned crimp contacts with Ø 1.6 mm for M58 power connectors, SF-Z0025 manual crimping pliers are used.

For user-friendly crimping of contacts with Ø 10 mm, the SL-Z0007 electric crimping tool is available.

Crimping stamps for processing contacts with Ø 10 mm are used in pairs. The stamps are tailored to the connection cross sections and marked.

Tools and accessories

Unlocking tool, square mounting flange

The unlocking tool is used for those contact carriers which are snapped into the housing without rear support. They are removed from the plug-in side using the unlocking tool.

The square mounting flange is used for cable and coupling connectors. In this way, the product range is easily expanded with connectors as panel feed-throughs.

SF-Z0019, eye for fixing rope

Dust protection caps, metal

Metal protective caps are available for higher demands as regards the degree of protection. These enable IP67 when locked.

The wire is fixed to the housing panel and prevents the metal protective caps from being lost.

Sensor/actuator cabling

A one-stop-shop for the entire range of solutions for field installation

With distributed connection technology, passive distributor systems connect the I/O devices to the PLC controller.

Phoenix Contact offers the most comprehensive range of sensor/actuator cabling on the market. Passive M5, M8, M12, and 7/8" components consisting of distributor boxes, cables, and connectors for assembly are available from stock. A comprehensive range of valve connectors rounds off the entire range.

The 1/2" and 7/8" range for the North American market can be found on our website.

Customer/sector-specific solutions

In order to be able to respond flexibly to your needs, cables and boxes can be manufactured to suit with specific cable lengths and types (e.g., a different sheath color).

For increased requirements, such as the railway or food industry, the long-term use of products outdoors and cables for flexible use in drag chains or robot applications, Phoenix Contact offers a range of suitable product series.

Faster assembly with the SPEEDCON fast locking system

SPEEDCON is the logical development of the M12 connector system that has been established and accepted for many years. Following the principle of "Plug & Turn", the connection time for M12 connectors is reduced by 90%.

Due to the 100% compatibility, redundant warehousing is eliminated.

Information for products with fixed cable length:

Products with fixed cable length are produced with the PVC cable type and are available from stock.

Ordering data for products with variable cable:

For a sensor/actuator cable, PVC, black, 4.5 m long, with a straight 3-pos. M12 connector and a straight M12 socket, the ordering data is as follows:

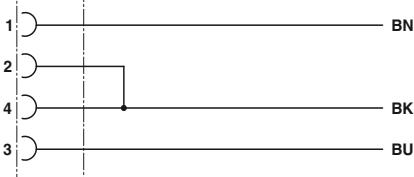

Order No.	Cable type	Length [m] Max. 40 m
1696756	PVC	4.5

Increments:
0.2 ... 3 m = 0.1 m
> 3 m = 0.5 m

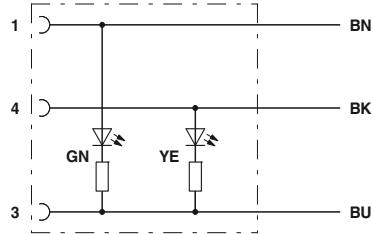

Cable description	Cable type	Suitable for:	Color coding	Pin assignment
PVC - black E221474	PVC	M8/M12	BN	1
PVC - gray E221474	500	M8/M12	BK	4
PVC - yellow E221474	540	M12	BU	3

Sensor/actuator cabling

Assembled cables

Plastic molded M23 hybrid connectors

- Transmission of signals, data (CAT5), and power
- Rated voltage: 630 V AC/850 V DC
- Contact material gold-plated CuZn
- Flame-retardant TPU handle material
- Knurl CuZn/Gd-Zn, nickel-plated
- IP67 protection
- Plug head temperature range -40°C to +105°C
- SPEEDCON fast locking system, M23 standard thread on request
- Angled version can be rotated

M23, 4+4+4+PE-position, socket, standard, 50 V/630 V, 26 A

Information for products with fixed cable length:

Products with fixed cable length are produced with the halogen-free PUR cable type and are available from stock.

Ordering data for products with variable cable:

For a sensor/actuator cable, PUR, halogen-free, black, 4.5 m long, with a straight 4-pos. M12 Y-connector and two straight M12 sockets, the ordering data is as follows:

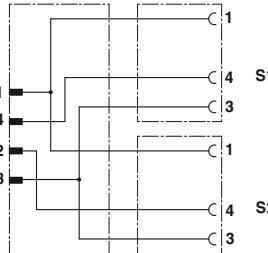

Order No.	Cable type	Length [m] Max. 40 m
1699766	PUR	4.5

Increments:
0.2 ... 3 m = 0.1 m
> 3 m = 0.5 m

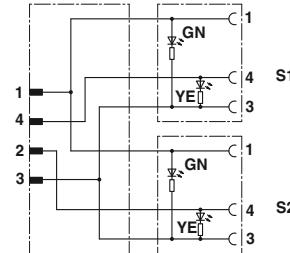

Cable description	Cable type	Suitable for:	Color coding	Pin assignment, 3-pos. Connector	Socket
PUR, halogen-free - black E221474	PUR	M8/M12	BN	1	1
PUR, halogen-free - gray E221474	280	M12	BK	2 + 4	4
TPE-U highly flexible - gray E221474	800	M8/M12	BU	3	3
PUR irradiated - orange E221474	150	M12			
PVC - black E221474	PVC	M8/M12			
PVC - gray E221474	500	M8/M12			
PVC - yellow E221474	540	M12			
PVC 105° - yellow E221474	542	M12			

With a combination of M12 and M8 connectors,
the limiting M8 value applies to the rated voltage.

Sensor/actuator cabling

Cabling for the railway industry

Versatile

Whether in the railway station, for control tasks or within rolling stock - our cables for the railway industry support flexible use.

Comprehensive portfolio

In addition to crimp and spring-cage connectors suitable for the rail industry, the product range includes assembled sensor/actuator cables with A-coding and data cables with D and X-coding for communication networks and passenger information systems.

Safe transmission

With 360° shielded connectors and cables, you can transmit signals reliably even in critical EMI applications.

Material selection

One of the most important aspects when choosing the right components for use in railway applications is material selection. We only use PA 6.6 as molding material which satisfies the stringent requirements regarding behavior in fire.

Securely locked

The vibration brake in the form of a wave shape with counterpart prevents the unintentional loosening of the plug-in connection in the event of vibrations.

The connectors are tested according to EN 50155 for resistance to shock and vibrations.

Temperature testing

Our products are intensively tested for an extended temperature range and for resistance to temperature shocks.

Certified according to IRIS

The Phoenix Contact Group is currently IRIS-certified. IRIS is an international rail industry standard for quality management systems.

Sensor/actuator cabling

Cabling for the food industry

Resistance to cleaning agents

The connectors in hygienic and washdown design are tested for resistance to cleaning agents commonly used in the food industry in accordance with Diversey and ECOLAB standards.

Product-contacting area

The components and devices used here must meet the highest hygienic requirements. Our cabling in hygienic design is suitable for use in this area.

Splash zone

The products in washdown design are suitable for the splash zone. Cost-effective features include resistance to cleaning agents and cleaning methods.

Connectors for the splash zone

For the special requirements of the food industry, we offer flush-type connectors and connectors with stainless steel components for assembly.

Assembled cables for all areas

Molded cables are available with connectors in sizes M8 and M12 in hygienic or washdown design.

Distributor boxes for the splash zone

Distributor boxes with stainless steel housing and permanently connected PVC master cable in washdown design are available for the splash zone.

Mechanical resistance

All components for the food industry are IP69K tested. This means guaranteed sealing for applications with steam jets, even after repeated temperature shocks.

Sensor/actuator cabling

Cabling for outdoor applications

Adapted to the relevant requirements

Through the selection of special materials, the components are designed for use outdoors. The materials are resistant to UV, ozone, corrosion, and temperatures.

For a variety of applications

Outdoor components are particularly suitable for use in traffic management systems, snow cats and snow cannons, photovoltaic systems or wind power plants.

UV and ozone test

Testing with special climate cabinets ensures that the connectors and cables are suitable for the control of solar plants, for example, without any restrictions.

Connectors for assembly

The connector knurls are made from stainless steel and the plastics are resistant to atmospheric influences. The connectors are available with insulation displacement connection and screw connection.

Assembled cables

In addition to 4, 5, and 8-pos. shielded and unshielded versions, PROFINET and Ethernet cables for data applications are also available.

Distributor boxes

Robust, fully molded sensor/actuator distributor boxes with 8 slots are available with fixed master cable or plug-in screw connection.

IP69K protection

For outdoor applications, a high IP protection class is essential because products are exposed to direct atmospheric influences.

Sensor/actuator cabling

Cabling for robots and drag chains

High level of durability

With their special design, our cables provide a high level of durability under alternating bending stress, e.g., in drag chains.

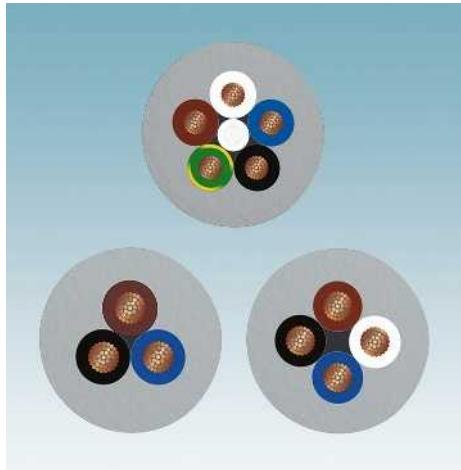

High level of resistance to welding sparks

The robust TPE-U outer sheath of the highly flexible cables is resistant to welding sparks and is particularly suitable for use in the field of resistance welding processes.

High level of durability under torsional stress

Our cables achieve a high level of durability - even with large angles of torsion and simultaneous bending stress.

**Large selection of number of positions**

Our sensor/actuator cables for robots and drag chains are available in 3, 4, and 5-pos. versions.

**Large selection of connectors**

Sensor/actuator cables with molded connectors are available both as plugs and sockets and with a straight or angled cable outlet.

**Highly flexible master cable**

For the distribution or grouping of signals at industrial robots, we offer a corresponding sensor/actuator box with special master cable.

**100% tested**

All supplied components are 100% electrically checked by Quality Assurance.

Sensor/actuator cabling

Cabling for power applications

Compact size with maximum current carrying capacity

With the M12 power connectors, the M12 design opens up new areas of application for energy supply.

DC application

The M12 power T and L DC codings are particularly suitable for the supply connection for I/O modules or for DC motors.

AC application

The M12 power S, K, and M AC codings are particularly suitable for the supply connection for AC motors.

**Connectors for assembly**

M12 connectors in straight and angled version with screw connection are available for power transmission.

**Safe transmission**

With 360° shielded connectors and cables, you can transmit signals reliably even in critical EMI applications.

**Power distributors**

An M12 box with and without diagnostics function plus a Y-distributor with T-coding are available for power distribution.

**100% tested**

All supplied components are 100% electrically checked by Quality Assurance.

Sensor/actuator cabling

Accessories

Assembly tools for sensor/actuator cables

The screwdriver with preset torque is the ideal tool for screwing in all M12 and M8 circular connectors with lengthwise knurl. The advantage of this tool becomes particularly evident when connecting distributor boxes. The tight arrangement and the large number of slots rarely makes it possible to install them correctly by hand. Thanks to the open design of the top unit, tracking is especially easy when screwing in.

Ordering data

Description	Type	Order No.	Pcs. / Pkt.

Assembly tools for sensor/actuator cables

To achieve tight plug-in connections, we recommend using assembly tools. M12 and 7/8" circular connectors can be assembled using a torque screwdriver and plug attachment.

The benefits of the plug attachment become particularly clear when connecting the connectors to the distributor boxes. Thanks to the open design, it enables quick adjustment and installation even when space is at a premium.

The version for M12 connectors with hexagonal stainless steel knurl is also made from stainless steel. This prevents the connector knurls from being contaminated by corrosive materials.

For greater flexibility, screwdrivers with adjustable torque are also available. When used in conjunction with the adapter insert, they can also be used to accommodate the available plug attachments.

Sealing elements

During transport or in the field, unoccupied plug-in connections must be protected or closed. Screw plugs, sealing caps and closing caps made of plastic or metal are suitable for this purpose. These achieve the IP65/IP67 as well as IP69K degrees of protection.

Sealing elements with holding band or fixing chain

All IP67 interfaces can be closed tightly using the screw plugs and sealing caps in the sizes M8, M12, and 7/8". The holding bands are fastened on the cable or the housing and are thus held captive.

The M12 metal protective cap with fixing chain is suitable for all pin versions. It is used in harsh industrial environments or for EMC applications.

Sensor/actuator cabling

Accessories

Accessories for M8 distributor boxes with plug-in master cable connection

The torque screwdriver with an M8 nut is the ideal tool for screwing in all M8 connectors with lengthwise knurl.

For distributors with 4 to 10 slots, we offer a suitable hood as replacement, a relevant screwdriver for fastening the hood as well as a torque screwdriver with a W24 nut for tightening the pressure nuts to a defined value.

The PROT M8 screw plug – for unoccupied slots – protects the distributors against foreign bodies and water. The IP65/67 degree of protection is attained.

The slots can be marked using the marking material. They can be marked either by hand or using a plotter.

Notes:

Additional marking material and tools can be found in Catalog 5.

Accessories for M8 distributor boxes with M12/M16 plug-in connection

Suitable sockets in an angled design with a 5 and 10 meter master cable are available for distributors with 4 to 10 slots. In order to use a master cable as per the specific requirements, sockets are available in straight and angled designs for free assembly.

The slots can be marked using the marking material. They can be marked either by hand or using a plotter.

The torque screwdriver with matching nuts is the ideal tool for screwing together all M8 connectors with lengthwise knurl.

The PROT M8 screw plug – for unoccupied slots – protects the distributors against foreign bodies and water. The IP65/67 degree of protection is attained.

Notes:

Additional marking material and tools can be found in Catalog 5.

Accessories for QUICKON distributor boxes with a connection cross section of 0.14 mm² ... 0.34 mm²

The Q-PROT 9/11 closing cap – for unoccupied slots – protects the distributors against foreign bodies and water. The IP65/67 degree of protection is attained.

A torque screwdriver with a W13 nut, already familiar from M8 or M12 screw connections, is now also available for the fast connection pressure nuts. The handling of the tools is self-explanatory and easy.

For the distributors, we offer a replacement plug hood, a relevant screwdriver for fastening the hood as well as a torque screwdriver with a W24 nut for tightening the pressure nuts to a defined value.

The slots can be marked using the marking material. They can be marked either by hand or using a plotter.

The QUICKON set comprising a splice ring, a pressure nut, and a line seal serves for replacement purposes if necessary.

Notes:

Additional marking material and tools can be found in Catalog 5.

Sensor/actuator cabling

Accessories

Accessories for QUICKON distributor boxes with a connection cross section of 0.34 mm² ... 0.75 mm²

The scope of supply of the distributors includes a black rubber seal for an external cable diameter from 6.5 mm to 9.5 mm. Rubber seals are also available from 4.0 mm to 6.5 mm (yellow seal) or 9.0 mm to 13.0 mm (red seal) master cables. The torque screwdriver with a W24 nut is suitable for tightening the pressure nuts to a defined value.

The QUICKON set comprising a pressure nut, a cap, a line seal, and a splice ring serves for replacement purposes if necessary.

The socket wrench facilitates comfortable loosening or tightening of the QUICKON pressure nuts.

The Q-PROT 9/11 closing cap – for unoccupied slots – protects the distributors against foreign bodies and water. The IP65/67 degree of protection is attained.

The slots can be marked using the marking material. They can be marked either by hand or using a plotter.

Sensor/actuator cabling

Sensor/actuator cable - cable range

Symbol key

	With UL Style		Suitable for drag chain applications		Resistant to welding sparks
	UV resistant		Flame-retardant		High temperature resistance
	Good oil resistance		Good resistance to chemicals		Suitable for torsional stress
	Halogen-free		Suitable for the food industry		Suitable for railway applications

PUR, halogen-free – PHOENIX CONTACT standard

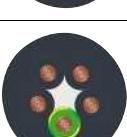

Permanently flexible control cables for use in drag chains, revolving/swivel tables, and as machine control cables for extreme operating conditions. Suitable for bending cycle loads with long-term durability. The special PUR outer sheath offers excellent resistance to oils according to DIN EN 60811-2-1, lubricants, cooling agents, and other aggressive substances.

Additional features: halogen and PVC-free, no silicone or substances that would hinder coating with paint or varnish, resistant to hydrolysis and flame-retardant according to UL-FT2.

TPE-U highly flexible

Permanently flexible control cable that is ideal for use in drag chains and industrial robots. The cable can be used wherever extreme bending and torsional stress occur simultaneously and significantly longer durability is desired. It is resistant to welding sparks and is therefore designed exclusively for use in resistance welding processes. The use of new materials eliminates irradiation cross-linking, which makes the cable easier to recycle. The cables therefore meet the requirements of DIN EN ISO 14001. Additional features: halogen and PVC-free, flame-retardant according to UL-FT1, VW1, and 1581 §1061, very good resistance to oils

according to VDE 0250 Part 407, chemicals, lubricants, and coolants as well as other aggressive substances.

Due to the extremely robust outer sheath, this cable should only be stripped in 5 cm increments.

Outer sheath material	TPE-U
Min. bending cycles	10 million
Minimum bending radius	
Fixed	5 x D
Mobile	7.5 x D
Traverse path	5 m
Acceleration Speed	20 m/s ² 3.33 m/s
Torsion angle	±360°
Min. torsion cycles	13 million
Tested at	+20°C ... +25°C

PUR irradiated, resistant to welding sparks

Due to the irradiation of the PUR outer sheath, the properties typical of PUR, e.g., resistance to temperature, UV, and welding sparks, are greatly improved. The cables are suitable for robust use in robot technology, particularly in welding robots, and are characterized by very long durability.

Flame-retardant according to DIN VDE 0472, Part 804, test type B.

Sensor/actuator cabling

Sensor/actuator cable - cable range

PUR/PVC (also applies to type PUR for M5 connectors)

The cables are designed for robust use in machine tools, assembly/production lines, as well as production involving metal cutting. They are free from silicone and substances that would hinder coating with paint or varnish and have a high resistance to abrasion. The outer sheath also offers excellent resistance to oil and chemicals according to DIN EN 60811-2-1 and is

flame-retardant according to DIN EN 50265.

The outer sheath is manufactured using the coextrusion process.

PVC - 80°C and 105°C

These very reasonably priced high-quality cables are suitable for use under dry conditions and average mechanical strain associated with machine tools, packaging machines, and assembly/production lines. The cable offers a certain degree of resistance to oil and chemicals and is less susceptible to wear. Flame-retardant to VW-1 according to UL 758.

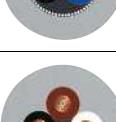

VW-1 is the toughest flame-resistance test for single cables.

PE-X - for outdoor applications

The halogen-free control cable is suitable for outdoor installation in direct sunlight. The insulation and sheath materials offer excellent resistance to weather, UV, and wear. The outstanding resistance to oil, high degree of flexibility, and low smoke gas density also make it suitable for automation technology as well as machine building and systems manufacturing.

Additional features: halogen-free according to

DIN VDE 0472 Part 815, flame-retardant according to DIN EN 60332-1-2 and 50266-2-5, UV resistant according to DIN VDE 0276-605, oil resistant according to DIN EN 60811-2-1 (168 h at 100°C) and 50306.

Sensor/actuator cabling

Sensor/actuator cable - cable range

PP-EPDM - for the food industry

This cable with PP-EPDM outer sheath is specifically designed for use in the food industry. Dirt can be easily detected on the light colored surface so that food is not contaminated by coming into contact with the cable. Furthermore, the cable is resistant to common cleaning agents and disinfectants.

Outer sheath material PP-EPDM

Sensor/actuator cabling

Sensor/actuator boxes - cable range

PUR/PVC (for sensor/actuator boxes)

The cables are designed for robust use in machine tools, assembly/production lines, as well as production involving metal cutting. They are free from silicone and substances that would hinder coating with paint or varnish and have a high resistance to abrasion. The outer sheath also offers excellent resistance to oil and chemicals according to VDE 0472 Part 803, is flame-retardant according to DIN EN 50265, and is resistant to hydrolysis. The outer sheath

is manufactured using the coextrusion process.

Sensor/actuator cabling

Cable range - installation instructions

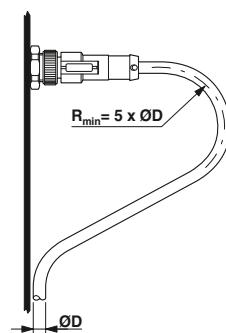

The following pages provide an overview of the appropriate installation of SAC cables in harsh industrial environments that will guarantee a long service life and reduce costs.

Bending radius

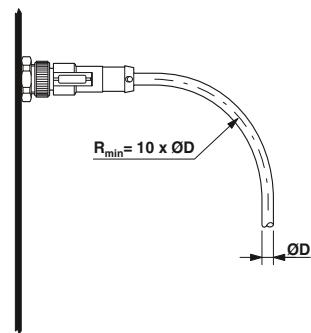

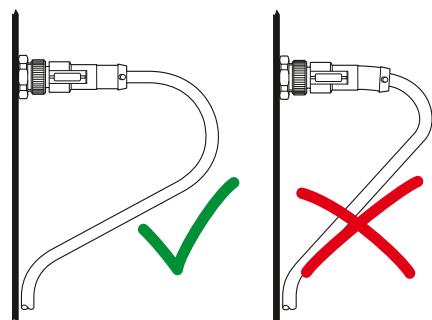

In the case of a mobile installation, a generous bending radius can be advantageous, since the greater the bending radius, the lower the voltages occurring as a result of the movement. The result is an increased cable service life (the minimum cable-specific bending radii must be taken into consideration).

Load

A sufficient cable loop at the connection point can prevent the material from becoming prematurely worn and in the case of additional loads ensures sufficient clearance for voltages to be absorbed.

Fixed installation

Mobile installation

Mobile installation

In the case of a mobile installation, the cable length should be sufficient to adequately absorb the tensile loads. This can be implemented, for example, using cable loops and C drag chains.

Cables in power track chains

Where possible, cables should be laid individually and loosely next to each other within power track chains. Isolating segments or bridges should be placed between the various cables or these should be arranged into separate bore holes in the neutral zone of the drag chain.

The laying of cables that have very different outside diameters next to or across each other is generally not recommended. If, however, this cannot be avoided for design reasons, isolating segments or bridges should be installed for a reasonable service life. If isolating segments cannot be installed between each cable, we recommend that our cables with an outside diameter < 10 mm should be laid loose, together with cables with similar cross sections within a guide tube in the drag chain.

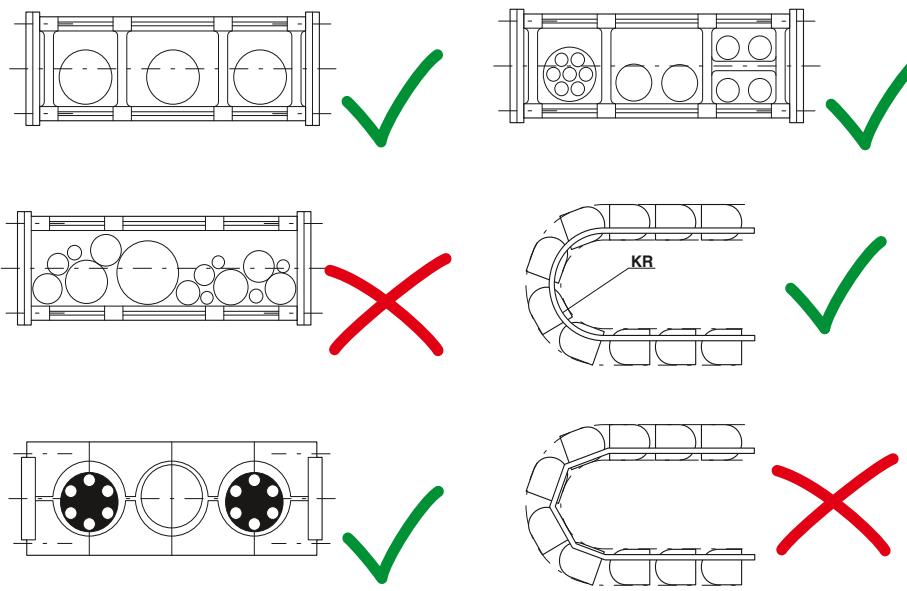

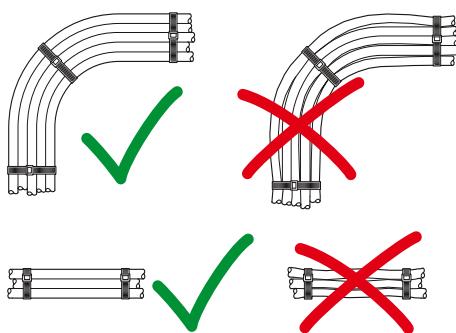

In terms of the arrangement of the cables, it is also important to ensure that heavy cables are routed outwards and light cables, such as our SAC cables, are routed inwards. They should be strain-relieved on both sides, or at least at the moving end of the drag chain. A distance of 20 to 30 times the outside diameter of the cable is recommended between the point at which the bending motion ends and the attachment.

The cables must be able to move completely freely within the radius of curvature in order to prevent forced guidance of the drag chain. Guide value: 10% of the outside diameter should be allocated as free space.

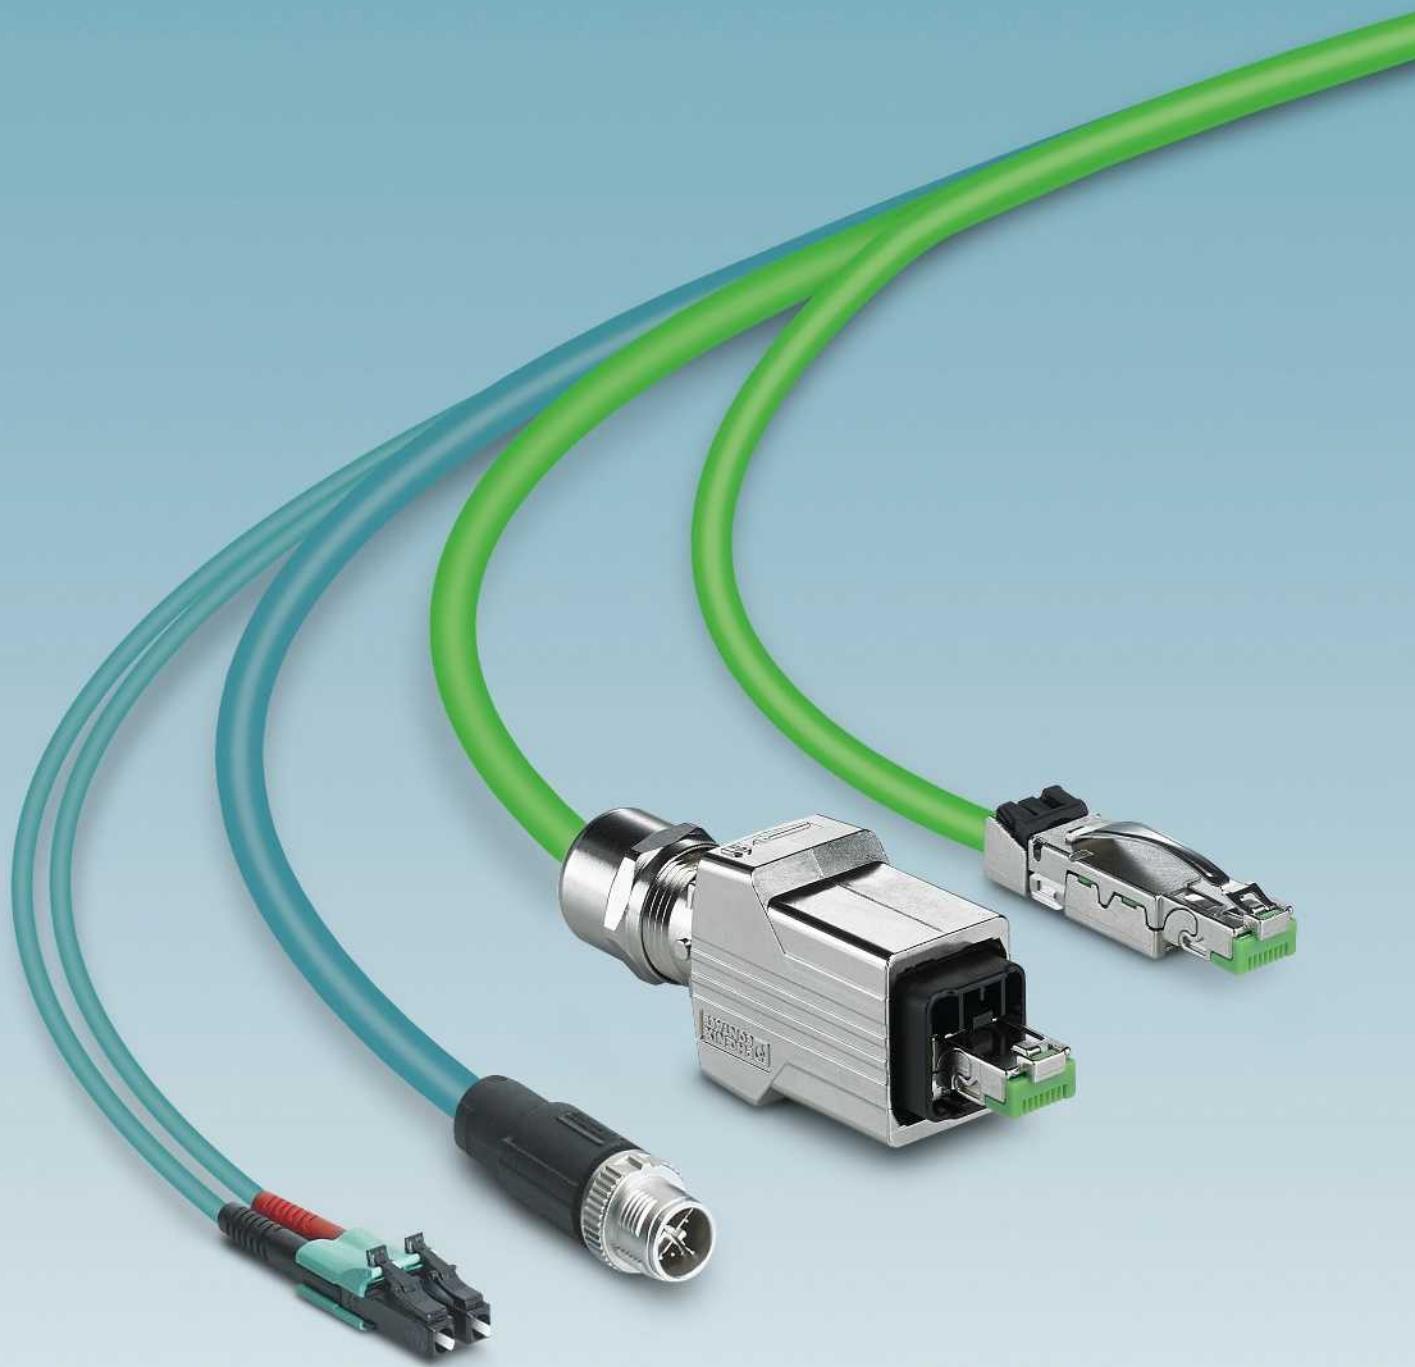

Note: when laying the cables, observe the information provided by the drag chain manufacturer.

Cable bundling

When bundling several individual cables, it is important to ensure that the cables can move freely within the bundle. The cables must not become deformed. Round cables with greatly varying outside diameters should only be laid next to each other when bridges are used.

KR = radius of curvature

Data connectors and cables

Standardized data interfaces are increasingly being used in industrial applications as part of the decentralization of complex manufacturing systems and the increasing need for rapid information and data exchange.

PLUSCON data is the connector range from Phoenix Contact for secure and reliable data transmission. Benefit from innovative connection technologies and a design suitable for industrial applications. The product range includes assembled cables, flush-type connectors, and connectors for field assembly, plus special tool-free connector systems for FO and copper-based cabling.

When it comes to implementing networks, Phoenix Contact offers a comprehensive portfolio for Industrial Ethernet and PROFINET as well as EtherCAT®. Furthermore, we offer components for fieldbus systems such as PROFIBUS, CANopen®/DeviceNet™, and FOUNDATION Fieldbus.

Solutions for copper cabling

- Up to 10 Gbps
- Protection class IP20 to IP69K
- 4 and 8-pos. versions
- Spring, pierce, and IDC displacement connection
- 360° shielding concept
- For all common networks and fieldbuses

Solutions for FO cabling

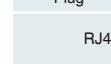

- Up to 40 Gbps
- Protection class IP20 to IP65/67
- For POF, PCF, and GOF
- For all common FO interfaces

Data connectors and cables

Network components - patch cables

Accessories

The reliability of networks is becoming more and more important and is a decisive factor for the future of entire companies. Independent studies show that more than 70% of network errors and crashes are due to faulty cabling infrastructure and manipulation of the connecting cables.

With the new accessories for Factoryline patch cables, the various safety requirements for automation are comprehensively met.

19-inch frame, empty, for using 8 modules (RJ45/ARJ45)			
Gray (similar to RAL 7035) Black (similar to RAL 9005)			
RJ45 module , 6 x RJ45 to 6 x RJ45, CAT6 _A , can be unlocked from the front, variable length	CUC-PP-MODUL-RJ45:6-RJ45:6/...	1407995	1
Patch bay, 19", for orderly cabling in the control cabinet			
Gray, with plastic hooks			
Dummy frame, size of one module, for use in the frame	CUC-PP-MODUL-COVER	1407988	1
Accessories		Accessories	
Screw set, fixing material for the frame			
Cable binder, fixing material for module cable routing	CUC-PP-MODUL-CABLEFIXSET	1407991	1
CUC-PP-FRAME-SCREWSET			

Ordering example for modules of variable length:

For an RJ45 module with a cable length of 25.0 m, the ordering data is as follows:

Order No.	Length [m]
1407995	/ 25
	Increment: 1.5 m ... 80 m = 0.5 m

Data connectors and cables

Network components - assembled fiber optic cables

Zip cord fiberglass cable for assembly, OM3

- Multi-mode patch cable for indoor installation
- Ideal for use in distributor systems and for connecting termination devices
- 2.8 mm single elements made from halogen-free and flame-retardant material
- UL approval type OFNR (riser) for USA and Canada
- Low-bend fiber
- Data rate: up to 10 Gbps up to 300 m

Digital I/O devices with M8 connection method

The digital I/O devices are particularly suitable for use in machines close to the process.

Features:

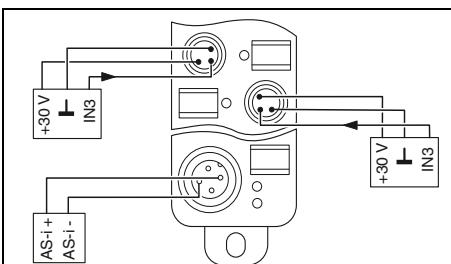

- Optimized for 30 mm mounting profile
- M12 connection method with SPEEDCON fast locking system for the AS-Interface connection
- M8 connection method for the I/Os

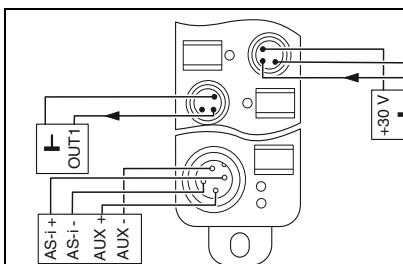

4 digital inputs

4 digital inputs

Panel feed-throughs, memory sticks, protective cover

Panel feed-throughs can be implemented with the IP67 panel mounting frame and the USB socket inserts. The USB memory sticks with IP67 protection enable wireless data transmission in rough industrial environments.

Data connectors and cables

Cable range

Symbol key

	With UL Style		Suitable for drag chain applications		Resistant to welding sparks
	UV resistant		Extremely flame-retardant		High temperature resistance
	Good oil resistance		Good resistance to chemicals		Suitable for torsional stress
	Halogen-free		Transmission properties		Suitable for railway applications

INTERBUS cable – type 900

INTERBUS cable for highly flexible use in dry and humid rooms and harsh industrial environments. The remote bus cable is certified in accordance with the requirements of the INTERBUS Club under No. 117.			

The cable is halogen-free and flame-retardant according to VDE 0482, Part 265-2-1/IEC 332-1. The wire insulation of the inner conductor is made from polyethylene.

Outer sheath material PVC
Minimum bending radius 7.5 x D
Tested at 20 ... 25°C

Type	Number of positions	Use	Structure	Cross section	Wire colors	Wire insulation	Temperature range	Page
900 PVC Green	6-pos.	M12	3 x 2 x 0.25 mm ² 32 x 0.1 mm		Yellow, green, white, brown, pink, gray	PE	-30°C ... 70°C	409 412

PROFIBUS cable – type 910

--	--	--	--	--

PROFIBUS cable, suitable for use in drag chains in harsh industrial environments. The cable is also oil resistant.

Outer sheath material PUR
Number of bending cycles 5 million
Minimum bending radius 10 x D
Traverse path 10 m
Acceleration 7 m/s²
Speed 180 m/min.
Tested at 20 ... 25°C

Type	Number of positions	Use	Structure	Cross section	Wire colors	Wire insulation	Temperature range	Page
910 PUR Violet	2-pos.	M12	1 x 2 x 24 AWG 19 x 0.15 mm		Green, red	PE	-40°C ... 80°C	410 413

DeviceNet™/CANopen® cable – type 920

DeviceNet™/CANopen® cable for flexible installation. The cable is suitable for drag chain applications and use in harsh industrial environments. The cable is also oil resistant.

Outer sheath material	PUR
Number of bending cycles	5 million
Minimum bending radius	10 x D
Traverse path	10 m
Acceleration	7 m/s ²
Speed	180 m/min.
Tested at	20 ... 25°C

920 PUR Violet	4-pos.	M12, M8	1 x 2 x 22 AWG 19 x 0.15 mm + 1 x 2 x 24 AWG 19 x 0.15 mm		Red, black, blue, white	PO, PE	-40°C ... 80°C	411 416 417 420

DeviceNet™/CANopen® cable – type 923

DeviceNet™/CANopen® cable for flexible installation. The cable is suitable for drag chain applications and use in harsh industrial environments. The cable is also oil resistant.

Outer sheath material	PUR
Number of bending cycles	5 million
Minimum bending radius	10 x D
Traverse path	10 m
Acceleration	7 m/s ²
Speed	180 m/min.
Tested at	20 ... 25°C

Type	Number of positions	Use	Structure	Cross section	Wire colors	Wire insulation	Temperature range	Page
923 PUR Gray	4-pos.	M12, 7/8"	1 x 2 x 22 AWG 19 x 0.15 mm + 1 x 2 x 24 AWG 19 x 0.15 mm		Red, black, blue, white	PO, PE	-40°C ... 80°C	415 418

DeviceNet™ cable - type 928

DeviceNet™/CANopen® cable for fixed installation. The cable is suitable for use in harsh industrial environments. The cable is also oil resistant.

Outer sheath material	PVC
Minimum bending radius	10 x D

Type	Number of positions	Use	Structure	Cross section	Wire colors	Wire insulation	Temperature range	Page
928 PVC Gray	4-pos.	7/8"	1 x 2 x 18 AWG 19 x 0.26 mm + 1 x 2 x 15 AWG 19 x 0.34 mm		Red, black, blue, white	PVC	Fixed: -40°C ... 80°C	419

Data connectors and cables

Cable range

FOUNDATION Fieldbus cable – type 960

FOUNDATION Fieldbus/PROFIBUS PA cable – type 961

FOUNDATION Fieldbus cable for fixed installation. The cable is UV resistant and flame-retardant according to UL 1685. This makes it suitable for use both outdoors and indoors.

Cable type 961 is available in a blue version designed specifically for use in the hazardous area.

Outer sheath material PVC

Minimum bending radius 10 x D

Type	Number of positions	Use	Structure	Cross section	Wire colors	Wire insulation	Temperature range	Page
960 PVC Orange	2-pos.	7/8", M12	2 x 20 AWG 7 x 0.3 mm		Blue, orange	PO	-30°C ... 105°C	422
961 PVC Blue	2-pos.	7/8", M12	2 x 20 AWG 7 x 0.3 mm		Blue, orange	PO	-30°C ... 105°C	414 421

CC-Link cable – type 990

CC-Link cable for fixed indoor installation. The cable is flame-retardant according to UL 1685.

Outer sheath material PVC

Type	Number of positions	Use	Structure	Cross section	Wire colors	Wire insulation	Temperature range	Page
990 PVC Red	3-pos.	M12	3 x 22 AWG 7 x 0.28 mm		White, blue, yellow	Foam PE	-30°C ... 60°C	See: phoenix contact.net/ products

PROFINET cable – type 93A

PROFINET cable for fixed installation. The cable is flame-retardant and its transmission properties meet CAT5.

Outer sheath material PVC

Minimum bending radius 7.5 x D

Type	Number of positions	Use	Structure	Cross section	Wire colors	Wire insulation	Temperature range	Page
93A PVC Green	4-pos.	M12, RJ45	4 x 22 AWG single-strand		White, yellow, blue, orange	PE	-25°C ... 80°C	380

PROFINET cable – type 93B

PROFINET cable for flexible installation. The cable is oil resistant. It is UV resistant according to UL 1581 Sec. 1200 and therefore also suitable for outdoor use. The cable's transmission properties meet CAT5.

Outer sheath material PVC
Minimum bending radius 7 x D
Tested at 20 ... 25°C

Type	Number of positions	Use	Structure	Cross section	Wire colors	Wire insulation	Temperature range	Page
93B PVC Green	4-pos.	M12, RJ45	4 x 22 AWG 7 x 0.25 mm		White, yellow, blue, orange	PE	-40°C ... 70°C	386 380 382

PROFINET cable – type 93C

PROFINET cable for use in drag chains. The cable is halogen-free and oil resistant. It is UV resistant and therefore also suitable for outdoor use. The cable's transmission properties meet CAT5.

Outer sheath material PUR
Number of bending cycles 3 million
Minimum bending radius 7.5 x D
Traverse path 10 m
Acceleration 4 m/s²
Speed 4 m/s
Tested at 20 ... 25°C

Type	Number of positions	Use	Structure	Cross section	Wire colors	Wire insulation	Temperature range	Page
93C PUR Green	4-pos.	M12, RJ45	4 x 22 AWG 7 x 0.25 mm		White, yellow, blue, orange	PE	-40°C ... 70°C	380 382

PROFINET cable – type 93R

PROFINET cable for robot applications. The cable is oil resistant. It is UV resistant according to UL 1581 Sec. 1200 and therefore also suitable for outdoor use. The cable's transmission properties meet CAT5.

Outer sheath material PUR
Torsion angle ±180°
Torsion cycles 1 million

Type	Number of positions	Use	Structure	Cross section	Wire colors	Wire insulation	Temperature range	Page
93R PUR Green	4-pos.	M12, RJ45	4 x 22 AWG 19 x 0.15 mm		White, yellow, blue, orange	PE	-40°C ... 80°C	380 382

Data connectors and cables

Cable range

PROFINET cable – type 937

PROFINET cable for railway applications.
The cable is oil resistant. It meets fire safety standard BS6853.

The cable's transmission properties meet CAT5.

Outer sheath material **RADOX® GKW S**

Minimum bending radius **6 x D**

Type	Number of positions	Use	Structure	Cross section	Wire colors	Wire insulation	Temperature range	Page
937 RADOX® Black	4 pos.	M12, RJ45	4 x 22 AWG 7 x 0.25 mm		White, yellow, blue, orange	RADOX®	-40°C ... 90°C	380 382

EtherCAT® cable - type 93G

EtherCAT® cable for flexible installation.
The cable is oil resistant. It is UV resistant according to UL 1581 Sec. 1200 and is therefore also suitable for use in harsh industrial environments. The cable's transmission properties meet CAT5.

Outer sheath material **PVC**

Minimum bending radius **7 x D**
Tested at **20 ... 25°C**

Type	Number of positions	Use	Structure	Cross section	Wire colors	Wire insulation	Temperature range	Page
93G PVC Green	4 pos.	M12, PP, RJ45	4 x 22 AWG 7 x 0.25 mm		White, yellow, blue, orange	PE	-40°C ... 70°C	384

Sercos® cable - type 93K

Sercos® cable for flexible installation.
The cable is oil resistant. It is UV resistant according to UL 1581 Sec. 1200 and is therefore also suitable for use in harsh industrial environments. The cable's transmission properties meet CAT5.

Outer sheath material **PVC**

Minimum bending radius **7 x D**
Tested at **20 ... 25°C**

Type	Number of positions	Use	Structure	Cross section	Wire colors	Wire insulation	Temperature range	Page
93K PVC Red	4 pos.	M12, PP, RJ45	4 x 22 AWG 7 x 0.25 mm		White, yellow, blue, orange	PE	-40°C ... 70°C	See: phoenix contact.net/ products

Ethernet cable – type 93E

Ethernet cable for flexible use. The cable is halogen-free and oil resistant. Its transmission properties meet CAT5.

Outer sheath material PUR
Minimum bending radius 5 x D

Type	Number of positions	Use	Structure	Cross section	Wire colors	Wire insulation	Temperature range	Page
93E PUR Blue	4 pos.	M12, RJ45	2 x 2 x 26 AWG 7 x 0.25 mm		White/orange-orange, white/green-green	PE	-20°C ... 80°C	381 388

Ethernet cable – type 94A

Ethernet cable for fixed installation. The cable's transmission properties meet CAT5.

Outer sheath material PUR
Minimum bending radius 7 x D
Tested at 20 ... 25°C

Type	Number of positions	Use	Structure	Cross section	Wire colors	Wire insulation	Temperature range	Page
94A PUR Blue	8-pos.	M12, PP, RJ45	4 x 2 x 24 AWG single-strand Twisted pair		White/blue-blue, white/orange-orange, white/green-green, white/brown-brown	PE	-20°C ... 70°C	381

Ethernet cable – type 94B

Ethernet cable for flexible installation. The cable is resistant to oil and chemicals and is flame-retardant. The cable's transmission properties meet CAT5.

Outer sheath material PUR
Minimum bending radius 5 x D

Type	Number of positions	Use	Structure	Cross section	Wire colors	Wire insulation	Temperature range	Page
94B PUR Blue	8-pos.	M12, RJ45	4 x 2 x 26 AWG 7 x 0.25 mm		White/blue-blue, white/orange-orange, white/green-green, white/brown-brown	PE	-40°C ... 80°C	381 390

Data connectors and cables

Cable range

Ethernet cable – type 94P

Ethernet cable for flexible installation. The cable is flame-retardant and halogen-free. The cable's transmission properties meet CAT5.

Outer sheath material PUR
Minimum bending radius 90 mm (mobile)
50 mm (fixed installation)

Type	Number of positions	Use	Structure	Cross section	Wire colors	Wire insulation	Temperature range	Page
94P PUR Blue	8-pos.	M12, RJ45	4 x 2 x 26 AWG 7 x 0.16 mm		White-blue, blue, white-orange, orange, white-green, green, white-brown, brown	PE	-20°C ... 70°C	374

Ethernet cable – type 94C

Ethernet cable for universal use in drag chains. The cable is resistant to oil and chemicals and is flame-retardant. The cable's transmission properties meet CAT5.

Outer sheath material PUR
Minimum bending radius 5 x D

Type	Number of positions	Use	Structure	Cross section	Wire colors	Wire insulation	Temperature range	Page
94C PUR Blue	8-pos.	M12, RJ45	4 x 2 x 26 AWG 19 x 0.10 mm		White-blue, blue, white-orange, orange, white-green, green, white-brown, brown	PP	-20°C ... 80°C	381 390

Ethernet cable – type 94D

Ethernet cable for flexible installation. The cable is oil resistant. It is UV resistant according to UL 1581 Sec. 1200 and therefore also suitable for outdoor use. The cable's transmission properties meet CAT5.

Outer sheath material PVC

Type	Number of positions	Use	Structure	Cross section	Wire colors	Wire insulation	Temperature range	Page
94D PVC Black	8-pos.	M12, PP, RJ45	4 x 2 x 26 AWG 7 x 0.16 mm Twisted pair		White-blue, blue, white-orange, orange, white-green, green, white-brown, brown	PP	-40°C ... 80°C	381

Ethernet cable – type 94E

Ethernet cable for fixed installation. The cable is resistant to oil and chemicals and is flame-retardant. It is also halogen-free and its transmission properties meet CAT6_A.

Outer sheath material PUR

Type	Number of positions	Use	Structure	Cross section	Wire colors	Wire insulation	Temperature range	Page
94E PUR Blue	8-pos.	M12, PP, RJ45	4 x 2 x 23 AWG single-strand Twisted pair		White-blue, blue, white-orange, orange, white-green, green, white-brown, brown	PE	-20°C ... 80°C	381

Ethernet cable – type 94F

Ethernet cable for flexible installation. The cable is resistant to oil and chemicals and is flame-retardant. It is also halogen-free and its transmission properties meet CAT6_A.

Outer sheath material PUR

Minimum bending radius 10 x D

Type	Number of positions	Use	Structure	Cross section	Wire colors	Wire insulation	Temperature range	Page
94F PUR Blue	8-pos.	M12, PP, RJ45	4 x 2 x 26 AWG 7 x 0.16 mm Twisted pair		White-blue, blue, white-orange, orange, white-green, green, white-brown, brown	PE	-20°C ... 80°C	392

Ethernet hybrid cable – type 94H

Ethernet hybrid cable for drag chain application. The cable has four wires for data transmission and four wires for power supply. It is oil resistant and flame-retardant. It is also halogen-free and its transmission properties meet CAT5.

Outer sheath material PUR

Number of bending cycles 2 million

Minimum bending radius 10 x D

Installation systems

QPD installation system

Industrial power distribution does not have to be time-consuming or complicated. The robust IP68/IP69K installation system for capacities up to 690 V/40 A from Phoenix Contact is proof of this.

Thanks to the proven QUICKON IDC fast connection, cables up to 5 x 6.0 mm² can be connected quickly and easily, without the need for stripping or special tools.

The system, which consists of H- and T-distributors, panel feed-throughs, connectors, and cable connectors, offers a wide range of options for power distribution in industrial environments and building installation.

1.5 mm² installation system

H-distributor	452
T-distributor	453

Accessories

- Plastic labels ③ can be stuck to the middle of the H-distributor
- Red sealing plugs ④ can be easily stuck into the QUICKON nuts and create a seal when screwed tight
- Protective caps with retaining cords ⑤ for closing open QUICKON domes which are going to have a connector (for example) fitted at a later date
- Locking nuts ⑥ for fixing the panel feed-throughs to thin panels that are unable to accommodate a proprietary thread
- Insulating sleeve ⑦ for 4.8 mm slip-on connections
- Transparent protective caps ⑧ for attaching to the open QUICKON dome
- Transparent protective caps ⑨ at front for attaching to the connector
- Slotted socket wrenches ⑩ enable you to tighten the QUICKON nuts easily and securely
- Red coding profiles ⑪ for preventing QPD connector mix-ups. Simply insert them into the QUICKON dome and connector on the front side. They are marked with an arrow and their symmetrical form enables them to be mounted in four different positions
- Aluminum shielding tape ⑬ prevents the splicing of the braided shield and enables a clean shield connection

Installation system

2.5 mm² installation system

Panel feed-throughs, 2.5 mm², with push-in connection

- Devices no longer need to be opened in order to connect the cables
- User-friendly connection, even on devices that are difficult to access
- For internal push-in connection, solid conductors are simply stripped and inserted in the connection
- Touch-proof in accordance with DIN EN 50274
- Also available as gray color versions

Installation system

2.5 mm² installation system

Accessories

- Mounting clip ① for easily fixing the H-distributor in place without the need for tools
- DIN rail mounting can be achieved using two DIN-rail adapters ②
- Plastic labels ③ can be stuck to the middle of the H-distributor
- Red sealing plugs ④ can be easily stuck into the QUICKON nuts and create a seal when screwed tight
- Protective caps with retaining cords ⑤ for closing open QUICKON domes which are going to have a connector (for example) fitted at a later date
- Locking nuts ⑥ for fixing the panel feed-throughs to thin panels that are unable to accommodate a proprietary thread
- Insulating sleeve ⑦ for 4.8 mm slip-on connections
- Transparent protective caps ⑧ for attaching to the open QUICKON dome
- Transparent protective caps ⑨ at front for attaching to the connector
- Slotted socket wrenches ⑩ enable you to tighten the QUICKON nuts easily and securely
- Red coding profiles ⑪ for preventing QPD connector mix-ups. Simply insert them into the QUICKON dome and connector on the front side. They are marked with an arrow and their symmetrical form enables them to be mounted in four different positions
- AS-Interface seals ⑫ for connecting 1 or 2 AS-Interface cables
- Aluminum shielding tape ⑬ prevents the splicing of the braided shield and enables a clean shield connection

	ALU-SB	1404531	100

Panel feed-throughs, 2.5 mm² for intrinsically safe circuits

- Devices no longer need to be opened in order to connect the cables
- User-friendly connection, even on devices that are difficult to access
- Touch-proof in accordance with DIN EN 50274

Notes:

Intended for applications in intrinsically safe circuits according to EN 60079-11 and EN 60079-14.

With litz wires

With manual solder/slip-on connection

Heavy-duty connectors

HEAVYCON are industrial connectors for harsh operating conditions. The product range consists of housings, contact inserts, cable glands, and accessories. The housings are available in versions for different ambient conditions. For contact inserts, a distinction is made between fixed, modular, and combined versions.

Housing

The ambient conditions determine the material from which the housings are produced. With HEAVYCON EVO, for example, high-grade industrial plastics and NBR seals cover a wide range of industrial environments.

In applications where plastic cable glands have already proven themselves, there is nothing standing in the way of using plastic HEAVYCON EVO. Metal housings are essential for EMC applications, but also for applications with high cable tensile load or extreme temperatures.

For plug-in connections that are only for startup or infrequent servicing, HEAVYCON ADVANCE or HPR housings with screw locking are recommended for economic reasons. These series are characterized in particular by their stability, and excellent EMC shielding.

Contact inserts with a fixed number of positions

Fixed contact inserts are contact carriers and contacts with different connection technologies such as screw, spring, crimp, insulation displacement, and axial screw connections.

Modular contact inserts

Modular contact inserts allow you to combine several individual connectors, e.g., for power, data, signals, and pneumatics, in the same connector housing.

Heavy-duty connectors

HEAVYCON product range overview

STANDARD connectors

The robust metal housings of the connectors are resistant to dirt, water, vibration and high mechanical loads. Standard housings have a single or double locking latch. Various supporting base elements such as panel mounting bases, box mounting bases or coupling housings are available as required. In addition to contact inserts with a fixed number of positions, modular contact inserts are also available.

EVO connectors

The EVO connectors are characterized by the patented EVO-Lock system. It allows the cable outlet direction to be freely selected during assembly. This reduces the stored housing variance by up to 75%. The EVO housings are compatible with standard aluminum housings. They fit the standard panel cutouts of heavy-duty connectors.

ADVANCE connectors

Space and cost savings as there is no need for panel mounting bases. The ADVANCE housings with screw locking are suitable for the most stringent requirements, such as particularly aggressive atmospheres and sensitive interfaces. In addition to contact inserts with a fixed number of positions, modular contact inserts are also available.

Contact inserts with a fixed number of positions

The range includes A/B/BB/BBB/D/DD/HS/HV and K series contact inserts. The B series is available with screw, crimp, push-in, and QUICKON connection.

Modular contact inserts

There is an increasing demand for data, control signals, and energy supply to be combined in a single connector housing. With 4 frame sizes and 25 contact inserts to choose from, individual combinations can be created.

Housing for railway applications

HEAVYCON HPR is specified for use in transport and transportation technology. The sleeve housings, panel mounting bases, and box mounting bases conform to the established standard for the safe transmission of signal and power circuits on rail vehicles. They offer protection class IP68/IP69K and ensure comprehensive protection in the event of electromagnetic interference fields.

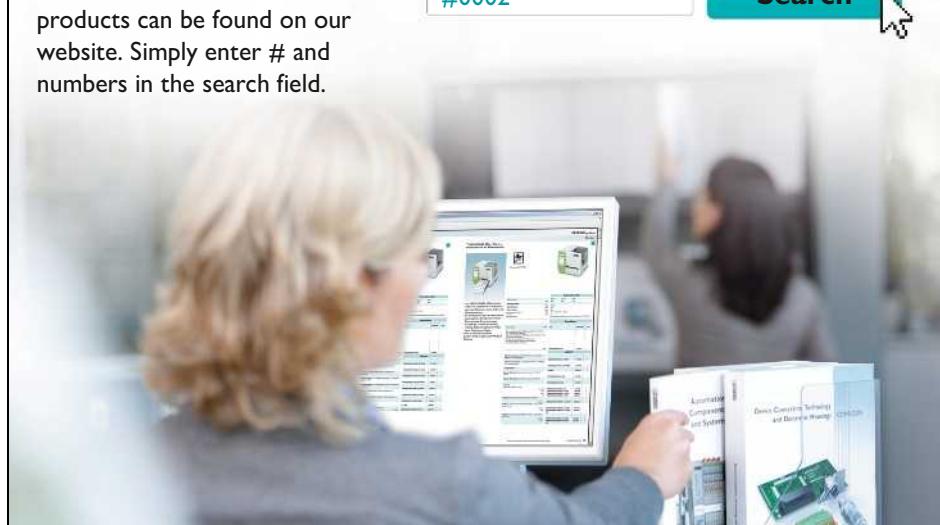

Stackable power distribution

DUPLICON stackable connectors are designed for distributed installation with the focus on power distribution. The connectors can be easily and flexibly integrated into modular machines and systems. Thanks to this stackable design, DUPLICON offers consistent installation, from the busbar in the control cabinet to the PCB in the field device, and can be extended by simply connecting further connectors.

Crimp contacts, gold-plated
phoenixcontact.net/products

**Replacement PE screws
From page 640**

Heavy-duty connectors

HEAVYCON B - contact inserts

B6 series

500 V, 16 A

Connection technology:

- Screw connection
- Push-in connection
- Insulation displacement connection
- Crimp connection

Notes:

- For accessories, see from page 634
- Order crimp contacts separately
- Only operate connectors when there is no load/the power is switched off
- For assembly instructions, see phoenixcontact.net/products
- For connection technologies, see page 4

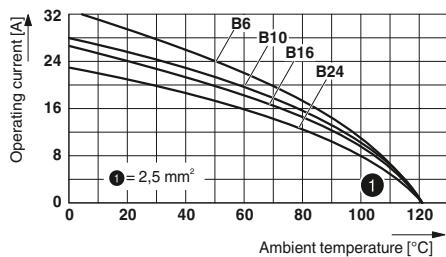

To determine the corresponding housing,
see cross-reference list on page 482.

Heavy-duty connectors

HEAVYCON B - contact inserts

HEAVYCON modular offers space and cost savings by combining several connectors into one. The modular inserts fit in HC-B size housings (HC-EVO, HC-STA, HC-ADV, etc.). Pin and socket modules can be freely combined and are polarized to prevent mismatching.

Lower and uppercase letters on the frames (A, B, .../a, b, ...) enable assignment on the cable and mounting side. The frames are available for 2 to 6 single modules. A double module requires the space of two single modules.

Docking frame		Floating (A, B, C, etc.) HC-B 16-ANDOCK-MOD-T Fixed (a, b, c, etc.) HC-B 16-ANDOCK-MOD-A	1587454 1587467	2	
Docking frame	B24	Floating (A, B, C, etc.) HC-B 24-ANDOCK-MOD-T Fixed (a, b, c, etc.) HC-B 24-ANDOCK-MOD-A	1587470 1587483	2	
Washer, floating		For M4 cylinder head screws HC-MOD-ANDOCK-USCH	1587496	20	

Notes:
Use of docking frames, e.g., in the back panel of control cabinet racks.
A metal mounting panel must be grounded separately, as the plastic frame does not have a PE connection.
Docking frames ensure correct contacting of plug and socket modules

Accessories

A small, rectangular metal dummy module with a slightly recessed front face and a flat base.

Dummy module
From page 569

A metal docking frame consisting of a rectangular base plate with two vertical posts extending upwards from its center, used for connecting modules.

Metal docking frame

Type J iron and constantan crimp contacts

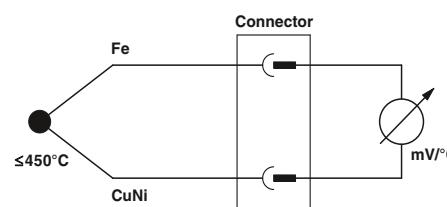

In hot runner injection molding machines, temperatures are often measured using iron/constantan thermocouples.

Iron/constantan elements are used for temperatures up to around 450°C.

When measuring the temperatures using iron/constantan elements, the control system is connected with iron/constantan conductors. The connection point of the iron or constantan conductor to a brass crimp contact of a connector would result in thermoelectric voltages that can falsify the measuring result. We therefore recommend using iron/constantan crimp contacts.

Iron/constantan crimp contacts can be used in contact inserts of the A / B / BB / HV series and in the HC-M-HV..., HC-M-06..., HC-M-08..., HC-M-20... modules.

A combination (standard contacts/thermo contacts) of crimp contact inserts is also possible.

Turned crimp contacts, for contact inserts:

HC-M-06, HC-M-HV, HC-M-08, HC-M-20, HC-B, HC-BB, HC-A, HC-HV

Technical data

FO crimp contacts

Notes:

For crimping pliers, assembly and removal tools, see 637

Fiber optics crimp contacts (980/1000 µm) are suitable for coupling fiber optic cables (polymer fiber optic cable). These can be used in the crimp contact carriers:

- VC-D (for turned contacts)
- HC M 12... / HC-M-17... / HC-M-03/04...
- HC-D... (for turned contacts) and
- HC-DD...

The optic fibers are polished, stripped, and then crimped.

Crimp contacts for fiber optic cables, polymer optic fibers (POF)

CRIMPFOX crimping pliers for turned contacts

- The integrated positioning tool ensures that the contacts are perfectly aligned in the die
- Marked die stations for precise processing of the relevant cross sections

Notes:

For replacement dies and retaining springs, go to the product area on the website at phoenixcontact.net/products.

Conductor cross section of 0.5 - 4 mm²

Conductor cross section of 6 - 10 mm²

Application range	mm ² / AWG
Conductor	
Compression	

Description
Crimping pliers , for turned contacts with a pin diameter of 1.6 / 2.5 / 4.0 mm
- For CK1,6-ED ... , CK2,5-ED... CK4,0-E D... 0.5-4 mm ² turned contacts
- For CK4,0-ED...6 - 10 mm ² turned contacts

Removal tool
- For CK1,6-ED.../CK1,6-ER.../CK1,6...POF contacts
- For CK2,5-ED... contacts
- For CK4,0-ED... contacts

CRIMPFOX universal pliers for accommodating various crimp inserts

- One of the key features of the CRIMPFOX-M crimping pliers is the way the crimp inserts can be quickly replaced without the need for tools

Notes:

For more crimping dies for ferrules, cable lugs, slip-on sleeves, turned contacts, coaxial, RJ45, and RJ11 connectors, visit phoenixcontact.net/products

Basic pliers

Plug	HC-K 6 PE 16 QMM M	1583870	25

Strain relief clamps

Cable trees with crimp contacts must not put a strain on the engaged contacts with their weight.

This is avoided by the use of strain relief clamps.

Lateral cable outlet

Straight cable outlet

DUPLICON stackable power distribution

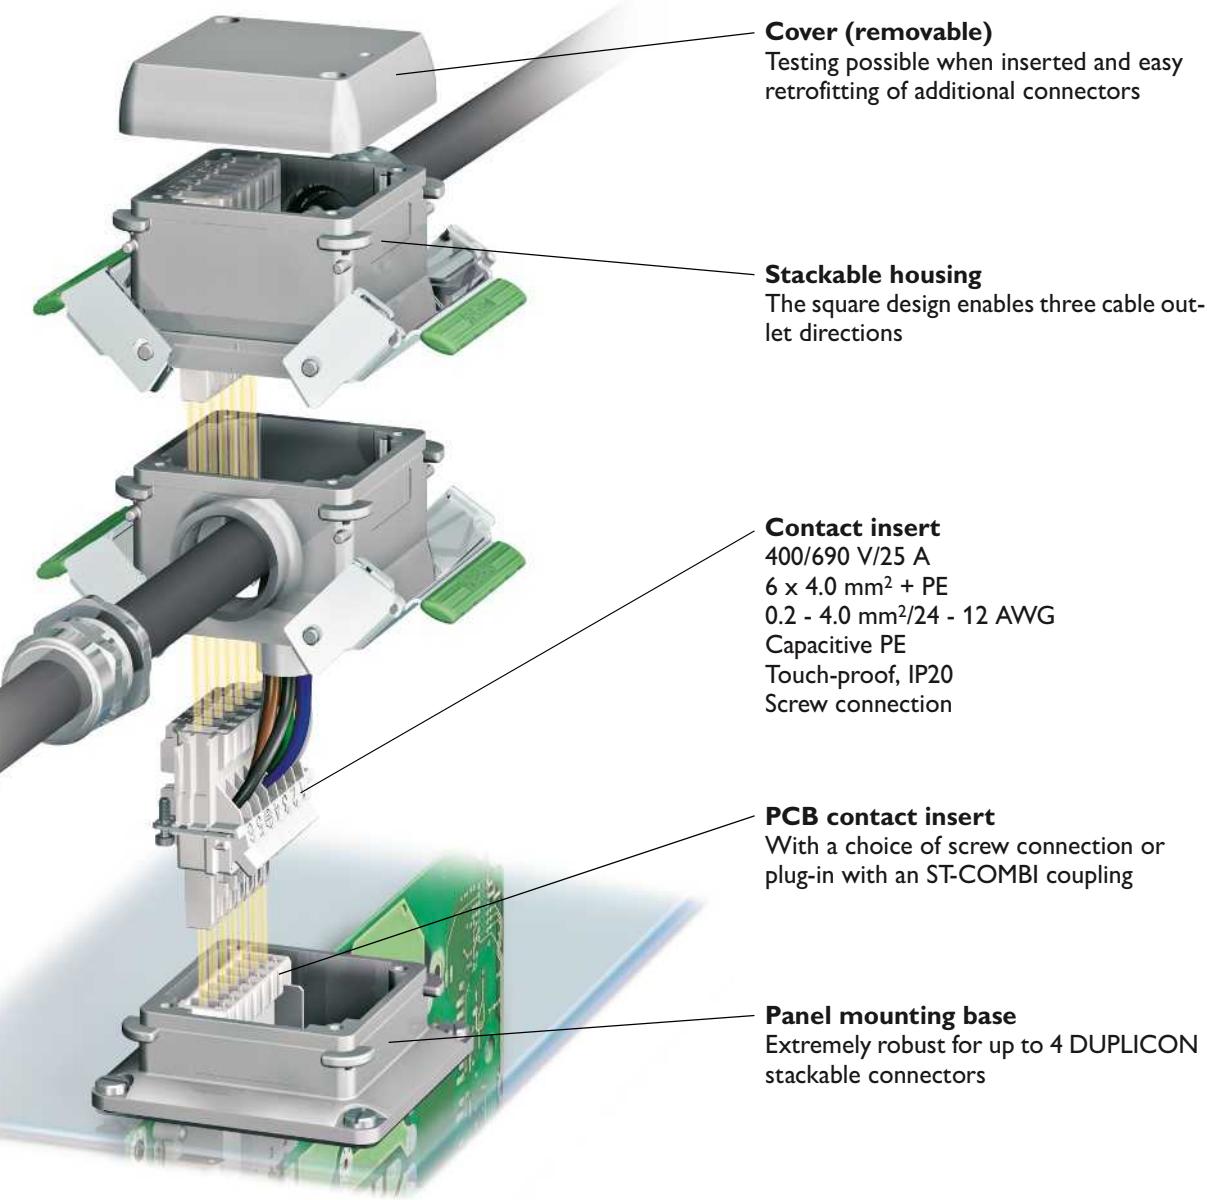

DUPLICON is a consistent power distributor system for $6 \times 4 \text{ mm}^2 + \text{PE}$ conductors (25 A/400/690 V), from the busbar to ST-COMBI in the control cabinet right up to the PCB or plug-in connection on the power load. The system has a minimum of components and handling is extremely flexible. The robust metal housings with vibration-resistant locking latches means that DUPLICON is qualified for the harshest operating conditions.

The design meets the requirements for IP67 protection. The contact inserts have a capacitive PE contact and the screw connections can be assembled using standard tools. DUPLICON acts as an interface between the control cabinet and the device or actuators/drives. With additional connection options of 24 V or two-wire bus lines for AS-i or PROFIBUS,

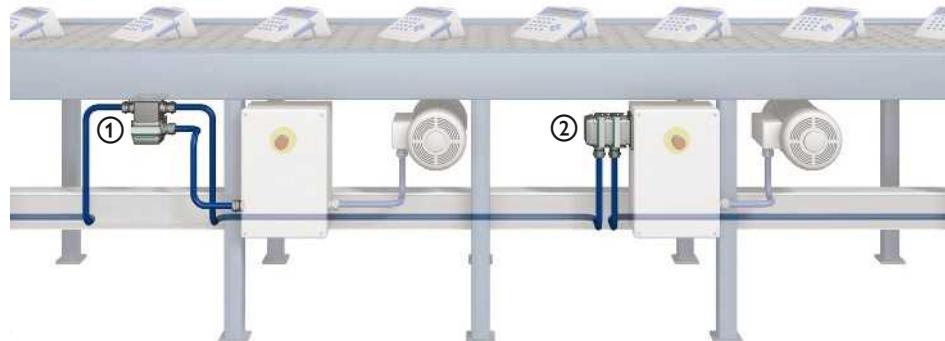

DUPLICON also provides a connection to the signal world, which opens up a broad range of possible applications.

Thanks to the plug-in design, all cables can be conveniently assembled in the workshop and quickly connected together in the system. All connections are touch-proof according to DIN VDE 0105 and meet the requirements of BGV A2 accident prevention regulations.

i Your web code: #0004

Stationary power distribution

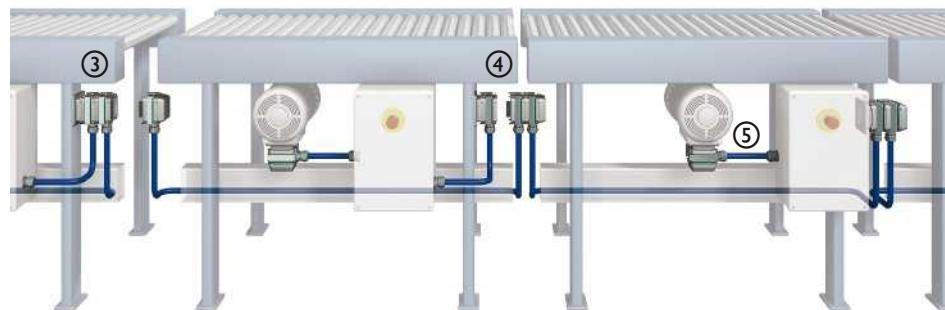

There are essentially two DUPLICON options for stationary power distribution:

- ① Using the T-box, which is installed permanently next to the power load and has a plug-in cable outlet.
- ② Using a stackable device connection. Direct device connection is always the best

option, but this requires design-based integration.

The main advantages are separate plug-in capability of the cables during startup and uninterrupted device replacement during future servicing.

Modular power distribution

③ Your power distribution can be configured in advance, thanks the stackable design. Plug and Play ensures quick and reliable startup.
 ④ During servicing, the main power cable is disconnected from the load without causing any interruption and the system continues running.

⑤ DUPLICON is also suitable for use as a motor connector. The square design enables different cable outlet directions and the vibration-resistant locking mechanism can withstand the harshest operating conditions.

The modular contact inserts offer a wide range of possible applications.

Cable routing options

With hybrid cables

In the classic and simplest case, one cable is introduced per stackable housing. With the aid of an M25 adapter screw connection, cables with a diameter of up to 21 mm can be connected.

With separate cables

The cable glands with two holes allow thin power and 24 V cables to be routed separately into stackable housing.

With opposing cables

Housings with two cable entries allow cables with larger diameters or combinations, e.g., with AS-i cables or PROFIBUS, to be routed in.

Heavy-duty connectors

DUPLICON stackable power distribution

Connector sets

Suitable standard and EMC cable glands can be found in the Installation and mounting material section.

Notes:

Cable glands, see starting with page 680

Heavy-duty connectors

DUPLICON stackable power distribution

Contact inserts

With the stackable contact inserts, the power conductors for modular mechanical and plant engineering can be pre-assembled and combined on-site to form power distributors quickly, easily and reliably.

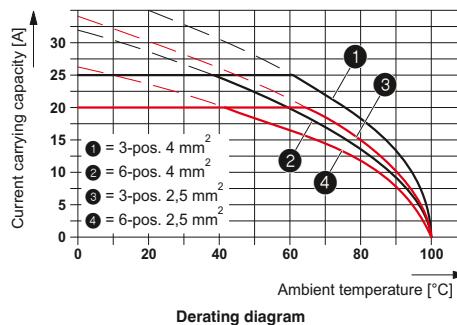

The T-Box contact insert is predestined for stationary installations. With two connections per position, it serves to loop through power conductors on site. Compared to the DUPLICON 3-way distributor, the T-Box connectors save 20% on height and permit one to dispense with a full set of stackable connectors.

DUPLICON is the first IP67 connector that can be tested from the outside while it is plugged in. All that is necessary is to unscrew both screws in the cover; after which all the contacts will be immediately accessible to conventional testing devices. For safety reasons, all the contacts are IP20 touch proof in acc. with DIN VDE 0105.

Note:

Coding stars with 4 coding branches are available for the purpose of coding several connectors of the same kind against being plugged in incorrectly, Order No. [3040588](#).

EB 2-6 dual insertion bridges with a 2 mm pitch (Order No. [0201155](#)) are available for bridging two adjacent connections.

Motor connector, hinged retaining frame

DUPLICON Modular has been designed for use in drives in the power distribution field. The square-shaped housing allows flexible cable outlet directions and the absolutely vibration-free locking latch can withstand the roughest of conditions. The requirements as per railway standard EN 50155 are markedly overshot.

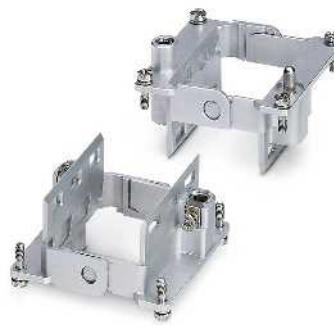

The modularity of contact inserts from the HEAVYCON field offers numerous applications.

The hinged retaining frames have been designed with leading PE contacts and can accommodate up to 3 contact insert modules.

The housings have one or two conductor entries in different sizes, depending on the type of cable entry.

Notes:

For contact insert modules, see from page: 548

Installation and mounting material

Cable entry systems are in demand as an efficient alternative to heavy-duty connectors and cable glands. They can be used to route assembled cables directly into the control cabinet, to devices, and onto DIN rails without an additional plug-in connection. With the CES cable entry system, Phoenix Contact offers a well-designed system solution from system and field cabling to the DIN rail.

Plug assembly frames from Phoenix Contact can be easily mounted on standard DIN rails and so save entire jumpering levels in the control cabinet. They accommodate pre-assembled contact inserts and can be combined with HEAVYCON STANDARD sleeve housings. Thanks to the robust, conductive die-cast aluminum design, capacitive PE contact is ensured.

Clear and permanent marking of all cables and distributor boxes considerably improves transparency in control cabinets and systems. It makes assembly and maintenance work easier and assists in rectifying faults. Phoenix Contact cable marking systems provide the ideal marking option for any application. Just select an assembly method. The markers can be threaded on, clipped on, adhered in place or secured with cable binders.

Installation and mounting material

CES cable entry system

Sealing frames for cable sleeves

- Sealing frame with integrated metal reinforcement to protect against deformation
- Only two locking elements are required (screws or latch)
- Suitable for standard panel cutouts (e.g., Rittal)
- Snap-on frame for simplifying on-site installation
- Sealing frame with convenient locking latch for tool-free actuation
- Marking for cable sleeve location on the underside of the frame

Notes:

For dimensional drawings, see page 675

If the panel cutout width is 51 mm, HC industrial connectors and CIF plug assembly frames can also be fed through the panel using the cable entry system (CES).

Cable sleeves, IP65, without bore hole, can be used in sealing frames with locking latch and screw locking							
	gray	CES-STPG-GY	0801715	10	CES-LTPG-GY	0801716	10

Cable sleeves, thermoplastics, special formats

Advantages:

- Low flammability according to UL 94 V0 of thermoplastic sleeves
- Good resistance to acids and lyes

Notes:

The CES cable entry system was developed according to DIN EN 50262 (Cable glands for electrical installations).

The cable sleeves must be mounted in accordance with the mounting instructions provided.

Cable sleeves, small, with several bore holes

Cable sleeves, small, for AS interface cables

General data

Material	SEBS

new

CES Multigates cable feed-through

Cable feed-throughs for housing and control cabinets.

Advantages:

- Space-saving feed-through of up to 37 cables
- High degree of protection thanks to double membrane sealing
- Quick installation of unassembled cables
- Suitable for cables sizes from 5 mm to 60 mm
- Flame-retardant and oil-resistant (black material)

Installation and mounting material

Cable feed-throughs

Cable feed-throughs

The conduits make IP54-rated sealing possible when leading preassembled conductors into the control cabinet.

This is done by pushing the slit sleeves over the conductor, positioning them and placing them in the cable feed-through housing.

Unused feed-through positions are filled with filler plugs.

Conduit/cable feed-through sleeves

Connector assembly frame

Notes:

The bridging function of the aluminum design ensures that there is a leading PE.
Stainless steel locking latch, handle: PA-GF
Upon delivery, there is no pre-assembled bracket (HC-CIF..BFWD..). The bracket is assembled after the contact insert.

Base frame/top frame

Advantages:

- For standard HEAVYCON contact inserts on NS35/7,5 DIN rail
- Robust cast aluminum housing
- Base frame for pre-assembled contact inserts
- Cable duct function
- Grounding for DIN rail
- Coding function

Installation and mounting material

Marking systems, tools, and mounting material

Cable marking

The cables are supplied with marked marking collars. Suitable marking materials are available for each marking system.

Distributor box marking

High-quality marking materials for individual marking of distributor boxes are available for each marking system.

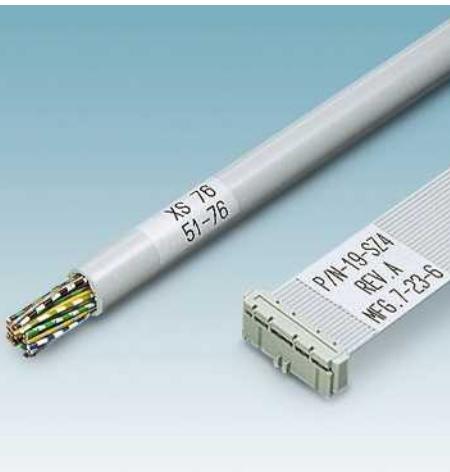

Connector marking

Marking materials ranging from adhesive labels to high-quality engraved labels are available for marking heavy-duty connectors.

**Cable markers**

Markers can be fitted using cable binders almost regardless of cable diameter. The large marking area provides enough space for comprehensive marking.

**Cable marker labels**

Cable marker labels consist of a marking field and a transparent film that protects the marking against abrasion and dirt.

**Plastic cable markers**

Plastic cable markers are suitable for bundling and marking cables. The marking is protected against dirt and can be replaced.

**Cable protection**

The comprehensive range of plastic and metal protective hoses offers the right solution for every application. Protective hose screw connections with tool-free quick mounting function and various IP protection classes round off the range of products.

Plug-in charging systems for E-Mobility

Phoenix Contact E-Mobility offers a product and technology portfolio that enables the flexible, modular, and efficient implementation of various concepts for the charging infrastructure for different business models. Whether charging on an AC power grid or rapid DC charging – the AC and DC charging systems from Phoenix Contact are safe, reliable, and user-friendly.

Product range overview	714
DC charging cables	716
AC charging cables	718
Mobile AC charging cables	722
Infrastructure Socket Outlets	726

The development of a widespread charging infrastructure in conjunction with renewable energy is an important step toward a mobile future. Internationally standardized charging systems are used to establish an electrical connection between the electric vehicle and the infrastructure (e.g., a charging station). In terms of the charging interfaces required, a distinction is made between:

- Vehicle inlets
- Infrastructure Socket Outlets
- Charging cables with Vehicle Connectors, Infrastructure Plugs, and integrated IC-CPD control units

International standards ensure uniform connection for charging stations and vehicles:

- Type 1 according to SAE J1772 and IEC 62196 (USA, Japan)
 - Type 2 according to IEC 62196 (Europe)
 - GB/T 20234 standard (China)
- The charging systems from Phoenix Contact offer reliable, standard-compliant solutions for a consistent charging interface for all applications.

This is implemented, for example, with the Combined Charging System (CCS), which was developed by major German automobile manufacturers in cooperation with Phoenix Contact. The electric vehicle can be charged conventionally with AC at home, for example. In addition, the vehicle-side inlet is also designed for rapid DC charging. Only short stops are required for the charging process - e.g., at rest stops when on the road.

**AC type 1**

AC charging system Type 1 is based on the SAE J1772 and IEC 62196 standard. It is primarily used in the USA and Japan. The lock is implemented using a lever system.

**AC type 2**

The type 2 AC charging system, developed for Europe, is designed according to the IEC 62196-2 standard. It supports single- and three-phase charging. An electromechanical actuator lock safeguards the charging process.

**AC GB/T**

The AC charging system standardized according to the Chinese GB/T standard supports both single and three-phase charging. Charging takes place securely thanks to a special lever system.

**DC CCS type 1**

In the USA, the type 1 DC CCS charging system is used for fast DC charging, according to SAE J1772 and IEC 62196-3. The lever locking mechanism is also supported by an additional actuator lock.

**DC CCS type 2**

In Europe, the type 2 DC CCS charging system is the vanguard for rapid DC charging according to IEC 62196-3. The electromechanical actuator lock prevents premature removal during the charging process.

**DC GB/T**

The DC charging system for China is based on the GB/T standard. It offers rapid DC charging for Chinese charging stations. The locking mechanism is integrated in the Vehicle Connector.

Plug-in charging systems for E-Mobility

DC charging cables

Combined charging system (CCS)

DC charging cables type 1 and type 2

The CCS DC charging cables with open cable end are connected directly to a DC charging station. They are suitable for fast DC charging of electric vehicles.

The CCS Vehicle Connector is compatible with the CCS Vehicle Inlet, which also accommodates an AC Vehicle Connector.

Notes:

Further cable types and lengths are available on request.

Color variants for housing and cables are available on request.

DC charging cable with Vehicle Connector and open cable end, Combined Charging System (CCS)

DC charging cables GB/T (China)

DC GB charging cables with open cable end are installed in Chinese charging stations with a stationary AC/DC converter. They are suitable for fast DC charging of electric vehicles.

An innovative locking mechanism is integrated in the Vehicle Connector for secure locking during the charging process.

Notes:

Further cable types and lengths are available on request.

Color variants for housing and cables are available on request.

All Vehicle Connectors are supplied with a protective cap.

Mobile AC charging cables

Type 2 (mode 3)

The mobile AC charging cables enable electric vehicles to be charged with alternating current at European charging stations or wall boxes at home and while on the move. They can easily be stored inside the vehicle.

Notes:

Further cable types and lengths are available on request.

Color variants for housing, cables, and customer-specific labels available on request.

All Vehicle Connectors and Infrastructure Plugs are supplied with a protective cap.

AC charging cable with GB/T Vehicle Connector and
GB/T Infrastructure Plug

Mobile AC charging cables type 1 and type 2 (mode 2)

The mobile AC charging cables with In-Cable Control and Protection Device (IC-CPD) enable electric vehicles to be charged with alternating current at a normal, European socket at home and while on the move. The components for standardized communication with the vehicle as well as the safety equipment are integrated in the IC-CPD.

Notes:

Color variants for housing, cables, and customer-specific labels available on request.

All Vehicle Connectors are supplied with a protective cap.

Infrastructure Socket Outlets

AC Infrastructure Socket Outlets GB/T and Type 2

Single or three-phase charging is possible with the standardized Infrastructure Socket Outlets for charging stations or wall charging stations. Up to 22 kW of power can be transmitted when a mobile AC charging cable is connected.

Notes:

All Infrastructure Socket Outlets can be mounted on the housing panel from both the front and the rear (see below).

As an option, the AC Infrastructure Socket Outlet Type 2 can be secured with a hinged cover or a panel mounting frame for both front and rear panel mounting.

Quality in quantity

Integrated management system

The aim of the Phoenix Contact integrated management system is to coordinate all the requirements regarding products, processes, and organization.

Statutory and regulatory requirements, as well as those of international standards and our customers, are met and, in some cases, even exceeded in all phases of the product lifecycle.

The Phoenix Contact management system is monitored by internationally recognized independent bodies each year to ensure that quality, environmental protection, energy efficiency, and occupational safety have been integrated in conformance with the relevant requirements. Certification in accordance with international standards ISO 9001, ISO 14001, ISO 50001, and BS OHSAS 18001 is the result of our corporate philosophy of meeting the needs of our customers, staff, and environment as best as possible. They serve as the basis for innovative products with the familiar high Phoenix quality standard, actively practiced environmental protection through efficient production and products that conserve resources, and responsibility in the field of occupational health and safety. It goes without saying that we integrate all further requirements of standards, international approvals or special customer requirements into our company processes.

This system provides a building block for the success of the Phoenix Contact Group and its products and services.

CE marking

CE marking was introduced as an important instrument for the free movement of goods and services within the single European market. By attaching the mark to a product, the manufacturer confirms that it complies with all applicable European Union (EU) directives. EC directives describe the product properties with regard to device safety and avoiding danger. These are legally binding regulations of the European Union (EU). In other words, compliance with the requirements is a **statutory condition for marketing the product within the EU**.

Where applicable, the products that our company currently manufactures fall within the scope of the following directives:

- 2006/95/EC and 2014/35/EU Electrical equipment designed for use within certain voltage limits (Low-Voltage Directive)
- 2004/108/EC and 2014/30/EU Electromagnetic compatibility (EMC Directive)
- 2004/22/EC and 2014/32/EU Measuring instruments
- 2006/42/EC Safety of machinery (Machinery Directive)
- 94/9/EC and 2014/34/EU Equipment and protective systems intended for use in potentially explosive areas (ATEX Directive)
- 1999/5/EC R&TTE Directive and 2014/53/EU Radio Equipment Directive

The standards upon which the specified directives are based have been part of our standard of development for a long time. This guarantees conformance with European directives. The numbers of the directives indicate their version at the time of publication. In the event of changes to directives and/or standards, our products will undergo conformity assessment again in good time and a new declaration of conformity will be issued promptly. The current declarations for each product can also be found in our download area.

The EMC Directive occupies a special place among the European directives listed. It defines electromagnetic compatibility as a fundamental property of devices based on mandatory guidelines. European Law therefore acknowledges the electromagnetic compatibility of devices and systems as an important condition for error-free operation of machinery and systems. Phoenix Contact is one of the leading international companies in surge protection, and therefore possesses broad expertise in EMC. This expertise and the experience gained over years of developing and applying industrial interface and communication technology have resulted in our products having an extremely high standard of quality with regard to electromagnetic compatibility. It was with a view to providing other companies with this expertise that our associate company, Phoenix Testlab, was founded.

Phoenix Testlab GmbH is an independent, accredited service provider offering EMC testing that conforms to European standards. At Phoenix Testlab, devices are also tested with regard to their electrical safety, mechanical influences, and their behavior in relation to environmental influences. Furthermore, Phoenix Testlab is a "Notified Body" in accordance with EMC Directive 2004/108/EC and according to R&TTE Directive 1999/5/EC for

radio and telecommunications terminal equipment. As a "Telecom Certification Body" (TCB), Phoenix Testlab may also approve these products for markets in the USA, Canada, and Japan.

Standards and regulations

All relevant standards and regulations are used as the basis for the development and maintenance of our products.

International standards are subject to continuous changes as a result of harmonization and new developments. In line with this process, the current version of all standards that are relevant to our products is documented in the product area on our website at www.phoenixcontact.net/products.

Online product information service on the web

Phoenix Contact's product range is growing constantly.

Due to our commitment to product monitoring, all products are subject to improvement.

The Internet is an ideal platform to quickly communicate new product developments and improvements to the market.

You can quickly access the relevant Phoenix Contact website for your region via www.phoenixcontact.com. Here, you will always find the latest overview of products, solutions, and services from Phoenix Contact. This includes technical documents, such as data sheets and user manuals, the latest driver and demo software, plus a means of contacting the appropriate contact person directly.

Connection cross section

IEC 60947-7-1/-2

The connection capacity for connectors and PCB terminal blocks is documented in the technical data. The connection capacity defines the conductor cross section which can be connected for conductors in solid (single and multi-strand) or stranded (fine-strand) versions. Cross section ranges are also specified for the use of ferrules. In addition, ranges where two conductors in solid and stranded versions are to be simultaneously connected are also mentioned.

Phoenix Contact PCB terminal blocks and PCB connectors are designed to allow copper conductors to be connected to them untreated. "Special treatment" or the use of ferrules is not required. "Special

treatment" includes tin-plating the litz wires of a conductor, using cable lugs, bending the eyes, etc. However, it does not include straightening the conductor before inserting it into the terminal block or twisting a stranded conductor in order to consolidate its ends.

If ferrules are nevertheless used to protect stranded conductors against splicing, the connection capacity of the stranded conductor is generally reduced by one level. Conductors must not be soldered ("soldering all litz wires of a conductor together").

It is always recommended that you use Phoenix Contact CRIMPFOX crimping tools to crimp ferrules.

Tightening torque of terminal block screws

DIN EN 60947-1

Table 4 of the standard specifies the tightening torque to demonstrate the mechanical strength of screw connections/screw terminal blocks.

These torques are sufficient for connecting conductors with Phoenix Contact terminal blocks.

The table opposite lists recommended tightening torques which differ from those in this standard and which will ensure gas-tight connections with long-term stability.

Phoenix Contact torque screwdrivers can be set to the corresponding torques.

Note:

Subject to changes that serve the purpose of technical progress.

Extract from DIN EN 60947-1/EN 60947-1, Table 4

The torque according to IEC/EN and the recommended tightening torque for Phoenix Contact terminal blocks are specified.

Head screw with slot

Color designations

EMC: Class A product:

In accordance with statutory regulations, our products are indicated with this footnote if they are intended for use in industrial environments. This means that the permitted limit values for residential applications may be exceeded in the event of conducted and emitted disturbance variables. In such cases, the operator may have to take additional safety measures in order to ensure electromagnetic compatibility in residential applications.

Shock protection

Example: pressure actuation

The accident prevention regulations BGV A 2 issued by the German employer's liability insurance association for precision mechanics and electrical engineering apply to the operators of electrical systems and are aimed at the prevention of electrical accidents by means of special safety requirements.

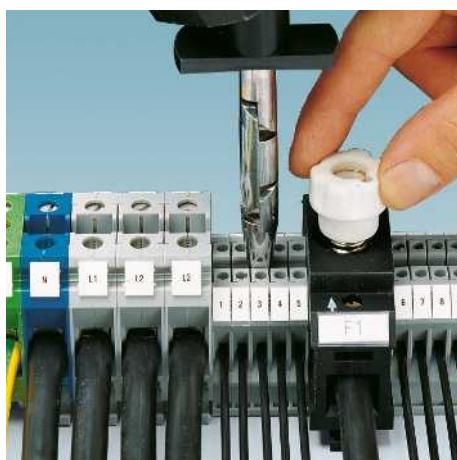

These regulations contain specifications regarding the safety distances for work, operation, and occasional handling in the proximity of "live parts" in low-voltage systems up to 1000 V ~ or 1500 V –.

- Work with live parts is only permitted once they have been de-energized.
- Operational activities are only permitted in the vicinity of live parts if these parts are de-energized or are protected against direct contact (§ 6). The following safety measures apply when working in the vicinity of live parts:
- Provision of the de-energized state for the duration of the work
- Ensure shock protection is in place in the form of covers or barriers during the work
- Assurance that proximity limits will not be violated (§ 7)

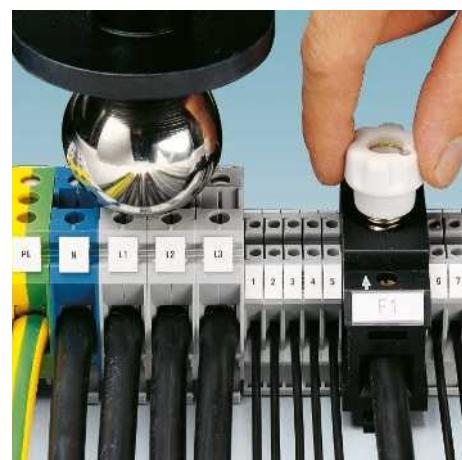

The term "occasional handling" has been introduced for the operation of elements such as pushbuttons, rocker arms or rotary buttons in the proximity of live parts.

According to VDE 0105-1, this is covered by "operation with partial protection against direct contact".

Detailed specifications for "occasional handling" can be found in DIN VDE 0106-100. This specifies to what degree live parts in the proximity of operating elements are to be protected against contact. The basis for this is the definition of a "protection area for occasional handling"; this is the area into which the user must reach in order to handle the machine.

Finger safety

Back of hand safety

The most important thing is that an area formed by an even envelope curve 30 mm in radius must surround the live parts. This area must be **touch-proof**, i.e., the live parts of the electrical device must not be within reach of the VDE test finger according to IEC 60529/DIN VDE 0470-1 (test finger).

Back of hand safety is specified for the "rest of the area" up to 100 mm around the operating element. **Back of hand safety** means that when a force of 50 N is applied to a ball with a diameter of 50 mm, this does not come into contact with the live parts of the equipment. No special measures for ensuring contact safety are stipulated outside this area.

Note: systems and equipment that are operated with SELV up to 25 V ~ or 60 V – are considered to be protected against "direct contact".

According to § 5, Subsection 4 of the BGV A 2 regulations, there is no need to test the condition of the system prior to initial start-up if the company has confirmation from the manufacturer or installer that the electrical systems and equipment conform to BGV A 2. The confirmation required relates to systems and equipment that have been installed and are ready for operation and can only be issued by the installer or installation company. The manufacturer of the electrical equipment can only issue a confirmation that products have been produced in accordance with the relevant electro-technical DIN VDE regulations stipulated in BGV A 2. The installer must bear this in mind when selecting the equipment to be used.

In the field of connection technology, Phoenix Contact offers a wide range of products which are touch-proof or can be protected against contact by means of covers. Depending on the conditions, all of this

must be taken into account when selecting the individual types of terminal blocks and accessories.

Degrees of protection according to DIN EN 60529

Definition:

IP (Ingress Protection) protection according to DIN EN 60529 is defined by two digits (e.g., IP54), the meaning of which is explained in the following tables.

Degree of protection against access to dangerous parts and against solid foreign objects

First digit	Short description	Example	Definition
0	Not protected		Protected against touching dangerous parts with the back of the hand. Protection against ingress of solid foreign objects with $\varnothing > 50$ mm.
1	Protected against solid foreign objects		Protected against touching dangerous parts with a finger. Protection against ingress of solid foreign objects with $\varnothing > 12.5$ mm.
2	Protected against solid foreign objects with $\varnothing 12.5$ mm or more		Protected against touching dangerous parts with a tool. Protection against ingress of solid foreign objects with $\varnothing > 2.5$ mm.
3	Protected against solid foreign objects with $\varnothing 2.5$ mm or more		Protected against touching dangerous parts with a wire. Protection against ingress of solid foreign objects with $\varnothing > 1$ mm.
4	Protected against solid foreign objects with $\varnothing 1$ mm or more		Protected against touching dangerous parts with a wire. The ingress of dust is not completely prevented, but dust may not enter in such an amount that the satisfactory operation of the device or its safety is impaired.
5	Protected against dust		Protected against touching dangerous parts with a wire. No ingress of dust.
6	Dust-proof		

Degree of protection against water

Second digit	Short description	Example	Definition
0	Not protected		Vertically falling drops shall have no effect.
1	Protected against dripping water		Vertically falling drops shall have no effect if the housing is inclined at an angle of up to 15° either side of the perpendicular.
2	Protected against dripping water if the housing is inclined at an angle of up to 15°		Water that is sprayed at an angle of up to 60° either side of the perpendicular shall have no harmful effect.
3	Protected against spray water		Water that splashes against the housing from any direction shall have no harmful effect.
4	Protected against splash water		Water that is directed as a jet against the housing from every direction shall have no harmful effect.
5	Protected against jet water		Water that is directed as a strong jet against the housing from every direction shall have no harmful effect.
6	Protected against powerful jet water		Water may not penetrate in a harmful quantity when the housing is temporarily submerged in water under standard pressure and time conditions.
7	Protected against the effect of temporary submersion in water		Water may not penetrate in a harmful quantity when the housing is submerged in water continuously under conditions to be agreed between the manufacturer and user.
8	Protected against the effect of continuous submersion in water		Water that is directed against the housing under extremely high pressure from every direction shall have no harmful effect. (Example: IP69K according to DIN 40050 Part 9)
9K	Protected against water during high-pressure and jet-stream cleaning		

For safety reasons, electrical equipment must be protected against external influences. This is the job of the housing, which protects electrical equipment against contact, ingress of solid objects, dust, and moisture.

The following table contains possible combinations of degrees of protection according to DIN EN 60529 which can be practically applied to housing.

		Protection against water	No protection	Protection against vertically falling dripping water	Protection against dripping water if the housing is inclined at an angle of up to 15°	Protection against spray water from all directions, even when inclined at an angle of up to 60°	Protection against splash water from all directions	Protection against powerful jet water from all directions	Protection against temporary submersion	Protection against the effects of continuous submersion in water	Protected against water during high-pressure and jet-stream cleaning (DIN 40059-9)
Shock protection	Foreign object protection										
No shock protection	No protection against solid foreign objects	IP0x	IP00								
Back of hand safety	Protection against solid foreign objects > 50 mm Ø	IP1x	IP10	IP11	IP12						
Touch-proof	Protection against solid foreign objects > 12.5 mm Ø	IP2x	IP20	IP21	IP22	IP23					
Protection against touching with tools, wires, etc. > 2.5 mm Ø	Protection against solid foreign objects > 2.5 mm Ø	IP3x	IP30	IP31	IP32	IP33					
Protection against touching with tools, wires, etc. > 1 mm Ø	Protection against solid foreign objects > 1.5 mm Ø	IP4x	IP40	IP41	IP42	IP43	IP44				
Protection against touching with tools, wires, etc. > 1 mm Ø	Protection against harmful dust accumulations inside the device	IP5x	IP50				IP54	IP55			
Protection against touching with tools, wires, etc. > 1 mm Ø	No ingress of dust	IP6x	IP60					IP65	IP66	IP67	IP68
											IP69K

(IPx7)

Quality features of insulation material

Our insulating housings are made from various thermoplastic materials. Depending on the application, the best-suited material is selected based on its electrical and mechanical properties.

All plastics used by Phoenix Contact are RoHS-compliant.

All plastics used at Phoenix Contact have been listed with UL (Underwriters Laboratories Inc.) in the USA.

Behavior of plastics under the influence of temperature (operating temperatures)

All plastics undergo thermal aging when they are subjected to heat over long periods. This process causes changes in the mechanical and electrical properties of the material. External influences, e.g., radiation, additional mechanical, chemical or electrical stresses, amplify this effect. All characteristics included in the table have been determined based on samples which provides a good means of drawing comparisons between different materials. However, applying these characteristics to an evaluation of molded plastic parts is only possible to a limited extent, and can only give the designer a rough guide when it comes to selecting a plastic material. This catalog uses RTI Elec. according to UL 746B as an assessment criterion for temperature resistance.

Insulation materials

Polyamide: PA and PA-GF

Polyamide has excellent electrical, mechanical, and chemical properties even at high operating temperatures. Brief peak temperatures of up to approximately 200°C are permitted as a result of heat aging stabilization. The absorption of water makes the plastic flexible and resistant to breakage, even at low temperatures.

Fiber-reinforced polyamides feature greater rigidity and hardness as well as operating temperatures higher than those of non-reinforced materials.

Polyamide for high-temperature applications: PA HT and PA-GF HT

Special high-temperature-resistant types of polyamide are used in non-reinforced or fiberglass-reinforced versions for reflow applications. These high-temperature polyamides combine the excellent electrical properties of polyamide and the

requirements of the reflow soldering process for temperature resistance.

Liquid crystal polymers: LCP GF

LCP combines high temperature stability with excellent dimensional stability and creepage resistance for products used in reflow processes. LCP has exceptional mechanical properties across a wide temperature range and a very low thermal expansion.

Polyester: PBT and PBT-GF

We use thermoplastic polyester in non-reinforced and fiberglass-reinforced versions for special applications which require increased dimensional and form stability.

In addition to the high operating temperature, the material is characterized by excellent mechanical stability, hardness, and excellent notched impact strength. PBT does not absorb moisture from its surroundings. PBT is therefore particularly suitable for strips, for example, which are soldered onto PCBs.

Polycarbonate: PC

Polycarbonate combines many advantages such as rigidity, impact strength, transparency, dimensional stability, good insulation properties, and resistance to heat.

The amorphous material only absorbs moisture to a very limited degree, and is used for items such as large, rigid electronic component housing.

In its transparent form, polycarbonate is particularly suitable for use as a material for cover profiles or marking materials.

Acrylonitrile butadiene styrene: ABS

We use ABS for products which must have good impact and notched impact properties in addition to high mechanical stability and rigidity. The products are also characterized by their special surface quality and hardness.

ABS is suitable for coating metal surfaces, e.g., nickel.

Polyvinyl chloride: PVC

While most thermoplastic materials are processed with injection molding using ready-to-use molding and extrusion material, PVC is processed as a powder in the extruder. This is why it is used in our profile products. PVC is also self-extinguishing without flame protection and

has high mechanical strength but is notch-sensitive.

Polyoxymethylene: POM

Polyoxymethylene is a technical material that combines high rigidity with mechanical stability, excellent elastic properties, high tenacity, dimensional accuracy, and exceptional sliding friction behavior.

Polyethylene: PE

Polyethylene is characterized by excellent chemical resistance and electrical insulation properties. PE is thermoplastic and can therefore be processed using almost all procedures. Furthermore, PE has excellent tenacity even at low temperatures and a good elongation at break.

Polypropylene: PP

PP has higher rigidity, hardness, and stability and is more heat-resistant than PE. PP is not as tough at low temperatures, however.

Thermoplastic polyurethane: TPU and TPU-GF

TPU is characterized by excellent electrical properties, a good surface feel, a high degree of flexibility over a wide temperature range, and high resistance to wear. Thermoplastic polyurethanes are also elastic and low-temperature impact resistant.

In contrast to non-reinforced materials, fiberglass-reinforced TPU is characterized by high rigidity and hardness.

Cross-linked ethylene-propylene-diene polymer/polypropylene: EPDM-PP

EPDM-PP is a polymer blend of PP and cross-linked EPDM. EPDM-PP is a rubber-like material which can be processed using thermoplastic procedures. EPDM-PP combines high temperature resistance, a low compression set, and excellent resistance to abrasion and chemicals.

Acrylonitrile butadiene styrene rubber: NBR

NBR is a rubber with excellent resistance to aging. It also features excellent resistance to abrasion and low plastic flow. Its elasticity is lower than other rubbers.

Fluorinated rubber: FPM

FPM rubbers are characterized by very high temperature resistance, but behave less favorably at low temperatures than other rubbers.

Chlorine-butadiene rubber: CR

CR rubber stands out against other rubbers with its excellent resistance to weather and ozone.

* The irradiated PUR version is generally more resistant than the non-irradiated version. This cannot be quantified and must be checked in individual cases.

The information in the table has been gathered from the recommendations of our plastic suppliers.

Since individual operating conditions can also affect the usability of each product, this information should be used as a guide only.

For applications where no prior experience exists, we recommend that the user carries out preliminary tests.

Insulation coordination for electrical equipment within low-voltage systems

Dimensioning of clearances and creepage distances according to DIN EN 60664-1/VDE 0110-1.

This part of the standard, based on IEC 60664, contains specifications for the insulation coordination of equipment in low-voltage systems. This part is applicable for equipment to be used at an altitude of up to 2000 m above sea level. This basic safety standard is primarily aimed at technical committees, and if suitable product directives are not available for equipment, it can be applied at the user's own responsibility. International and European product standards cited in this catalog contain specifications for insulation coordination according to DIN EN 60664/VDE 0110-1.

Insulation coordination

Insulation coordination includes the selection of electrical insulation properties for equipment as regards intended applications and ambient conditions. Separate requirements must be applied for clearances and creepage distances and for rigid insulation. The surge voltages to be expected, characteristics of surge protective devices, and pollution at the intended site must be considered when dimensioning clearances. Clearances are then dimensioned according to the external or internal surge voltages to be expected. Different surge voltages, grouped into categories, i.e., a value that specifies a rated impulse voltage, determine the required clearance directly. These surge voltage categories (I to IV) are mainly based on a statistical study, and are used for equipment that is directly supplied by low-voltage networks. Definitions of the individual categories are provided below as an extract of DIN EN 60664/VDE 0110-1.

The clearances can be calculated according to Table 2 (minimum clearances) depending on the homogeneity level of the field between the electrodes (case A – non-homogeneous field, case B – homogeneous field).

Clearances according to case A are capable of withstanding the assigned impulse voltages under all conditions. Equipment that is dimensioned according to case A can therefore be used without any further testing. Clearance values according to case B are based on ideal conditions. Clearance values which fall between case A and case B must be proven by means of an impulse voltage test.

The voltages present, the properties of insulation materials, the pollution to be

expected, and safety measures against pollution are considered when dimensioning creepage distances.

The effect of pollution is considered when determining the clearances and creepage distances according to three intensity levels (pollution degree 1 to 3).

The creepage distance is based on the rated voltage that is derived from the working voltage or nominal mains voltage. The minimum creepage distances are assigned to the rated voltages according to the pollution degree in Table 4.

If the respective product descriptions do not contain any additional specifications, the products presented in this catalog are dimensioned for surge voltage category III and pollution degree 3 according to this regulation (DIN EN 60664-1/VDE 0110-1).

Surge voltage categories I to IV

– Equipment in **surge voltage category IV** can be used at the terminal point of the installation.

Note: examples of such equipment include electricity meters and primary devices for overcurrent protection.

– Equipment in **surge voltage category III** can be used in fixed installations and is intended for such cases where there are special requirements for the reliability and availability of the equipment.

Note: examples of such equipment include switches in fixed installations and equipment for industrial use with permanent connection to the fixed installation.

– Equipment in **surge voltage category II** is power-consuming equipment that is supplied by the fixed installation.

Note: examples of such equipment include household appliances, portable tools, other domestic appliances, and similar devices.

– Equipment in **surge voltage category I** can be connected to circuits where measures have been taken to limit the surge voltages to a suitable lower value.

Only non-conductive pollution occurs. However, temporary conductivity due to condensation must occasionally be taken into consideration.

– Pollution degree 3

Conductive pollution occurs or dry, non-conductive pollution which becomes conductive, since condensation is to be expected.

– Pollution degree 4

Permanent conductivity occurs, caused by conductive dust, rain or moisture.

Insulation material

DIN EN 60664/VDE 0110-1 classifies insulation materials into four groups depending on their CTI values that were obtained using solution A as per IEC 60112. These are:

Insulation material group I: $600 \leq \text{CTI}$

Insulation material group II: $400 \leq \text{CTI} \leq 600$

Insulation material group IIIa:

$175 \leq \text{CTI} < 400$

Insulation material group IIIb:

$100 \leq \text{CTI} < 175$

The comparative tracking index of the creepage distance formation must have been determined based on suitable samples using test solution A as specified in DIN IEC 60112.

The proof tracking index of the creepage distance formation (PTI) is used as proof of the creepage current properties of insulation materials.

Pollution degrees 1 to 4

The following four pollution degrees have been defined for the micro-environment in order to determine clearances and creepage distances:

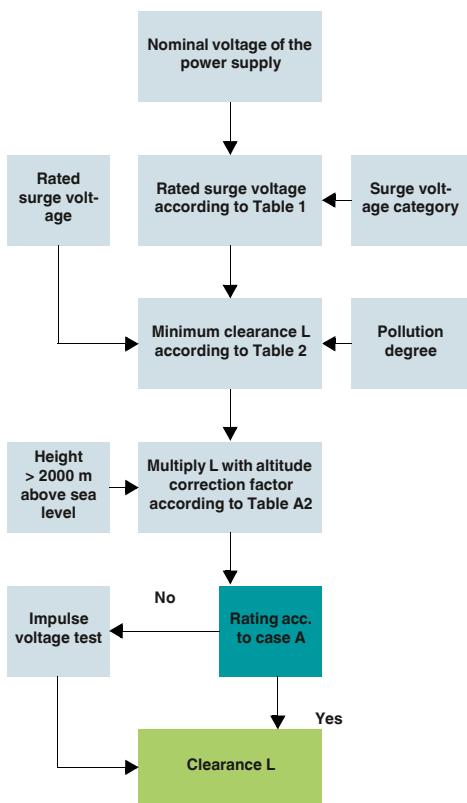

– Pollution degree 1

No pollution or only dry, non-conductive pollution occurs. The pollution has no effect.

– Pollution degree 2

Dimensioning of clearances

Schematic for determining clearances

Rated surge voltages for equipment that is directly supplied by the low-voltage network (extract from Table 1)

Nominal voltage of the power supply system ¹) (mains) acc. to IEC 60038 ³)	Conductor-neutral conductor voltage derived from the total nominal AC voltage or nominal DC voltage			Rated surge voltage ²) [V]				
	Three-phase [V]	Single-phase [V]	[V]	Surge voltage category ⁴)	I	II	III	IV
			50	330	500	800	1500	1500
			100	500	800	1500	2500	2500
			150	800	1500	2500	4000	4000
230/400 277/480	120 to 240		300	1500	2500	4000	6000	6000
400/690			600	2500	4000	6000	8000	8000
			1000	4000	6000	8000	12000	12000

¹) Refer to Appendix B for application in existing deviating low-voltage networks and their nominal voltages.

²) Equipment with this rated surge voltage may be used in systems according to IEC 60364-4-443.

³) The slash, i.e., /, indicates a three-phase four-conductor system. The lower value is the conductor-to-neutral conductor voltage, whereas the higher value is the conductor-to-conductor voltage. When only one value is specified, it refers to a three-phase three-conductor system, and indicates the conductor-to-conductor voltage.

⁴) Refer to 2.2.2.1.1 for an explanation of surge voltage categories.

Minimum clearances for surge voltages (extract from Table 2)

¹) This voltage is:

- For function insulation: the highest surge voltage expected for the clearance
- For basic insulation, if influenced directly or considerably by surge voltages from the low-voltage network
- For the rated surge voltage of the equipment
- For a different basic insulation: the highest impulse voltage possible in the circuit

²) Preferred values

³) For PCBs, the values of pollution degree 1 are applicable, except that no deviation below the value of 0.04 mm is permitted, as specified in Table 4.

⁴) Minimum clearances for pollution degrees 2 and 3 are based on the corresponding creepage distances. This resistance is reduced due to the effects of humidity.

⁵) Values can be interpolated for parts or circuits within equipment that are subjected to impulse voltages.

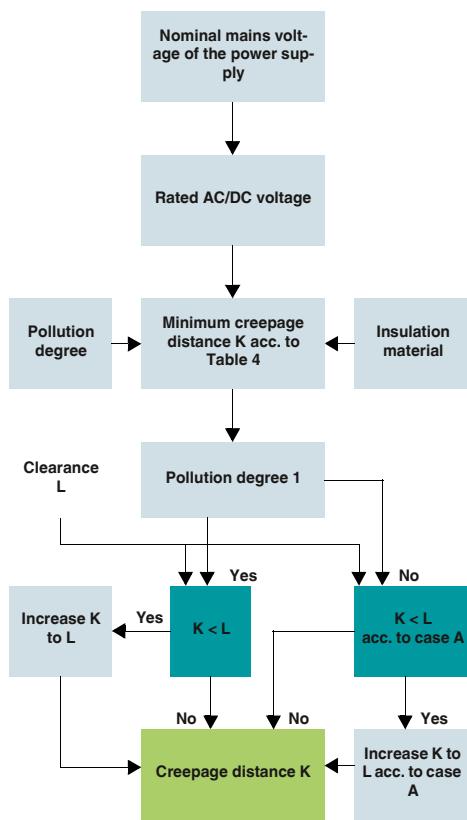

⁶) The distances for pollution degree 4 are equal to those for pollution degree 3, except that the minimum clearance is 1.6 mm.

Altitude correction factors (extract from Table A.2)

Height in m	Normal air pressure in kPa	Multiplication factor for gaps

¹⁾ Conductor-ground insulation levels for non-grounded systems or those grounded through impedance correspond to conductor-conductor insulation levels as the operating voltage of every conductor to ground can, in practice, reach the conductor-conductor voltage. This is due to the fact that the actual voltage to ground is determined by the insulation resistance and the capacitive reactance of each conductor to ground. A low (but permissible) insulation resistance of one conductor can thereby practically ground it and increase the other two to conductor-conductor voltage to ground.

²⁾ For equipment designed for use in three-phase four-conductor and three-phase three-conductor systems, grounded as well as non-grounded, only the values for three-conductor systems may be used.

^{*)} Refer to 2.2.1 for correlation with the rated voltage.

^{**)} These values correspond to the values in Table 1.

^{**)} These values correspond to the values in Table 1.

Creepage distances to prevent failures occurring due to creepage (extract from Table 4)

Voltage ¹⁾ r.m.s. value	Minimum creepage distances									1) This voltage is: a) For function insulation: the working voltage b) For basic and additional insulation of a circuit supplied directly by the low-voltage network: either the voltage selected from Table 3a or 3b on the basis of the rated voltage of the equipment or the rated insulation voltage; c) For basic and additional insulation of systems, equipment, and internal circuits which are not supplied directly from the mains: the highest r.m.s. value of the voltage that, within the bounds of the rated data, can occur in the system, the equipment or the internal circuit, when supplied with rated voltage and in the case of the most unfavorable combination of operating conditions.

¹⁾ This voltage is:
a) For function insulation: the working voltage
b) For basic and additional insulation of a circuit supplied directly by the low-voltage network: either the voltage selected from Table 3a or 3b on the basis of the rated voltage of the equipment or the rated insulation voltage;
c) For basic and additional insulation of systems, equipment, and internal circuits which are not supplied directly from the mains: the highest r.m.s. value of the voltage that, within the bounds of the rated data, can occur in the system, the equipment or the internal circuit, when supplied with rated voltage and in the case of the most unfavorable combination of operating conditions.

²⁾ With pollution degree 3, insulation material group IIIb is not recommended for use if voltages are greater than 630 V.
