## REFERENCE DATA

## (1) AQ-J Solid State Relays

## 1. Load current vs. ambient temperature

Tested condition:

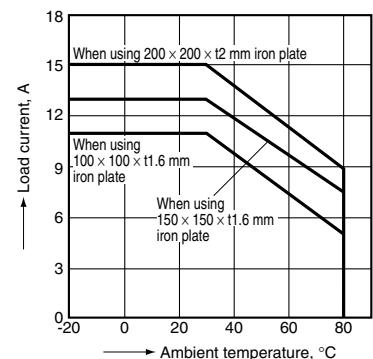

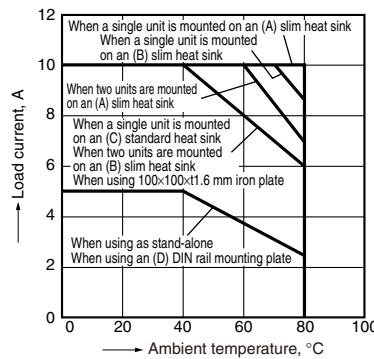

- 1) If attached to a heat sink, use a heat conductive compound (Ex. Momentive Performance Materials Inc. YG6111 or TSK5303) of similar coating to improve cooling
- 2) Without external heat sink  
If the mounting surface is not metallic and a heat sink is not used, expose the bottom surface and plate surface to improve heat dissipation.
- 3) The current value is per 1a.
