

## FEATURES

- Single Supply Operation
  - Input Voltage Range Extends to Ground
  - Output Swings to Ground While Sinking Current
- Pin Compatible to 1458 and 324 with Precision Specs
- **Guaranteed Offset Voltage:** 150 $\mu$ V Max
- **Guaranteed Low Drift:** 2 $\mu$ V/ $^{\circ}$ C Max
- **Guaranteed Offset Current:** 0.8nA Max
- **Guaranteed High Gain**
  - 5mA Load Current: 1.5 Million Min
  - 17mA Load Current: 0.8 Million Min
- **Guaranteed Low Supply Current:** 500 $\mu$ A Max
- Low Voltage Noise, 0.1Hz to 10Hz: 0.55 $\mu$ V<sub>P-P</sub>
- Low Current Noise—Better than OP-07, 0.07pA/ $\sqrt{Hz}$

## APPLICATIONS

- Battery-Powered Precision Instrumentation
  - Strain Gauge Signal Conditioners
  - Thermocouple Amplifiers
  - Instrumentation Amplifiers
- 4mA to 20mA Current Loop Transmitters
- Multiple Limit Threshold Detection
- Active Filters
- Multiple Gain Blocks

## Quad Precision Op Amp (LT1014) Dual Precision Op Amp (LT1013)

### DESCRIPTION

The **LT<sup>®</sup>1014** is the first precision quad operational amplifier which directly upgrades designs in the industry standard 14-pin DIP LM324/LM348/OP-11/4156 pin configuration. It is no longer necessary to compromise specifications, while saving board space and cost, as compared to single operational amplifiers.

The LT1014's low offset voltage of 50 $\mu$ V, drift of 0.3 $\mu$ V/ $^{\circ}$ C, offset current of 0.15nA, gain of 8 million, common mode rejection of 117dB and power supply rejection of 120dB qualify it as four truly precision operational amplifiers. Particularly important is the low offset voltage, since no offset null terminals are provided in the quad configuration. Although supply current is only 350 $\mu$ A per amplifier, a new output stage design sources and sinks in excess of 20mA of load current, while retaining high voltage gain.

Similarly, the **LT1013** is the first precision dual op amp in the 8-pin industry standard configuration, upgrading the performance of such popular devices as the MC1458/MC1558, LM158 and OP-221. The LT1013's specifications are similar to (even somewhat better than) the LT1014's.

Both the LT1013 and LT1014 can be operated off a single 5V power supply: input common mode range includes ground; the output can also swing to within a few millivolts of ground. Crossover distortion, so apparent on previous single-supply designs, is eliminated. A full set of specifications is provided with  $\pm$ 15V and single 5V supplies.

## TYPICAL APPLICATION

3-Channel Thermocouple Thermometer

LT1014 Distribution of Offset Voltage

1013/14 TA02

# LT1013/LT1014

## ABSOLUTE MAXIMUM RATINGS (Note 1)

Supply Voltage	$\pm 22V$	Lead Temperature (Soldering, 10 sec.)	300°C
Differential Input Voltage	$\pm 30V$	Operating Temperature Range

**Note 1:** Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. Exposure to any Absolute Rating condition for extended periods may affect device reliability and lifetime.

**Note 2:** This parameter is guaranteed by design and is not tested. Typical parameters are defined as the 60% yield of parameter distributions of individual amplifiers; i.e., out of 100 LT1014s (or 100 LT1013s) typically 240 op amps (or 120 ) will be better than the indicated specification.

**Note 3:** This parameter is not 100% tested.

## APPLICATIONS INFORMATION

### Single Supply Operation

The LT1013/LT1014 are fully specified for single supply operation, i.e., when the negative supply is 0V. Input common mode range includes ground; the output swings within a few millivolts of ground. Single supply operation, however, can create special difficulties, both at the input and at the output. The LT1013/LT1014 have specific circuitry which addresses these problems.

At the input, the driving signal can fall below 0V— inadvertently or on a transient basis. If the input is more than a few hundred millivolts below ground, two distinct problems

can occur on previous single supply designs, such as the LM124, LM158, OP-20, OP-21, OP-220, OP-221, OP-420:

- a) When the input is more than a diode drop below ground, unlimited current will flow from the substrate ( $V^-$  terminal) to the input. This can destroy the unit. On the LT1013/LT1014, the  $400\Omega$  resistors, in series with the input (see Schematic Diagram), protect the devices even when the input is 5V below ground.

## APPLICATIONS INFORMATION

b) When the input is more than 400mV below ground (at 25°C), the input stage saturates (transistors Q3 and Q4) and phase reversal occurs at the output. This can cause lock-up in servo systems. Due to a unique phase reversal protection circuitry (Q21, Q22, Q27, Q28), the LT1013/LT1014's outputs do not reverse, as illustrated below, even when the inputs are at -1.5V.

There is one circumstance, however, under which the phase reversal protection circuitry does not function: when the other op amp on the LT1013, or one specific amplifier of the other three on the LT1014, is driven hard into negative saturation at the output.

Phase reversal protection does not work on amplifier:

A when D's output is in negative saturation. B's and C's outputs have no effect.

B when C's output is in negative saturation. A's and D's outputs have no effect.

C when B's output is in negative saturation. A's and D's outputs have no effect.

D when A's output is negative saturation. B's and C's outputs have no effect.

At the output, the aforementioned single supply designs either cannot swing to within 600mV of ground (OP-20) or cannot sink more than a few microamperes while swinging to ground (LM124, LM158). The LT1013/LT1014's all-NPN output stage maintains its low output resistance and high gain characteristics until the output is saturated.

In dual supply operations, the output stage is crossover distortion-free.

### Comparator Applications

The single supply operation of the LT1013/LT1014 lends itself to its use as a precision comparator with TTL compatible output:

In systems using both op amps and comparators, the LT1013/LT1014 can perform multiple duties; for example, on the LT1014, two of the devices can be used as op amps and the other two as comparators.

**Voltage Follower with Input Exceeding the Negative Common Mode Range**

**Comparator Rise Response Time  
10mV, 5mV, 2mV Overdrives**

**Comparator Fall Response Time  
to 10mV, 5mV, 2mV Overdrives**

10134fe

## APPLICATIONS INFORMATION

### Low Supply Operation

The minimum supply voltage for proper operation of the LT1013/LT1014 is 3.4V (three Ni-Cad batteries). Typical supply current at this voltage is 290 $\mu$ A, therefore power dissipation is only one milliwatt per amplifier.

### Noise Testing

For applications information on noise testing and calculations, please see the LT1007 or LT1008 data sheet.

### Test Circuit for Offset Voltage and Offset Drift with Temperature

\*RESISTOR MUST HAVE LOW THERMOELECTRIC POTENTIAL.

\*\*THIS CIRCUIT IS ALSO USED AS THE BURN-IN CONFIGURATION, WITH SUPPLY VOLTAGES INCREASED TO  $\pm 20$ V.

$V_0 = 1000V_{OS}$

LT1013/14 TA06

## TYPICAL APPLICATIONS

### 50MHz Thermal RMS-to-DC Converter

2% ACCURACY, DC-50MHz.  
100:1 CREST FACTOR CAPABILITY.

\* 0.1% RESISTOR.

T1-T2 = YELLOW SPRINGS INST. CO. THERMISTOR COMPOSITE #44018.  
ENCLOSE T1 AND T2 IN STYROFOAM.

7.5mW DISSIPATION.

### 5V Single Supply Dual Instrumentation Amplifier

1013/14 TA04

# LT1013/LT1014

## TYPICAL APPLICATIONS

### Hot-Wire Anemometer

1013/14 TA05

### Liquid Flowmeter

\* 1% FILM RESISTOR.

\*\* SUPPLIED WITH YSI THERMISTOR NETWORK.  
T1, T2 YSI THERMISTOR NETWORK = #44201.  
FLOW IN PIPE IS INVERSELY PROPORTIONAL TO  
RESISTANCE OF T1-T2 TEMPERATURE DIFFERENCE.  
A1-A2 PROVIDE GAIN. A3-A4 PROVIDE LINEARIZED  
FREQUENCY OUTPUT.

1013/14 TA06

10134fe

## TYPICAL APPLICATIONS

## 5V Powered Precision Instrumentation Amplifier

## 9V Battery Powered Strain Gauge Signal Conditioner

LT1013/LT1014

## **TYPICAL APPLICATIONS**

## **5V Powered Motor Speed Controller No Tachometer Required**

1013/14 TAO

## 5V Powered EEPROM Pulse Generator

MEETS ALL V<sub>PP</sub> PROGRAMMING SPECS WITH NO TRIMS AND  
RUNS OFF 5V SUPPLY—NO EXTERNAL HIGH VOLTAGE SUPPLY REQUIRED.  
SUITABLE FOR BATTERY POWERED USE (600µA QUIESCENT CURRENT).

\*1% METAL FILM.

1013/14 TA10

## TYPICAL APPLICATIONS

Methane Concentration Detector with Linearized Output

Low Power 9V to 5V Converter

# LT1013/LT1014

## TYPICAL APPLICATIONS

5V Powered 4mA to 20mA Current Loop Transmitter<sup>†</sup>

Fully Floating Modification to 4mA-20mA Current Loop<sup>†</sup>

10134fe

## TYPICAL APPLICATIONS

## 5V Powered, Linearized Platinum RTD Signal Conditioner

ALL RESISTORS ARE TRW-MAR-6 METAL FILM.

RATIO MATCH 2M–200K  $\pm$  0.01%.

TRIM SEQUENCE:

SET SENSOR TO 0° VALUE.

ADJUST ZERO FOR 0V OUT.

SET SENSOR TO 100°C VALUE.

ADJUST GAIN FOR 1.000V OUT.

SET SENSOR TO 400°C.

ADJUST LINEARITY FOR 4.000V OUT, REPEAT AS REQUIRED.

1013/14 TA15

## Strain Gauge Bridge Signal Conditioner

\* 1% FILM RESISTOR.  
PRESSURE TRANSDUCER-BLH/DHF-350.  
CIRCLED LETTER IS PIN NUMBER.

1013/14 TA16  
10134fe

# LT1013/LT1014

## TYPICAL APPLICATIONS

**LVDT Signal Conditioner**

**Triple Op Amp Instrumentation Amplifier with Bias Current Cancellation**

## TYPICAL APPLICATIONS

## Low Dropout Regulator for 6V Battery

## Voltage Controlled Current Source with Ground Referred Input and Output

# LT1013/LT1014

## TYPICAL APPLICATIONS

### 6V to $\pm 15$ V Regulating Converter

### Low Power, 5V Driven, Temperature Compensated Crystal Oscillator (TXCO)<sup>†</sup>

## PACKAGE DESCRIPTION

Please refer to <http://www.linear.com/product/LT1013#packaging> for the most recent package drawings.

**H Package**  
**8-Lead TO-5 Metal Can (.200 Inch PCD)**  
(Reference LTC DWG # 05-08-1320)

**J8 Package**  
**8-Lead CERDIP (Narrow .300 Inch, Hermetic)**  
(Reference LTC DWG # 05-08-1110)

**J Package**  
**14-Lead CERDIP (Narrow .300 Inch, Hermetic)**  
(Reference LTC DWG # 05-08-1110)

## OBSOLETE PACKAGES

## PACKAGE DESCRIPTION

Please refer to <http://www.linear.com/product/LT1013#packaging> for the most recent package drawings.

**N8 Package**  
**8-Lead PDIP (Narrow .300 Inch)**  
(Reference LTC DWG # 05-08-1510 Rev I)

NOTE:

1. DIMENSIONS ARE INCHES

MILLIMETERS

\*THESE DIMENSIONS DO NOT INCLUDE MOLD FLASH OR PROTRUSIONS.  
MOLD FLASH OR PROTRUSIONS SHALL NOT EXCEED .010 INCH (0.254mm)

**N Package**  
**14-Lead PDIP (Narrow .300 Inch)**  
(Reference LTC DWG # 05-08-1510)

NOTE:

1. DIMENSIONS ARE INCHES

MILLIMETERS

\*THESE DIMENSIONS DO NOT INCLUDE MOLD FLASH OR PROTRUSIONS.  
MOLD FLASH OR PROTRUSIONS SHALL NOT EXCEED .010 INCH (0.254mm)

## PACKAGE DESCRIPTION

Please refer to <http://www.linear.com/product/LT1013#packaging> for the most recent package drawings.

**S8 Package**  
**8-Lead Plastic Small Outline (Narrow .150 Inch)**  
 (Reference LTC DWG # 05-08-1610 Rev G)

**SW Package**  
**XX-Lead Plastic Small Outline (Wide .300 Inch)**  
 (Reference LTC DWG # 05-08-1620)

**REVISION HISTORY** (Revision history begins at Rev D)
