Production of the products shown in   is scheduled to be discontinued.

## LXV Series

- Low impedance
- Endurance with ripple current : 2,000 to 5,000 hours at 105°C
- Solvent resistant type (see PRECAUTIONS AND GUIDELINES)
- RoHS2 Compliant
- AEC-Q200 compliant : Please contact Chemi-Con for more details, test data, information.

### SPECIFICATIONS

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current.

For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# KXQ Series

KXJ

Downsized

KXQ

- Ideal for on-board charger
- Downsized from KXJ series
- Rated voltage range : 400 to 450V<sub>dc</sub>, Capacitance range : 47 to 180µF
- Endurance with ripple current : 10,000 to 12,000 hours at 105°C
- Non solvent resistant type
- RoHS2 Compliant
- AEC-Q200 compliant : Please contact Chemi-Con for more details, test data, information.

## ◆RATED RIPPLE CURRENT MULTIPLIERS

## ●Frequency Multipliers

| Capacitance(μF) | Frequency(Hz) | 120  | 1k   | 10k  | 100k |
|-----------------|---------------|------|------|------|------|
| 47 to 91        |               | 1.00 | 1.50 | 1.90 | 2.00 |
| 100 to 180      |               | 1.00 | 1.40 | 1.65 | 1.70 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# KXN Series

KXL

Downsized →

KXN

- Ideal for low profile power supply applications
- Downsized from KXL series
- Rated voltage range : 350 to 450V<sub>dc</sub>, Capacitance range : 15 to 330μF
- Endurance with ripple current : 10,000 to 12,000 hours at 105°C
- Non solvent resistant type
- RoHS2 Compliant

## SPECIFICATIONS

## ◆RATED RIPPLE CURRENT MULTIPLIERS

## ●Frequency Multipliers

| Capacitance(μF) | Frequency(Hz) | 120  | 1k   | 10k  | 100k |
|-----------------|---------------|------|------|------|------|
| 15 to 82        |               | 1.00 | 1.75 | 2.25 | 2.50 |
| 100 to 330      |               | 1.00 | 1.67 | 2.05 | 2.25 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# KXL Series

- Ideal for low profile power supply applications
- Downsized from KXJ series
- Rated voltage range : 400 to 450V<sub>dc</sub>, Capacitance range : 15 to 150μF
- Endurance with ripple current : 10,000 to 12,000 hours at 105°C
- Non solvent resistant type
- RoHS2 Compliant

## SPECIFICATIONS

## ◆RATED RIPPLE CURRENT MULTIPLIERS

## ●Frequency Multipliers

| Capacitance(μF) | Frequency(Hz) | 120  | 1k   | 10k  | 100k |
|-----------------|---------------|------|------|------|------|
| 15 to 82        |               | 1.00 | 1.75 | 2.25 | 2.50 |
| 100 to 150      |               | 1.00 | 1.67 | 2.05 | 2.25 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# KXJ Series

- Downsized and Longer life from current KXG series
- Endurance with ripple current : 8,000 to 12,000 hours at 105°C
- Rated voltage range : 160 to 500V, Capacitance range : 6.8 to 680μF
- For electronic ballast circuits and other long life applications
- Non solvent resistant type
- RoHS2 Compliant
- AEC-Q200 compliant : Please contact Chemi-Con for more details, test data, information.

## SPECIFICATIONS

### ◆RATED RIPPLE CURRENT MULTIPLIERS

#### ●Frequency Multipliers

(160 to 450V<sub>dc</sub>)

| Capacitance(μF) | Frequency(Hz) | 120  | 1k   | 10k  | 100k |
|-----------------|---------------|------|------|------|------|
| 6.8 to 82       |               | 1.00 | 1.75 | 2.25 | 2.50 |
| 100 to 680      |               | 1.00 | 1.67 | 2.05 | 2.25 |

(500V<sub>dc</sub>)

| Capacitance(μF) | Frequency(Hz) | 120  | 1k   | 10k  | 100k |
|-----------------|---------------|------|------|------|------|
| 6.8 to 22       |               | 1.00 | 1.78 | 2.30 | 2.59 |
| 27 to 39        |               | 1.00 | 1.75 | 2.25 | 2.50 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# KWB Series

- Ideal for low profile power supply applications
- Downsized form KWA series
- Rated voltage range : 400 to 450V<sub>dc</sub>, Capacitance range : 18 to 270μF
- Endurance with ripple current : 5,000 hours at 105°C
- Non solvent resistant type
- RoHS2 Compliant

## ◆RATED RIPPLE CURRENT MULTIPLIERS

## ● Frequency Multipliers

| Capacitance(μF) | Frequency(Hz) | 120  | 1k   | 10k  | 100k |
|-----------------|---------------|------|------|------|------|
| 18 to 82        |               | 1.00 | 1.50 | 1.75 | 1.80 |
| 100 to 270      |               | 1.00 | 1.30 | 1.40 | 1.50 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# KWA Series

- Ideal for low profile power supply applications
- Longer life form KHE series
- Rated voltage range : 400 to 450V<sub>dc</sub>, Capacitance range : 27 to 120μF
- Endurance with ripple current : 5,000 hours at 105°C
- Non solvent resistant type
- RoHS2 Compliant

## ◆RATED RIPPLE CURRENT MULTIPLIERS

## ●Frequency Multipliers

| Capacitance(μF) | Frequency(Hz) | 120  | 1k   | 10k  | 100k |
|-----------------|---------------|------|------|------|------|
| 27 to 82        | 120           | 1.00 | 1.50 | 1.75 | 1.80 |
|                 | 100           | 1.00 | 1.30 | 1.40 | 1.50 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# KHF Series

- Ideal for low profile power supply applications
- Downsize, high ripple design
- Rated voltage range : 400 to 450V<sub>dc</sub>, Capacitance range : 18 to 270μF
- Endurance with ripple current : 3,000 hours at 105°C
- Non solvent resistant type
- RoHS2 Compliant

KHF

## ◆ RATED RIPPLE CURRENT MULTIPLIERS

## ● Frequency Multipliers

| Capacitance(μF) | Frequency(Hz) | 120  | 1k   | 10k  | 100k |
|-----------------|---------------|------|------|------|------|
| 18 to 82        |               | 1.00 | 1.50 | 1.75 | 1.80 |
| 100 to 270      |               | 1.00 | 1.30 | 1.40 | 1.50 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

Product specifications in this catalog are subject to change without notice. Request our product specifications before purchase and/or use. Please use our products based on the information contained in this catalog and product specifications.

# KHE Series

- Ideal for low profile power supply applications
- Downsize, high ripple design
- Rated voltage range : 400 to 450V<sub>dc</sub>, Capacitance range : 27 to 120μF
- Endurance with ripple current : 2,000 hours at 105°C
- Non solvent resistant type
- RoHS2 Compliant

## SPECIFICATIONS

## ◆ RATED RIPPLE CURRENT MULTIPLIERS

## ● Frequency Multipliers

| Capacitance(μF) \ Frequency(Hz) | 120  | 1k   | 10k  | 100k |
|---------------------------------|------|------|------|------|
| 27 to 82                        | 1.00 | 1.50 | 1.75 | 1.80 |
| 100 to 120                      | 1.00 | 1.30 | 1.40 | 1.50 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# PAG Series

- Downsize, high ripple design (φ 10 to 18)
- Rated voltage range : 200 to 450V<sub>dc</sub>, Capacitance range : 18 to 560μF
- Endurance with ripple current : 2,000 hours at 105°C
- Ideal for low profile power supply applications
- Non solvent resistant type
- RoHS2 Compliant

## SPECIFICATIONS

## ◆RATED RIPPLE CURRENT MULTIPLIERS

## ●Frequency Multipliers

| Capacitance(μF) \ Frequency(Hz) | 120  | 1k   | 10k  | 100k |
|---------------------------------|------|------|------|------|
| 18 to 82                        | 1.00 | 1.50 | 1.75 | 1.80 |
| 100 to 560                      | 1.00 | 1.30 | 1.40 | 1.50 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

## KLJ Series

- Doesn't spark with DC over voltage
- Endurance with ripple current : 2,000 hours at 105°C
- Non solvent resistant type
- ESR value prescribed
- RoHS2 Compliant

Doesn't spark with DC over voltage!

| Capacitance(μF) | Frequency(Hz) | 120  | 300  | 1k   | 10k  | 50k  | 100k |
|-----------------|---------------|------|------|------|------|------|------|
| 10μF            |               | 1.00 | 1.35 | 1.75 | 2.30 | 2.50 | 2.70 |
| 15 to 47μF      |               | 1.00 | 1.25 | 1.50 | 1.75 | 1.80 | 1.85 |
| 56 to 330μF     |               | 1.00 | 1.15 | 1.30 | 1.40 | 1.50 | 1.60 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

## ◆DC OVERVOLTAGE TEST CONDITIONS

The vent will operate and the capacitor shall become an open circuit without burning materials when the following excess DC voltage is applied.

## ●Test DC voltage

| Rated voltage      | Nominal capacitance | Current limit | Test DC voltage        |
|--------------------|---------------------|---------------|------------------------|
| 200V <sub>dc</sub> | <330μF              | 4A            | 300/375V <sub>dc</sub> |
|                    | 330μF               | 5A            |                        |
| 400V <sub>dc</sub> | <100μF              | 2A            | 500/600V <sub>dc</sub> |
|                    | 100μF ≤ C ≤ 120μF   | 4A            |                        |
| 450V <sub>dc</sub> | <100μF              | 2A            | 550/675V <sub>dc</sub> |
|                    | 100μF ≤ C ≤ 120μF   | 4A            |                        |

## ●Test circuit

Constant DC voltage/current power supply

# KXF Series

- For LED light circuits and other long life applications
- Rated voltage range : 160 to 450 V<sub>dc</sub> , Capacitance range : 5.6 to 68μF
- Endurance with ripple current : 15,000 to 20,000 hours at 105°C
- Non solvent resistant type
- RoHS2 Compliant

## SPECIFICATIONS

## RATED RIPPLE CURRENT MULTIPLIERS

- Frequency Multipliers

| Capacitance(μF) | Frequency(Hz) | 120  | 1k   | 10k  | 100k |
|-----------------|---------------|------|------|------|------|
| 5.6 ~ 68        |               | 1.00 | 1.75 | 2.25 | 2.50 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

**KXF** Series

# LE Series

- Suitable for long life products
- Downsize and long life
- Endurance with ripple current : 10,000 hours at 105°C
- Case size range :  $\phi 5 \times 11L$  to  $\phi 8 \times 11.5L$
- Solvent resistant type (see PRECAUTIONS AND GUIDELINES)
- RoHS2 Compliant

## SPECIFICATION

| Items                                                  | Characteristics                                                                                                                                                                                                                                                                                                                                                                                                                                                              |      |      |      |      |      |      |      |

## ◆RATED RIPPLE CURRENT MULTIPLIERS

## ●Frequency Multipliers

| Capacitance( $\mu$ F) | Frequency(Hz) |      |      |      |
|-----------------------|---------------|------|------|------|
|                       | 120           | 1k   | 10k  | 100k |
| 1.0 to 10             | 0.42          | 0.60 | 0.80 | 1.00 |
| 22 to 33              | 0.55          | 0.75 | 0.90 | 1.00 |
| 47 to 330             | 0.70          | 0.85 | 0.95 | 1.00 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# GPA Series

- Guaranteed short time at 150°C
- Downsized, low impedance and high-ripple current version of GXE series
- Specified ESR after endurance test
- For high ripple current automotive applications.  
(Direct fuel injection and electric power steering etc.)
- Endurance with ripple current : 3,000 to 5,000 hours at 125°C
- Solvent resistant type (see PRECAUTIONS AND GUIDELINES)
- RoHS2 Compliant
- AEC-Q200 compliant : Please contact Chemi-Con for more details, test data, information.

## SPECIFICATIONS

### ◆RATED RIPPLE CURRENT MULTIPLIERS

#### ●Frequency Multipliers

| Capacitance(μF) | Frequency(Hz) | 120  | 1k   | 10k  | 100k |
|-----------------|---------------|------|------|------|------|
| 200             |               | 0.40 | 0.82 | 0.93 | 1.00 |
| 270 to 560      |               | 0.50 | 0.85 | 0.94 | 1.00 |
| 620 to 1,800    |               | 0.60 | 0.87 | 0.95 | 1.00 |
| 2,200 to 3,900  |               | 0.75 | 0.90 | 0.95 | 1.00 |
| 4,700 to 6,800  |               | 0.85 | 0.95 | 0.98 | 1.00 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

Please contact us for lifetime estimation.

## GVA Series

- Structure of higher vibration by GPA series (acceleration 392m/s<sup>2</sup>, 40G)
- Guaranteed short time at 150°C
- Designed for electric power steering and ECU(include engine control, direct fuel injection) etc.
- Rated voltage range : 25 to 100V, Capacitance range : 430 to 5,100μF
- Solvent resistant type
- RoHS2 Compliant
- AEC-Q200 compliant : Please contact Chemi-Con for more details, test data, information.

GPA → Vibration resistance → **GVA**

### ◆RATED RIPPLE CURRENT MULTIPLIERS

#### ●Frequency Multipliers

| Capacitance(μF) | Frequency(Hz) | 120  | 1k   | 10k  | 100k |
|-----------------|---------------|------|------|------|------|
| 430 to 560      |               | 0.50 | 0.85 | 0.94 | 1.00 |
| 750 to 2,000    |               | 0.60 | 0.87 | 0.95 | 1.00 |
| 2,700 to 3,900  |               | 0.75 | 0.90 | 0.95 | 1.00 |
| 5,100           |               | 0.85 | 0.95 | 0.98 | 1.00 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

Please contact us for lifetime estimation.

## GXM Series New!

- Suitable for high-temperature applications such as power supplies at communication base stations.
- Rated voltage range : 400 to 450V<sub>dc</sub>, Capacitance range : 39 to 180μF
- Endurance with ripple current : 5,000 hours at 125°C
- Non solvent resistant type
- RoHS2 Compliant

## ◆RATED RIPPLE CURRENT MULTIPLIERS

### ●Frequency Multipliers

| Capacitance(μF) \ Frequency(Hz) | 120  | 1k   | 10k  | 100k |
|---------------------------------|------|------|------|------|
| 39 to 82                        | 1.00 | 1.60 | 2.20 | 2.50 |
| 100 to 180                      | 1.00 | 1.50 | 2.00 | 2.25 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# GXF Series

- Downsizing and high-ripple current version of GXE series
- For automobile modules and networking equipment and other high temperature applications
- Endurance with ripple current : 3,000 hours at 125°C
- Solvent resistant type except 160 to 400V<sub>dc</sub>
- RoHS2 Compliant
- AEC-Q200 compliant : Please contact Chemi-Con for more details, test data, information.

## SPECIFICATIONS

## ◆RATED RIPPLE CURRENT MULTIPLIERS

## ●Frequency Multipliers

(25 to 100V<sub>dc</sub>)

| Capacitance(μF) | Frequency(Hz) | 120  | 1k   | 10k  | 100k |
|-----------------|---------------|------|------|------|------|
| 130 to 240      |               | 0.40 | 0.82 | 0.93 | 1.00 |
| 270 to 560      |               | 0.50 | 0.85 | 0.94 | 1.00 |
| 620 to 2,000    |               | 0.60 | 0.87 | 0.95 | 1.00 |
| 2,200 to 4,300  |               | 0.75 | 0.90 | 0.95 | 1.00 |
| 4,700 to 11,000 |               | 0.85 | 0.95 | 0.98 | 1.00 |

Please contact us for lifetime estimation.

(160 to 400V<sub>dc</sub>)

| Capacitance(μF) | Frequency(Hz) | 50   | 120  | 300  | 1k   | 10k  | 100k |
|-----------------|---------------|------|------|------|------|------|------|
| 12 to 33        |               | 0.15 | 0.30 | 0.45 | 0.65 | 0.95 | 1.00 |
| 36 to 270       |               | 0.25 | 0.35 | 0.50 | 0.70 | 0.96 | 1.00 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# GXL Series

- Long-Life version of GXE series
- For automobile modules and other high temperature applications
- Endurance with ripple current : 5,000 hours at 125°C
- Solvent resistant type (see PRECAUTIONS AND GUIDELINES)
- RoHS2 Compliant
- AEC-Q200 compliant : Please contact Chemi-Con for more details, test data, information.

## SPECIFICATIONS

## ◆RATED RIPPLE CURRENT MULTIPLIERS

## ●Frequency Multipliers

| Capacitance(μF) | Frequency(Hz) |      |      |      |
|-----------------|---------------|------|------|------|
|                 | 120           | 1k   | 10k  | 100k |
| 100             | 0.40          | 0.75 | 0.90 | 1.00 |
| 220 to 470      | 0.50          | 0.85 | 0.94 | 1.00 |
| 1,000           | 0.60          | 0.87 | 0.95 | 1.00 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# GPD Series

- Guaranteed short time at 150°C
- Downsized and high-ripple current version of GPA series
- For automobile modules and other high temperature applications
- Endurance with ripple current : 2,000 to 3,000 hours at 125°C to 135°C
- Solvent resistant type (see PRECAUTIONS AND GUIDELINES)
- RoHS2 Compliant
- AEC-Q200 compliant : Please contact Chemi-Con for more details, test data, information.

## ◆RATED RIPPLE CURRENT MULTIPLIERS

## ●Frequency Multipliers

| Capacitance(μF) \ Frequency(Hz) | 120  | 1k   | 10k  | 100k |
|---------------------------------|------|------|------|------|
| 160                             | 0.40 | 0.75 | 0.90 | 1.00 |
| 220 to 620                      | 0.50 | 0.85 | 0.94 | 1.00 |
| 680 to 2,000                    | 0.60 | 0.87 | 0.95 | 1.00 |
| 2,200 to 4,300                  | 0.75 | 0.90 | 0.95 | 1.00 |
| 4,700 to 12,000                 | 0.85 | 0.95 | 0.98 | 1.00 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

Please contact us for lifetime estimation.

# GVD Series

- Structure of higher vibration resistance by GPD series (acceleration 392m/s<sup>2</sup>, 40G)
- Guaranteed short time at 150°C
- Designed for electric power steering and ECU (include engine control, direct fuel injection) etc.
- Rated voltage range : 25 to 100V, Capacitance range : 510 to 8,200μF
- Solvent resistant type
- RoHS2 Compliant
- AEC-Q200 compliant : Please contact Chemi-Con for more details, test data, information.

GPD → Vibration resistance → GVD

## ◆RATED RIPPLE CURRENT MULTIPLIERS

## ●Frequency Multipliers

| Capacitance(μF) | Frequency(Hz) |      |      |      |
|-----------------|---------------|------|------|------|
|                 | 120           | 1k   | 10k  | 100k |
| 510             | 0.50          | 0.85 | 0.94 | 1.00 |
| 680 to 2,000    | 0.60          | 0.87 | 0.95 | 1.00 |
| 2,400 to 3,600  | 0.75          | 0.90 | 0.95 | 1.00 |
| 4,700 to 8,200  | 0.85          | 0.95 | 0.98 | 1.00 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

Please contact us for lifetime estimation.

## GQB Series

- Endurance with ripple current : 1,000 hours at 150°C
- For automobile transmission, electric water pump and other high temperature applications.
- Rated voltage range : 25 & 35V, Nominal capacitance range : 560 to 3,600μF
- Solvent resistant type (see PRECAUTIONS AND GUIDELINES)
- RoHS2 Compliant
- AEC-Q200 compliant : Please contact Chemi-Con for more details, test data, information.

Higher temperature  
Higher ripple current

## ◆RATED RIPPLE CURRENT MULTIPLIERS

## ● Frequency Multipliers

| Capacitance(μF) \ Frequency(Hz) | 120  | 1k   | 10k  | 100k |
|---------------------------------|------|------|------|------|
| 560                             | 0.50 | 0.85 | 0.94 | 1.00 |
| 750 to 1,800                    | 0.60 | 0.87 | 0.95 | 1.00 |
| 2,400 to 3,600                  | 0.75 | 0.90 | 0.95 | 1.00 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

Please contact us for lifetime estimation.

# LBV Series

- Downsizing of LBG series.
- For airbag application and power supply application
- High capacitance, low ESR and good low temperature behavior
- Endurance with ripple current : 5,000 hours at 105°C
- Solvent resistant type (see PRECAUTIONS AND GUIDELINES)
- RoHS2 Compliant
- AEC-Q200 compliant : Please contact Chemi-Con for more details, test data, information.

## SPECIFICATIONS

## ◆RATED RIPPLE CURRENT MULTIPLIERS

## ●Frequency Multipliers

| Capacitance(μF) | Frequency(Hz) |      |      |      |
|-----------------|---------------|------|------|------|
|                 | 120           | 1k   | 10k  | 100k |
| 3,000           | 0.75          | 0.90 | 0.95 | 1.00 |
| 4,000 to 15,000 | 0.85          | 0.95 | 0.98 | 1.00 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# LBG Series

- For airbag application
- High capacitance, low impedance, and good low temperature behavior
- Endurance with ripple current : 5,000 hours at 105°C
- Solvent resistant type (see PRECAUTIONS AND GUIDELINES)
- RoHS2 Compliant
- AEC-Q200 compliant : Please contact Chemi-Con for more details, test data, information.

## SPECIFICATIONS

### ◆RATED RIPPLE CURRENT MULTIPLIERS

#### ● Frequency Multipliers

| Capacitance(μF) \ Frequency(Hz) | 120  | 1k   | 10k  | 100k |
|---------------------------------|------|------|------|------|
| 1,000 to 2,000                  | 0.60 | 0.87 | 0.95 | 1.00 |
| 2,100 to 3,800                  | 0.75 | 0.90 | 0.95 | 1.00 |
| 4,000 to 11,000                 | 0.85 | 0.95 | 0.98 | 1.00 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

## Product code guide (Snap-in type)

(Example : KMS series, 400V-330μF, φ30×30L)

Please refer to the following table

\*1 Negative terminal : Mesh marking

\*2 Use the dummy terminals for mechanical support only.

The dummy terminals must not be connected to any circuit trace on PC board, be sure to electrically isolate from the negative and the positive terminals.

# SMR Series

- Endurance with ripple current : 2,000 hours at 85°C
- Downsized and high ripple current from SMQ series
- Non solvent resistant type
- RoHS2 Compliant

| Shelf Life                                             | The following specifications shall be satisfied when the capacitors are restored to 20°C after exposing them for 1,000 hours at 85°C without voltage applied. Before the measurement, the capacitor shall be preconditioned by applying voltage according to Item 4.1 of JIS C 5101-4. |                                      |            |                  |

## ◆RATED RIPPLE CURRENT MULTIPLIERS

## ●Frequency Multipliers

| Frequency(Hz)             | 50   | 120  | 300  | 1k   | 10k  | 50k  |
|---------------------------|------|------|------|------|------|------|
| 400 to 450V <sub>dc</sub> | 0.77 | 1.00 | 1.16 | 1.30 | 1.41 | 1.43 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# SMQ Series

- Endurance with ripple current : 2,000 hours at 85°C
- Non solvent resistant type
- RoHS2 Compliant

## SPECIFICATIONS

## ◆RATED RIPPLE CURRENT MULTIPLIERS

## ●Frequency Multipliers

| Frequency(Hz)             | 50   | 120  | 300  | 1k   | 10k  | 50k  |
|---------------------------|------|------|------|------|------|------|
| 160 to 250V <sub>dc</sub> | 0.81 | 1.00 | 1.17 | 1.32 | 1.45 | 1.50 |
| 315 to 450V <sub>dc</sub> | 0.77 | 1.00 | 1.16 | 1.30 | 1.41 | 1.43 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# KHV Series

- The KMR series has been improved to have a higher capacitance and ripple current.
- Endurance with ripple current : 2,000 hours at 105°C
- Rated voltage range : 350 to 400V<sub>dc</sub>, Capacitance range : 160 to 1,610μF
- For inverter control, switching power supplies
- Non solvent resistant type
- RoHS2 Compliant
- The logo mark printed on the sleeve will be changed.

## ◆ RATED RIPPLE CURRENT MULTIPLIERS

## ● Frequency Multipliers

| Frequency(Hz)             | 50   | 120  | 300  | 1k   | 10k  | 50k  |
|---------------------------|------|------|------|------|------|------|
| 350 to 450V <sub>dc</sub> | 0.70 | 1.00 | 1.10 | 1.17 | 1.25 | 1.31 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# KHE Series

- Upgraded capacitance rating
- Endurance with ripple current : 2,000 hours at 105°C
- Rated voltage range : 400 to 450V<sub>dc</sub>, Capacitance range : 210 to 1,500μF
- Non solvent resistant type
- RoHS2 Compliant

## ◆RATED RIPPLE CURRENT MULTIPLIERS

## ●Frequency Multipliers

| Frequency(Hz) | 50   | 120  | 300  | 1k   | 10k  | 50k  |
|---------------|------|------|------|------|------|------|
| Multipliers   | 0.77 | 1.00 | 1.10 | 1.21 | 1.32 | 1.33 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# KMZ Series

- The lower temperature range of the category temperature range has been expanded.
- Downsized from KMW series
- Endurance with ripple current : 2,000 hours at 105°C
- Rated voltage range : 420 & 450V<sub>dc</sub>, Capacitance range : 120 to 820μF
- Non solvent resistant type
- RoHS2 Compliant

## SPECIFICATIONS

| Items                                                        | Characteristics                                                                                                                                                                                                                                                                       |                                       |                 |  |

## ◆RATED RIPPLE CURRENT MULTIPLIERS

## ●Frequency Multipliers

| Frequency(Hz) | 50   | 120  | 300  | 1k   | 10k  | 50k  |
|---------------|------|------|------|------|------|------|
| Multipliers   | 0.77 | 1.00 | 1.16 | 1.30 | 1.41 | 1.43 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# KMW Series

- Downsized from KMR series
- Endurance with ripple current : 2,000 hours at 105°C
- Rated voltage range : 400 to 450V<sub>dc</sub>, Capacitance range : 120 to 1,000μF
- Non solvent resistant type
- RoHS2 Compliant

## SPECIFICATIONS

## ◆RATED RIPPLE CURRENT MULTIPLIERS

## ●Frequency Multipliers

| Frequency(Hz)             | 50   | 120  | 300  | 1k   | 10k  | 50k  |
|---------------------------|------|------|------|------|------|------|
| 400 to 450V <sub>dc</sub> | 0.77 | 1.00 | 1.16 | 1.30 | 1.41 | 1.43 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# KMR Series

- Downsized 5mm in height from current snap-ins KMQ series
- Max. 50% up ripple current than same case size of KMQ series
- Endurance with ripple current : 2,000 hours at 105°C
- Rated voltage range : 160 to 450V<sub>dc</sub>, Capacitance range : 100 to 3,300μF
- For inverter control, switching power supplies
- Non solvent resistant type
- RoHS2 Compliant

## SPECIFICATIONS

## ◆RATED RIPPLE CURRENT MULTIPLIERS

●Frequency Multipliers

| Frequency(Hz)             | 50   | 120  | 300  | 1k   | 10k  | 50k  |
|---------------------------|------|------|------|------|------|------|
| 160 to 250V <sub>dc</sub> | 0.81 | 1.00 | 1.17 | 1.32 | 1.45 | 1.50 |
| 315 to 450V <sub>dc</sub> | 0.77 | 1.00 | 1.16 | 1.30 | 1.41 | 1.43 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# KMQ Series

- Endurance with ripple current : 2,000 hours at 105°C
- Non solvent resistant type
- RoHS2 Compliant

## SPECIFICATIONS

| Items                                                  | Characteristics                                                                                                                                                                                                                                                                       |                                       |            |             |            |             |             |            |                 |

## KMQ Series

### ◆ RATED RIPPLE CURRENT MULTIPLIERS

#### ● Frequency Multipliers

| Frequency(Hz)             | 50   | 120  | 300  | 1k   | 10k  | 50k  |
|---------------------------|------|------|------|------|------|------|
| 35, 50V <sub>dc</sub>     | 0.95 | 1.00 | 1.03 | 1.05 | 1.08 | 1.08 |
| 160 to 250V <sub>dc</sub> | 0.81 | 1.00 | 1.17 | 1.32 | 1.45 | 1.50 |
| 315 to 450V <sub>dc</sub> | 0.77 | 1.00 | 1.16 | 1.30 | 1.41 | 1.43 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# RLB Series

- Endurance with ripple current : 5,000 hours at 85°C
- High ripple current capability in a commercial frequency range
- High ripple current for inverter control like air conditioner
- Rated voltage range : 180 to 250Vdc, Capacitance range : 600 to 2,200μF
- Non solvent resistant type
- RoHS2 Compliant

RLB

Longer life

RLA

## ◆RATED RIPPLE CURRENT MULTIPLIERS

## ●Frequency Multipliers

| Frequency(Hz)             | 50   | 120  | 300  | 1k   | 10k  | 50k  |
|---------------------------|------|------|------|------|------|------|
| 180 to 250V <sub>dc</sub> | 0.70 | 1.00 | 1.17 | 1.32 | 1.45 | 1.50 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# RLA Series

- Endurance with ripple current : 3,000 hours at 85°C
- High ripple current capability in a commercial frequency range
- High ripple current for inverter control like air conditioner
- Rated voltage range : 180 to 250Vdc, Capacitance range : 600 to 2,200 $\mu$ F
- Non solvent resistant type
- RoHS2 Compliant

## SPECIFICATIONS

### ◆RATED RIPPLE CURRENT MULTIPLIERS

#### ●Frequency Multipliers

| Frequency(Hz)             | 50   | 120  | 300  | 1k   | 10k  | 50k  |
|---------------------------|------|------|------|------|------|------|
| 180 to 250V <sub>dc</sub> | 0.70 | 1.00 | 1.17 | 1.32 | 1.45 | 1.50 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

### KLA Series

- Endurance with ripple current : 3,000 hours at 105°C
- High ripple current capability in a commercial frequency range
- High ripple current for inverter control like air conditioner
- Rated voltage range : 180 to 250V<sub>dc</sub>, Capacitance range : 600 to 2,000μF
- Non solvent resistant type
- RoHS2 Compliant

## ◆RATED RIPPLE CURRENT MULTIPLIERS

## ●Frequency Multipliers

| Frequency(Hz)             | 50   | 120  | 300  | 1k   | 10k  | 50k  |
|---------------------------|------|------|------|------|------|------|
| 180 to 250V <sub>dc</sub> | 0.70 | 1.00 | 1.17 | 1.32 | 1.45 | 1.50 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# SMM Series

- Longer life from SMQ series
- Endurance with ripple current : 3,000 hours at 85°C
- Non solvent resistant type
- RoHS2 Compliant

## DIMENSIONS [mm]

● Terminal Code : VS (φ22 to φ35) : Standard

\*φD=35mm : 3.5±0.5mm

The standard design has no plastic disc.

● Terminal Code : LI (φ35)

## PART NUMBERING SYSTEM

Please refer to "Product code guide (snap-in type)"

## RATED RIPPLE CURRENT MULTIPLIERS

● Frequency Multipliers

| Frequency(Hz)             | 50   | 120  | 300  | 1k   | 10k  | 50k  |
|---------------------------|------|------|------|------|------|------|
| 160 to 250V <sub>dc</sub> | 0.81 | 1.00 | 1.17 | 1.32 | 1.45 | 1.50 |
| 315 to 450V <sub>dc</sub> | 0.77 | 1.00 | 1.16 | 1.30 | 1.41 | 1.43 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# KRB Series

- Higher ripple current on high frequency band
- Endurance with high frequency ripple current : 3,000 hours at 105°C
- Rated voltage range : 400 to 450V<sub>dc</sub>, Capacitance range : 90 to 340μF
- Ideal for high frequency drive power conversion system applications such as solar power conditioners
- Non solvent resistant type
- RoHS2 Compliant

## SPECIFICATIONS

## ◆RATED RIPPLE CURRENT MULTIPLIERS

## ●Frequency Multipliers

| Frequency(Hz) | 50   | 120  | 300  | 1k   | 10k  | 50k  | 100k |
|---------------|------|------|------|------|------|------|------|
| 400 to 450V   | 0.22 | 0.33 | 0.49 | 0.73 | 1.00 | 1.00 | 1.00 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

## KHJ Series

- Higher ripple current from KMT series
- Endurance with ripple current : 3,000 hours at 105°C
- Rated voltage range : 400 to 450V<sub>dc</sub>, Capacitance range : 240 to 820μF
- For inverter control, switching power supplies
- Non solvent resistant type
- RoHS2 Compliant

KHJ

Higher ripple  
KMT

## ◆SPECIFICATIONS

## ◆RATED RIPPLE CURRENT MULTIPLIERS

●Frequency Multipliers

| Frequency(Hz) | 50   | 120  | 300  | 1k   | 10k  | 50k  |
|---------------|------|------|------|------|------|------|
| 400 to 450V   | 0.72 | 1.00 | 1.21 | 1.38 | 1.48 | 1.46 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# KMT Series

- Higher ripple current from KMS series
- Endurance with ripple current : 3,000 hours at 105°C
- Rated voltage range : 420, 450V<sub>dc</sub>, Capacitance range : 82 to 680μF
- For inverter control, switching power supplies
- Non solvent resistant type
- RoHS2 Compliant

KMT

Higher ripple

| Shelf Life                                             | The following specifications shall be satisfied when the capacitors are restored to 20°C after exposing them for 1,000 hours at 105°C without voltage applied. Before the measurement, the capacitor shall be preconditioned by applying voltage according to Item 4.1 of JIS C 5101-4. |                                       |                  |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# KHX Series

New!

- The KMS series has been improved to have a higher capacitance and ripple current.
- Endurance with ripple current : 105°C 3,000 hours
- Rated voltage range : 350 to 400V
- Capacitance range : 150 to 1,570μF
- Suitable for use in switching power supply equipment and inverters.
- Non solvent resistant type
- The logo mark printed on the sleeve will be changed.
- RoHS2 Compliant

## ◆ RATED RIPPLE CURRENT MULTIPLIERS

### ● Frequency Multipliers

| Frequency(Hz)             | 50   | 120  | 300  | 1k   | 10k  | 50k  |
|---------------------------|------|------|------|------|------|------|
| 350 to 400V <sub>dc</sub> | 0.70 | 1.00 | 1.10 | 1.17 | 1.25 | 1.31 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# KHU Series Upgrade!

- Lineup of high withstand voltage products for server power supplies and solar power generation applications
- Endurance with ripple current : 3,000 hours at 105°C
- Rated voltage range: 400 to 500V, Capacitance range: 120 to 1,910μF
- Non solvent resistant type
- RoHS2 Compliant

## ◆RATED RIPPLE CURRENT MULTIPLIERS

### ● Frequency Multipliers

| Frequency(Hz)             | 50   | 120  | 300  | 1k   | 10k  | 50k  |
|---------------------------|------|------|------|------|------|------|
| 400 to 450V <sub>dc</sub> | 0.77 | 1.00 | 1.10 | 1.21 | 1.32 | 1.33 |
| 475, 500V <sub>dc</sub>   | 0.77 | 1.00 | 1.11 | 1.20 | 1.25 | 1.33 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# KHS Series

- For solar power generation
- Endurance with ripple current : 3,000 hours at 105°C
- Rated voltage range: 450 to 500V, Capacitance range: 68 to 1,000μF
- Non solvent resistant type
- RoHS2 Compliant

## ◆RATED RIPPLE CURRENT MULTIPLIERS

●Frequency Multipliers

| Frequency(Hz)      | 50   | 120  | 300  | 1k   | 10k  | 50k  |
|--------------------|------|------|------|------|------|------|
| 450V <sub>dc</sub> | 0.77 | 1.00 | 1.16 | 1.30 | 1.41 | 1.43 |
| 475V <sub>dc</sub> | 0.77 | 1.00 | 1.11 | 1.20 | 1.25 | 1.33 |
| 500V <sub>dc</sub> | 0.70 | 1.00 | 1.16 | 1.30 | 1.41 | 1.43 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# KMS Series

- The lower temperature range of the category temperature range has been expanded.
- For solar power generation
- Endurance with ripple current : 105°C 3,000 hours
- Rated voltage range : 160 to 600V
- Capacitance range : 47 to 3,300μF
- Non solvent resistant type
- RoHS2 Compliant

**600V  
Lineup!**

## SPECIFICATIONS

| Items                                                        | Characteristics                                                                                                                                                                                                                                                                       |                                                                   |                                          |                 |

## ◆RATED RIPPLE CURRENT MULTIPLIERS

## ●Frequency Multipliers

| Frequency(Hz)             | 50   | 120  | 300  | 1k   | 10k  | 50k  |
|---------------------------|------|------|------|------|------|------|
| 160 to 250V <sub>dc</sub> | 0.81 | 1.00 | 1.17 | 1.32 | 1.45 | 1.50 |
| 315 to 450V <sub>dc</sub> | 0.77 | 1.00 | 1.16 | 1.30 | 1.41 | 1.43 |
| 500 to 600V <sub>dc</sub> | 0.70 | 1.00 | 1.16 | 1.30 | 1.41 | 1.43 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# KMM Series

- Longer life from KMQ series
- Endurance with ripple current : 2,000 to 3,000 hours at 105°C
- Non solvent resistant type
- RoHS2 Compliant

## SPECIFICATIONS

## ◆RATED RIPPLE CURRENT MULTIPLIERS

●Frequency Multipliers

| Frequency(Hz)             | 50   | 120  | 300  | 1k   | 10k  | 50k  |
|---------------------------|------|------|------|------|------|------|
| 160 to 250V <sub>dc</sub> | 0.81 | 1.00 | 1.17 | 1.32 | 1.45 | 1.50 |
| 315 to 450V <sub>dc</sub> | 0.77 | 1.00 | 1.16 | 1.30 | 1.41 | 1.43 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# SMH Series

- Endurance with ripple current : 2,000 hours at 85°C
- Non solvent resistant type
- RoHS2 Compliant

## ◆DIMENSIONS [mm]

● Terminal Code : VS (φ22 to φ35) : Standard

\*φD=35mm : 3.5±0.5mm

The standard design has no plastic disc.

● Terminal Code : LI (φ35)

## ◆PART NUMBERING SYSTEM

Please refer to "Product code guide (snap-in type)"

\*For the rated voltage ≥ 160V<sub>dc</sub>, please use SMQ series

## ◆RATED RIPPLE CURRENT MULTIPLIERS

## ● Frequency Multipliers

| Frequency(Hz)            | 50   | 120  | 300  | 1k   | 10k  | 50k  |
|--------------------------|------|------|------|------|------|------|
| 6.3 to 50V <sub>dc</sub> | 0.95 | 1.00 | 1.03 | 1.05 | 1.08 | 1.08 |
| 63 to 100V <sub>dc</sub> | 0.92 | 1.00 | 1.07 | 1.13 | 1.19 | 1.20 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# KMH Series

- Endurance with ripple current : 2,000 hours at 105°C
- Non solvent resistant type
- RoHS2 Compliant

KMM

Downsized  
Longer life

KMH

## SPECIFICATIONS

\*For the rated voltage  $\geq 160V_{dc}$ , please use KMR and KMQ series.

## ◆RATED RIPPLE CURRENT MULTIPLIERS

## ●Frequency Multipliers

| Frequency(Hz)            | 50   | 120  | 300  | 1k   | 10k  | 50k  |
|--------------------------|------|------|------|------|------|------|
| 6.3 to 50V <sub>dc</sub> | 0.95 | 1.00 | 1.03 | 1.05 | 1.08 | 1.08 |
| 63 to 100V <sub>dc</sub> | 0.92 | 1.00 | 1.07 | 1.13 | 1.19 | 1.20 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

## TXH Series

- Endurance with ripple current : 10,000 hours at 105°C
- Non solvent resistant type
- RoHS2 Compliant

TXH

Longer life

LXM

## ◆ SPECIFICATIONS

## ◆ RATED RIPPLE CURRENT MULTIPLIERS

## ● Frequency Multipliers

| Frequency(Hz)           | 50   | 120  | 300  | 1k   | 10k  | 50k  |
|-------------------------|------|------|------|------|------|------|
| 200, 250V <sub>dc</sub> | 0.81 | 1.00 | 1.17 | 1.32 | 1.45 | 1.50 |
| 400, 450V <sub>dc</sub> | 0.77 | 1.00 | 1.16 | 1.30 | 1.41 | 1.43 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# LXM Series

- Endurance with ripple current : 7,000 hours at 105°C
- Non solvent resistant type
- RoHS2 Compliant

LXM

Longer life

LXQ

## SPECIFICATIONS

## ◆RATED RIPPLE CURRENT MULTIPLIERS

## ●Frequency Multipliers

| Frequency(Hz)             | 50   | 120  | 300  | 1k   | 10k  | 50k  |
|---------------------------|------|------|------|------|------|------|
| 160 to 250V <sub>dc</sub> | 0.81 | 1.00 | 1.17 | 1.32 | 1.45 | 1.50 |
| 315 to 450V <sub>dc</sub> | 0.77 | 1.00 | 1.16 | 1.30 | 1.41 | 1.43 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# LRB Series

- Higher ripple current on high frequency band
- Endurance with high frequency ripple current : 5,000 hours at 105°C
- Rated voltage range : 400 to 450V<sub>dc</sub>, Capacitance range : 85 to 330μF
- Ideal for high frequency drive power conversion system applications such as solar power conditioners
- Non solvent resistant type
- RoHS2 Compliant

## SPECIFICATIONS

## ◆RATED RIPPLE CURRENT MULTIPLIERS

## ●Frequency Multipliers

| Frequency(Hz) | 50   | 120  | 300  | 1k   | 10k  | 50k  | 100k |
|---------------|------|------|------|------|------|------|------|
| 400 to 450V   | 0.22 | 0.33 | 0.49 | 0.73 | 1.00 | 1.00 | 1.00 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# LHX Series

New!

- The LXS series has been improved to have a higher capacitance and ripple current.
- Endurance with ripple current : 5,000 hours at 105°C
- Rated voltage range : 350 to 400V, Capacitance range: 190 to 1,530μF
- Suitable for use in switching power supply equipment and inverters.
- Non solvent resistant type
- The logo mark printed on the sleeve will be changed.
- RoHS2 Compliant

## ◆ RATED RIPPLE CURRENT MULTIPLIERS

## ● Frequency Multipliers

| Frequency(Hz)             | 50   | 120  | 300  | 1k   | 10k  | 50k  |
|---------------------------|------|------|------|------|------|------|
| 350 to 400V <sub>dc</sub> | 0.70 | 1.00 | 1.10 | 1.17 | 1.25 | 1.31 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# LHJ Series

- Higher ripple current from LXS series
- Endurance with ripple current : 5,000 hours at 105°C
- Rated voltage range : 400 to 450V<sub>dc</sub>, Capacitance range : 220 to 810μF
- For inverter control, switching power supplies
- Non solvent resistant type
- RoHS2 Compliant

LHJ

Higher ripple  
LXS

## SPECIFICATIONS

## ◆RATED RIPPLE CURRENT MULTIPLIERS

● Frequency Multipliers

| Frequency(Hz) | 50   | 120  | 300  | 1k   | 10k  | 50k  |
|---------------|------|------|------|------|------|------|
| 400 to 450V   | 0.72 | 1.00 | 1.21 | 1.38 | 1.48 | 1.46 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# LHU Series

Upgrade!

- Lineup of high withstand voltage products for server power supplies and solar power generation applications
- Endurance with ripple current : 5,000 hours at 105°C
- Rated voltage range: 400 to 500V, Capacitance range: 120 to 1,910μF
- Non solvent resistant type
- RoHS2 Compliant

## ◆RATED RIPPLE CURRENT MULTIPLIERS

### ● Frequency Multipliers

| Frequency(Hz)             | 50   | 120  | 300  | 1k   | 10k  | 50k  |
|---------------------------|------|------|------|------|------|------|
| 400 to 450V <sub>dc</sub> | 0.77 | 1.00 | 1.10 | 1.21 | 1.32 | 1.33 |
| 475, 500V <sub>dc</sub>   | 0.77 | 1.00 | 1.11 | 1.20 | 1.25 | 1.33 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# LHS Series

- The lower temperature range of the category temperature range has been expanded.
- For solar power generation
- Endurance with ripple current : 5,000 hours at 105°C
- Rated voltage range : 450 to 500V
- For inverter control, switching power supplies
- Non solvent resistant type
- RoHS2 Compliant

## ◆RATED RIPPLE CURRENT MULTIPLIERS

## ● Frequency Multipliers

| Frequency(Hz)           | 50   | 120  | 300  | 1k   | 10k  | 50k  |
|-------------------------|------|------|------|------|------|------|
| 450V <sub>dc</sub>      | 0.77 | 1.00 | 1.16 | 1.30 | 1.41 | 1.43 |
| 475, 500V <sub>dc</sub> | 0.70 | 1.00 | 1.16 | 1.30 | 1.41 | 1.43 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# LXS Series

- For solar power generation
- Endurance with ripple current : 5,000 hours at 105°C
- Rated voltage range : 160 to 600V
- Downsized from LXQ series
- Non solvent resistant type
- RoHS2 Compliant

## SPECIFICATIONS

## ◆RATED RIPPLE CURRENT MULTIPLIERS

## ●Frequency Multipliers

| Frequency(Hz)             | 50   | 120  | 300  | 1k   | 10k  | 50k  |
|---------------------------|------|------|------|------|------|------|
| 160 to 250V <sub>dc</sub> | 0.81 | 1.00 | 1.17 | 1.32 | 1.45 | 1.50 |
| 315 to 450V <sub>dc</sub> | 0.77 | 1.00 | 1.16 | 1.30 | 1.41 | 1.43 |
| 500 to 600V <sub>dc</sub> | 0.70 | 1.00 | 1.16 | 1.30 | 1.41 | 1.43 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# LXQ Series

- Endurance with ripple current : 5,000 hours at 105°C
- Downsized and higher ripple version of LXG series
- Non solvent resistant type
- RoHS2 Compliant

## SPECIFICATIONS

## ◆RATED RIPPLE CURRENT MULTIPLIERS

## ●Frequency Multipliers

| Frequency(Hz)             | 50   | 120  | 300  | 1k   | 10k  | 50k  |
|---------------------------|------|------|------|------|------|------|
| 160 to 250V <sub>dc</sub> | 0.81 | 1.00 | 1.17 | 1.32 | 1.45 | 1.50 |
| 315 to 450V <sub>dc</sub> | 0.77 | 1.00 | 1.16 | 1.30 | 1.41 | 1.43 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

## LXG Series

- Endurance with ripple current : 5,000 hours at 105°C
- Non solvent resistant type
- RoHS2 Compliant

LXG

Longer life

KMQ

### SPECIFICATIONS

| 63 to 100V <sub>dc</sub> | 0.92 | 1.00 | 1.07 | 1.13 | 1.19 | 1.20 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

## LVA Series

- Designed for automotive application (including On Board Charger) by high vibration resistance structure.
- Endurance with ripple current : 5,000 hours at 105°C
- Rated voltage range : 450V<sub>dc</sub>, Capacitance range : 150 to 890μF
- Non solvent resistant type
- RoHS2 Compliant
- AEC-Q200 compliant : Please contact Chemi-Con for more details, test data, information.

## ◆SPECIFICATIONS

## ◆RATED RIPPLE CURRENT MULTIPLIERS

## ⊙Frequency Multipliers

| Frequency(Hz) | 50   | 120  | 300  | 1k   | 10k  | 50k  |
|---------------|------|------|------|------|------|------|
| 450V          | 0.77 | 1.00 | 1.16 | 1.30 | 1.41 | 1.43 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

## KVB Series

- Designed for automotive application (including On Board Charger) by high vibration resistance structure.
- Endurance with ripple current : 3,000 hours at 105°C
- Rated voltage range : 450V<sub>dc</sub>, Capacitance range : 150 to 920μF
- Non solvent resistant type
- RoHS2 Compliant
- AEC-Q200 compliant : Please contact Chemi-Con for more details, test data, information.

## ◆RATED RIPPLE CURRENT MULTIPLIERS

## ●Frequency Multipliers

| Frequency(Hz) | 50   | 120  | 300  | 1k   | 10k  | 50k  |
|---------------|------|------|------|------|------|------|
| 450V          | 0.77 | 1.00 | 1.16 | 1.30 | 1.41 | 1.43 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# KVA Series

- Designed for automotive application (including On Board Charger) by high vibration resistance structure.
- Endurance with ripple current : 2,000 hours at 105°C
- Rated voltage range : 450V<sub>dc</sub>, Capacitance range : 160 to 970μF
- Non solvent resistant type
- RoHS2 Compliant
- AEC-Q200 compliant : Please contact Chemi-Con for more details, test data, information.

## SPECIFICATIONS

## ◆RATED RIPPLE CURRENT MULTIPLIERS

## ●Frequency Multipliers

| Frequency(Hz) | 50   | 120  | 300  | 1k   | 10k  | 50k  |
|---------------|------|------|------|------|------|------|
| 450V          | 0.77 | 1.00 | 1.16 | 1.30 | 1.41 | 1.43 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# GXA<sub>Series</sub>

- Endurance with ripple current : 3,000 hours at 125°C
- Rated voltage range : 400 & 450V<sub>dc</sub>, Capacitance range : 220 to 820μF
- Suitable for the communication infrastructure power supply and other high temperature applications.
- Non solvent resistant type
- RoHS2 Compliant

## SPECIFICATIONS

### ◆RATED RIPPLE CURRENT MULTIPLIERS

#### ●Frequency Multipliers

| Frequency(Hz)            | 50   | 120  | 300  | 1k   | 10k  | 50k  |
|--------------------------|------|------|------|------|------|------|
| 400 & 450V <sub>dc</sub> | 0.77 | 1.00 | 1.16 | 1.30 | 1.41 | 1.43 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

## CHA Series

- Doesn't spark with DC over voltage
- Downsized from current KLG series
- Endurance with ripple current : 2,000 hours at 105°C
- Non solvent resistant type
- RoHS2 Compliant

### SPECIFICATIONS

| Shelf Life                                            | The following specifications shall be satisfied when the capacitors are restored to 20℃ after exposing them for 1,000 hours at 105℃ without voltage applied. Before the measurement, the capacitor shall be preconditioned by applying voltage according to Item 4.1 of JIS C 5101-4. |                                       |                 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

### ◆DC OVERVOLTAGE TEST CONDITIONS

The vent will operate and the capacitor shall become an open circuit without burning materials when the following test DC voltage is applied.

#### ●Test DC voltage

| Rated Voltage      | Nominal Capacitance | Current Limit | Test Voltage           |
|--------------------|---------------------|---------------|------------------------|
| 200V <sub>dc</sub> | <330μF              | 4A            | 300/375V <sub>dc</sub> |
|                    | 330μF ≤ C < 470μF   | 5A            |                        |
|                    | ≥ 470μF             | 7A            |                        |
| 250V <sub>dc</sub> | <330μF              | 4A            | 350/450V <sub>dc</sub> |
|                    | 330μF ≤ C < 470μF   | 5A            |                        |
|                    | ≥ 470μF             | 7A            |                        |
| 400V <sub>dc</sub> | <100μF              | 2A            | 500/600V <sub>dc</sub> |
|                    | 100μF ≤ C < 220μF   | 4A            |                        |
|                    | ≥ 220μF             | 7A            |                        |
| 450V <sub>dc</sub> | <100μF              | 2A            | 550/675V <sub>dc</sub> |
|                    | 100μF ≤ C < 220μF   | 4A            |                        |
|                    | ≥ 220μF             | 7A            |                        |

#### ●Test Circuit

# KMV Series

- For frequently change of regenerative voltage from AC servo amplifier and inverter control
- Ideal use to power supply, specially power source with turn on and off frequently and highly voltage fluctuation
- Improved the resistance for charge and discharge from same dimension of KMQ series
- Endurance with ripple current : 3,000 hours at 105°C
- Rated voltage range : 350 to 450V<sub>dc</sub>, Capacitance 82 to 1,200μF
- Non solvent resistant type
- RoHS2 Compliant

\*Please consult with us about charge and discharge conditions.

## DIMENSIONS [mm]

- Terminal Code : VS (φ22 to φ35) : Standard

No plastic disk is the standard design.

- Terminal Code : LI (φ35)

## KMV Series

## ◆PART NUMBERING SYSTEM

## KMV Series

### ◆RATED RIPPLE CURRENT MULTIPLIERS

#### ● Frequency Multipliers

| Frequency(Hz) | 50   | 120  | 300  | 1k   | 10k  | 50k  |
|---------------|------|------|------|------|------|------|
| Coefficient   | 0.77 | 1.00 | 1.16 | 1.30 | 1.41 | 1.43 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

## Product code guide (Screw mount terminal type)

(Example : KMH series, 400V-3,300μF, φ 63.5×120L, Without mounting clamp)

Please refer to the following table

| Contents | Code | Series | Code | Type           | Code | Tol.(%) | Code | Sleeve Material | Plastic disk | Code |
|----------|------|--------|------|----------------|------|---------|------|-----------------|--------------|------|
| Polar    | E    | KMH    | KMH  | Screw terminal | LG   | ±20     | M    | PVC             | Provided     | U    |

|          |             |   |   |              |   |   |               |                     |    |                  |    |    |                       |           |    |                 |    |

### DIMENSIONS (Screw-Mount) [mm]

#### Terminal Code : LG

φ35 to φ63.5 : G=6  
φ76.2 & φ89 : G=5

<Screw specifications>

Plus hexagon-headed screw :M5×0.8×10

Maximum screw tightening torque :3.23Nm

\* The screw and the mounting clamp are separately supplied and not attached to the product.

#### Mounting Clamp Code : B

| φD   | A     | B    | W    | H   | F    |
|------|-------|------|------|-----|------|
| 35   | 58.0  | 44.0 | 48.0 | 3.5 | 12.7 |
| 50   | 78.0  | 64.0 | 68.0 | 4.5 | 22.4 |
| 63.5 | 90.0  | 76.0 | 80.0 | 4.5 | 28.0 |
| 76.2 | 104.5 | 90.0 | 93.5 | 4.5 | 31.5 |

#### Mounting Clamp Code : C

| φD   | E    | K    | J    | F    |
|------|------|------|------|------|
| 50   | 32.5 | 37.0 | 14.0 | 22.4 |
| 63.5 | 38.1 | 43.5 | 14.0 | 28.0 |
| 76.2 | 44.5 | 50.0 | 14.0 | 31.5 |
| 89   | 50.8 | 56.5 | 16.0 | 31.5 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# LARGE CAPACITANCE ALUMINUM ELECTROLYTIC CAPACITORS Standard screw terminals, 105°C

## KMQ Series

- Endurance with ripple current : 2,000 hours at 105°C
- Downsized and high ripple current from KMH series
- RoHS2 Compliant

KMQ

Downsized  
Higher ripple  
KMH

### DIMENSIONS (Screw-Mount) [mm]

Terminal Code : LG

φ35 to φ63.5 : G=6  
φ76.2 & φ89 : G=5

<Screw specifications>

Plus hexagon-headed screw : M5×0.8×10

Maximum screw tightening torque : 3.23Nm

\* The screw and the mounting clamp are separately supplied and not attached to the product.

Mounting Clamp Code : B

| φD   | A     | B    | W    | H   | F    |
|------|-------|------|------|-----|------|
| 35   | 58.0  | 44.0 | 48.0 | 3.5 | 12.7 |
| 50   | 78.0  | 64.0 | 68.0 | 4.5 | 22.4 |
| 63.5 | 90.0  | 76.0 | 80.0 | 4.5 | 28.0 |
| 76.2 | 104.5 | 90.0 | 93.5 | 4.5 | 31.5 |

Mounting Clamp Code : C

| φD   | E    | K    | J    | F    |
|------|------|------|------|------|
| 50   | 32.5 | 37.0 | 14.0 | 22.4 |
| 63.5 | 38.1 | 43.5 | 14.0 | 28.0 |
| 76.2 | 44.5 | 50.0 | 14.0 | 31.5 |
| 89   | 50.8 | 56.5 | 16.0 | 31.5 |

### ◆RATED RIPPLE CURRENT MULTIPLIERS

●Frequency Multipliers

| Frequency (Hz) | 50   | 120  | 300  | 1k   | 3k   |
|----------------|------|------|------|------|------|
| φ 35, 50       | 0.70 | 1.00 | 1.30 | 1.70 | 1.80 |
| φ 63.5 to 89   | 0.80 | 1.00 | 1.10 | 1.15 | 1.15 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# LARGE CAPACITANCE ALUMINUM ELECTROLYTIC CAPACITORS Standard screw terminals, 105°C

## KMH Series

- Endurance with ripple current : 2,000 hours at 105°C
- RoHS2 Compliant

### SPECIFICATIONS

| Items                           | Characteristics                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                    |                             |              |                                       |                 |                               |

### DIMENSIONS (Screw-Mount) [mm]

●Terminal Code : LG

φ35 to φ63.5 : G=6  
φ76.2 & φ89 : G=5

<Screw specifications>

Plus hexagon-headed screw : M5×0.8×10

Maximum screw tightening torque : 3.23Nm

\* The screw and the mounting clamp are separately supplied and not attached to the product.

●Mounting Clamp Code : B

| φD   | A     | B    | W    | H   | F    |
|------|-------|------|------|-----|------|
| 35   | 58.0  | 44.0 | 48.0 | 3.5 | 12.7 |
| 50   | 78.0  | 64.0 | 68.0 | 4.5 | 22.4 |
| 63.5 | 90.0  | 76.0 | 80.0 | 4.5 | 28.0 |
| 76.2 | 104.5 | 90.0 | 93.5 | 4.5 | 31.5 |

●Mounting Clamp Code : C

| φD   | E    | K    | J    | F    |
|------|------|------|------|------|
| 50   | 32.5 | 37.0 | 14.0 | 22.4 |
| 63.5 | 38.1 | 43.5 | 14.0 | 28.0 |
| 76.2 | 44.5 | 50.0 | 14.0 | 31.5 |
| 89   | 50.8 | 56.5 | 16.0 | 31.5 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

# RWX Series

- Higher capacitance than RWF series.
- Endurance with ripple current : 5,000 hours at 85°C
- Suitable for UPS devices and servo press machines where higher capacitance is required.
- RoHS2 compliant

RWX

Higher capacitance

RWF

## SPECIFICATIONS

&lt;Screw specifications&gt;

to φ89 Plus hexagon-headed screw : M5×0.8×10  
 Maximum screw tightening torque : 3.23Nm

φ100 Cross-recessed head (Phillips) screw : M8×1.25×16  
 Spring washer, Washer  
 Maximum screw tightening torque : 6.31Nm

\* The screw and the mounting clamp are separately supplied and not attached to the product.

### ◆RATED RIPPLE CURRENT MULTIPLIERS

● Frequency Multipliers

| Frequency (Hz) | 50  | 120 | 300 | 1k  | 3k  |
|----------------|-----|-----|-----|-----|-----|
| Coefficient    | 0.8 | 1.0 | 1.1 | 1.2 | 1.2 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

Also, for the RWX series capacitors, using them at operating voltage less than their rated voltage can extend their lifetime. For details, please contact a representative of Nippon Chemi-Con.

# RWK Series

- Downsized and high ripple current from RWH series
- Endurance with ripple current : 5,000 hours at 85°C
- RoHS2 Compliant

RWK

Downsized

RWH

## SPECIFICATIONS

## DIMENSIONS (Screw-Mount) [mm]

●Terminal Code : LG

φ63.5, φ76.2 : G=6  
φ89 : G=4

●Mounting Clamp Code : B

●Mounting Clamp Code : C

<Screw specifications>

Plus hexagon-headed screw : M5×0.8×10

Maximum screw tightening torque : 3.23Nm

\* The screw and the mounting clamp are separately supplied and not attached to the product.

## PART NUMBERING SYSTEM

Please refer to "Product code guide (screw-mount terminal type)"

## RWK Series

### ◆RATED RIPPLE CURRENT MULTIPLIERS

● Frequency Multipliers

| Frequency (Hz) | 50  | 120 | 300 | 1k  | 3k  |
|----------------|-----|-----|-----|-----|-----|
| Coefficient    | 0.8 | 1.0 | 1.1 | 1.3 | 1.4 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

Also, for the RWK series capacitors, using them at operating voltage less than their rated voltage can extend their lifetime. For details, please contact a representative of Nippon Chemi-Con.

# RWH Series

- Downsized and high ripple current from RWF series
- Endurance with ripple current : 5,000 hours at 85°C
- RoHS2 Compliant

RWK  
Higher ripple  
**RWH**  
Downsized  
Higher ripple  
RWF

## SPECIFICATIONS

## DIMENSIONS (Screw-Mount) [mm]

●Terminal Code : LG

φ63.5, φ76.2 : G=6  
φ89 : G=4

●Mounting Clamp Code : B

| φD   | A     | B    | W    | F    |
|------|-------|------|------|------|
| 63.5 | 90.0  | 76.0 | 80.0 | 28.0 |
| 76.2 | 104.5 | 90.0 | 93.5 | 31.5 |

●Mounting Clamp Code : C

| φD   | E    | K    | F    | J    |
|------|------|------|------|------|
| 63.5 | 38.1 | 43.5 | 28.0 | 14.0 |
| 76.2 | 44.5 | 50.0 | 31.5 | 14.0 |
| 89   | 50.8 | 56.5 | 31.5 | 16.0 |

<Screw specifications>

Plus hexagon-headed screw : M5×0.8×10

Maximum screw tightening torque : 3.23Nm

\* The screw and the mounting clamp are separately supplied and not attached to the product.

## PART NUMBERING SYSTEM

## ◆RATED RIPPLE CURRENT MULTIPLIERS

## ●Frequency Multipliers

| Frequency (Hz) | 50  | 120 | 300 | 1k  | 3k  |
|----------------|-----|-----|-----|-----|-----|
| Coefficient    | 0.8 | 1.0 | 1.1 | 1.3 | 1.4 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

Also, for the RWH series capacitors, using them at operating voltage less than their rated voltage can extend their lifetime. For details, please contact a representative of Nippon Chemi-Con.

## ◆USEFUL LIFE

Useful life depending on the ambient temperature  $T_x$  under ripple current operating conditions

## ◆Warning !

Useful life shall indicate the end of the life time without exceeding the specified failure rate. It's generally known that Aluminum Electrolytic Capacitors have wear-out failure mode with gradual deterioration of the electrical parameters and should have large number of the failure rate at the end of life. The useful life time is specified by a certain failure rate. It's not a guaranteed specification.

Generally the maximum life time is 15 years (131,000hours) considering sealing material deteriorate. When a longer life time is required for your application, please consult us.

## RWF Series

- High ripple capability
- Endurance with ripple current : 5,000 hours at 85°C
- Wide range of case sizes from  $\phi 50$  to  $\phi 100$
- RoHS2 Compliant

## ◆ SPECIFICATIONS

| Items                           | Characteristics                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                    |                             |              |                                       |                 |                               |

## ◆ DIMENSIONS (Screw-Mount) [mm]

- Terminal Code : LG

φ50 & φ63.5 : G=6  
φ76.2 & φ89 : G=5  
φ100 : G=10

<Screw specifications>

to φ89 Plus hexagon-headed screw : M5×0.8×10  
Maximum screw tightening torque : 3.23Nm

- Mounting Clamp Code : B

| φD   | A     | B    | W    | F    |
|------|-------|------|------|------|
| 50   | 78.0  | 64.0 | 68.0 | 22.4 |
| 63.5 | 90.0  | 76.0 | 80.0 | 28.0 |
| 76.2 | 104.5 | 90.0 | 93.5 | 31.5 |

- Mounting Clamp Code : C

| φD   | E    | K    | M   | F    | J    |
|------|------|------|-----|------|------|
| 50   | 32.5 | 37.0 | 4.5 | 22.4 | 14.0 |
| 63.5 | 38.1 | 43.5 | 4.5 | 28.0 | 14.0 |
| 76.2 | 44.5 | 50.0 | 4.5 | 31.5 | 14.0 |
| 89   | 50.8 | 56.5 | 4.5 | 31.5 | 16.0 |
| 100  | 56.5 | 63.4 | 5.5 | 41.5 | 18.0 |

φ100 Cross-recessed head (Phillips) screw : M8×1.25×16  
Spring washer, Washer  
Maximum screw tightening torque : 6.31Nm

\* The screw and the mounting clamp are separately supplied and not attached to the product.

## ◆ RATED RIPPLE CURRENT MULTIPLIERS

## ● Frequency Multipliers

| Frequency (Hz) | 50  | 120 | 300 | 1k  | 3k  |
|----------------|-----|-----|-----|-----|-----|
| Coefficient    | 0.8 | 1.0 | 1.1 | 1.3 | 1.4 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

Also, for the RWF series capacitors, using them at operating voltage less than their rated voltage can extend their lifetime. For details, please contact a representative of Nippon Chemi-Con.

## RWU Series

- Higher capacitance than RWE series.
- Endurance with ripple current: 2,000 hours at 85°C
- Suitable for UPS devices and servo press machines where higher capacitance is required.
- RoHS2 compliant

## ◆ SPECIFICATIONS

| Items                           | Characteristics                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                    |                             |              |                                       |                 |                               |

| 100  | 56.5 | 63.4 | 5.5 | 41.5 | 18.0 |

&lt;Screw specifications&gt;

to φ89 Plus hexagon-headed screw : M5×0.8×10  
 Maximum screw tightening torque : 3.23Nm

φ100 Cross-recessed head (Phillips) screw : M8×1.25×16  
 Spring washer, Washer  
 Maximum screw tightening torque : 6.31Nm

\* The screw and the mounting clamp are separately supplied and not attached to the product.

### ◆RATED RIPPLE CURRENT MULTIPLIERS

● Frequency Multipliers

| Frequency (Hz) | 50  | 120 | 300 | 1k  | 3k  |
|----------------|-----|-----|-----|-----|-----|
| Coefficient    | 0.8 | 1.0 | 1.1 | 1.2 | 1.2 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

Also, for the RWU series capacitors, using them at operating voltage less than their rated voltage can extend their lifetime. For details, please contact a representative of Nippon Chemi-Con.

## RWJ Series

- Downsized and high ripple current from RWR series
- Endurance with ripple current : 2,000 hours at 85°C
- RoHS2 Compliant

RWJ

Downsized

RWR

## ◆SPECIFICATIONS

| Items                           | Characteristics                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                    |                             |              |                                       |                 |                               |

## ◆DIMENSIONS (Screw-Mount) [mm]

●Terminal Code : LG

φ63.5, φ76.2 : G=6  
φ89 : G=4

●Mounting Clamp Code : B

●Mounting Clamp Code : C

&lt;Screw specifications&gt;

Plus hexagon-headed screw : M5×0.8×10

Maximum screw tightening torque : 3.23Nm

\* The screw and the mounting clamp are separately supplied and not attached to the product.

## ◆PART NUMBERING SYSTEM

Please refer to "Product code guide (screw-mount terminal type)"

## RWJ Series

### ◆RATED RIPPLE CURRENT MULTIPLIERS

#### ●Frequency Multipliers

| Frequency (Hz) | 50  | 120 | 300 | 1k  | 3k  |
|----------------|-----|-----|-----|-----|-----|
| Coefficient    | 0.8 | 1.0 | 1.1 | 1.3 | 1.4 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

Also, for the RWJ series capacitors, using them at operating voltage less than their rated voltage can extend their lifetime. For details, please contact a representative of Nippon Chemi-Con.

# LARGE CAPACITANCE ALUMINUM ELECTROLYTIC CAPACITORS Inverter-use screw terminal, 85°C

## RWR Series

- Downsized and high ripple current from RWQ series
- Endurance with ripple current : 2,000 hours at 85°C
- RoHS2 Compliant

### SPECIFICATIONS

### DIMENSIONS (Screw-Mount) [mm]

#### ●Terminal Code : LG

φ63.5, φ76.2 : G=6  
φ89 : G=4

#### ●Mounting Clamp Code : B

| φD   | A     | B    | W    | F    |
|------|-------|------|------|------|
| 63.5 | 90.0  | 76.0 | 80.0 | 28.0 |
| 76.2 | 104.5 | 90.0 | 93.5 | 31.5 |

#### ●Mounting Clamp Code : C

| φD   | E    | K    | F    | J    |
|------|------|------|------|------|
| 63.5 | 38.1 | 43.5 | 28.0 | 14.0 |
| 76.2 | 44.5 | 50.0 | 31.5 | 14.0 |
| 89   | 50.8 | 56.5 | 31.5 | 16.0 |

<Screw specifications>

Plus hexagon-headed screw : M5×0.8×10

Maximum screw tightening torque : 3.23Nm

\* The screw and the mounting clamp are separately supplied and not attached to the product.

### PART NUMBERING SYSTEM

## ◆RATED RIPPLE CURRENT MULTIPLIERS

## ●Frequency Multipliers

| Frequency (Hz) | 50  | 120 | 300 | 1k  | 3k  |
|----------------|-----|-----|-----|-----|-----|
| Coefficient    | 0.8 | 1.0 | 1.1 | 1.3 | 1.4 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

Also, for the RWR series capacitors, using them at operating voltage less than their rated voltage can extend their lifetime. For details, please contact a representative of Nippon Chemi-Con.

## ◆USEFUL LIFE

Useful life depending on the ambient temperature  $T_x$  under ripple current operating conditions

## ◆Warning !

Useful life shall indicate the end of the life time without exceeding the specified failure rate. It's generally known that Aluminum Electrolytic Capacitors have wear-out failure mode with gradual deterioration of the electrical parameters and should have large number of the failure rate at the end of life. The useful life time is specified by a certain failure rate.  
 It's not a guaranteed specification.

Generally the maximum life time is 15 years (131,000hours) considering sealing material deteriorate. When a longer life time is required for your application, please consult us.

## RWQ Series

- Downsized and high ripple current from RWE series
- Endurance with ripple current : 2,000 hours at 85°C
- RoHS2 Compliant

RWQ

Downsized

## ◆RATED RIPPLE CURRENT MULTIPLIERS

### ●Frequency Multipliers

| Frequency (Hz) | 50  | 120 | 300 | 1k  | 3k  |
|----------------|-----|-----|-----|-----|-----|
| Coefficient    | 0.8 | 1.0 | 1.1 | 1.3 | 1.4 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

Also, for the RWQ series capacitors, using them at operating voltage less than their rated voltage can extend their lifetime. For the details, please contact a representative of Nippon Chemi-Con.

# RWE Series

- Endurance with ripple current : 85°C 2,000 hours
- RoHS2 Compliant

## SPECIFICATIONS

## DIMENSIONS (Screw-Mount) [mm]

●Terminal Code : LG

φ35 to φ63.5 : G=6  
φ76.2 & φ89 : G=5

●Mounting Clamp Code : B

| φD   | A     | B    | W    | H   | F    |
|------|-------|------|------|-----|------|
| 35   | 58.0  | 44.0 | 48.0 | 3.5 | 12.7 |
| 50   | 78.0  | 64.0 | 68.0 | 4.5 | 22.4 |
| 63.5 | 90.0  | 76.0 | 80.0 | 4.5 | 28.0 |
| 76.2 | 104.5 | 90.0 | 93.5 | 4.5 | 31.5 |

●Mounting Clamp Code : C

| φD   | E    | K    | F    | J    |
|------|------|------|------|------|
| 50   | 32.5 | 37.0 | 22.4 | 14.0 |
| 63.5 | 38.1 | 43.5 | 28.0 | 14.0 |
| 76.2 | 44.5 | 50.0 | 31.5 | 14.0 |
| 89   | 50.8 | 56.5 | 31.5 | 16.0 |

<Screw specifications>

Plus hexagon-headed screw :M5×0.8×10

Maximum screw tightening torque :3.23Nm

\* The screw and the mounting clamp are separately supplied and not attached to the product.

## ◆RATED RIPPLE CURRENT MULTIPLIERS

### ● Frequency Multipliers

| Frequency (Hz) | 50  | 120 | 300 | 1k  | 3k  |
|----------------|-----|-----|-----|-----|-----|
| Coefficient    | 0.8 | 1.0 | 1.1 | 1.3 | 1.4 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

Also, for the RWE series capacitors, using them at operating voltage less than their rated voltage can extend their lifetime. For details, please contact a representative of Nippon Chemi-Con.

## RWL Series

- High ripple capability
- For train systems and high power consuming inverter circuits
- Endurance with ripple current : 20,000 hours at 85°C
- RoHS2 Compliant

RWL

Longer life

RWF

## ◆ SPECIFICATIONS

## ◆ DIMENSIONS (Screw-Mount) [mm]

● Terminal Code : LG

φ63.5 : G=6

φ76.2 &amp; φ89 : G=5

&lt;Screw specifications&gt;

Plus hexagon-headed screw : M5×0.8×10

Maximum screw tightening torque : 3.23Nm

\* The screw and the mounting clamp are separately supplied and not attached to the product.

● Mounting Clamp Code : B

| φD   | A     | B    | W    | F    |
|------|-------|------|------|------|
| 63.5 | 90.0  | 76.0 | 80.0 | 28.0 |
| 76.2 | 104.5 | 90.0 | 93.5 | 31.5 |

● Mounting Clamp Code : C

| φD   | E    | K    | F    | J    |
|------|------|------|------|------|
| 63.5 | 38.1 | 43.5 | 28.0 | 14.0 |
| 76.2 | 44.5 | 50.0 | 31.5 | 14.0 |
| 89   | 50.8 | 56.5 | 31.5 | 16.0 |

## ◆RATED RIPPLE CURRENT MULTIPLIERS

## ●Frequency Multipliers

| Frequency (Hz) | 50  | 120 | 300 | 1k  | 3k  |
|----------------|-----|-----|-----|-----|-----|
| Coefficient    | 0.8 | 1.0 | 1.1 | 1.3 | 1.4 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

Also, for RWL series capacitors, using them at operating voltage less than their rated voltage can extend their lifetime. For details, please contact a representative of Nippon Chemi-Con.

# RHB Series

- Realized higher voltage than RWE series. (575 to 700V<sub>dc</sub>)
- Endurance with ripple current : 2,000 hours at 85°C
- Suitable for X-ray and welder power supply where high energy is required
- RoHS2 Compliant

## SPECIFICATIONS

| Items                           | Characteristics                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                    |                             |              |                                       |                 |                               |

## DIMENSIONS (Screw-Mount) [mm]

● Terminal Code : LG

φ 63.5 : G=6

φ 76.2 & φ 89 : G=5

● Mounting Clamp Code : B

| φD   | A     | B    | W    | F    |
|------|-------|------|------|------|
| 63.5 | 90.0  | 76.0 | 80.0 | 28.0 |
| 76.2 | 104.5 | 90.0 | 93.5 | 31.5 |

● Mounting Clamp Code : C

| φD   | E    | K    | F    | J    |
|------|------|------|------|------|
| 63.5 | 38.1 | 43.5 | 28.0 | 14.0 |
| 76.2 | 44.5 | 50.0 | 31.5 | 14.0 |
| 89   | 50.8 | 56.5 | 31.5 | 16.0 |

<Screw specifications>

to φ89 Plus hexagon-headed screw : M5×0.8×10

Maximum screw tightening torque : 3.23Nm

\* The screw and the mounting clamp are separately supplied and not attached to the product.

## PART NUMBERING SYSTEM

### ◆RATED RIPPLE CURRENT MULTIPLIERS

●Frequency Multipliers

| Frequency (Hz) | 50  | 120 | 300 | 1k  | 3k  |
|----------------|-----|-----|-----|-----|-----|
| Coefficient    | 0.8 | 1.0 | 1.2 | 1.3 | 1.4 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

Also, for the RHB series capacitors, using them at operating voltage less than their rated voltage can extend their lifetime. For details, please contact a representative of Nippon Chemi-Con.

# RHASeries

- Realized higher voltage than RWF series (500 to 650V<sub>dc</sub>)
- Endurance with ripple current : 5,000 hours at 85°C
- Suitable for high voltage inverter
- RoHS2 compliant

## DIMENSIONS (Screw-Mount) [mm]

● Terminal Code : LG

φ50 & φ63.5 : G=6  
φ76.2 & φ89 : G=5  
φ100 : G=10

<Screw specifications>

to φ89 Plus hexagon-headed screw : M5×0.8×10  
Maximum screw tightening torque : 3.23Nm

● Mounting Clamp Code : B

| φD   | A     | B    | W    | F    |
|------|-------|------|------|------|
| 50   | 78.0  | 64.0 | 68.0 | 22.4 |
| 63.5 | 90.0  | 76.0 | 80.0 | 28.0 |
| 76.2 | 104.5 | 90.0 | 93.5 | 31.5 |

● Mounting Clamp Code : C

| φD   | E    | K    | M   | F    | J    |
|------|------|------|-----|------|------|
| 50   | 32.5 | 37.0 | 4.5 | 22.4 | 14.0 |
| 63.5 | 38.1 | 43.5 | 4.5 | 28.0 | 14.0 |
| 76.2 | 44.5 | 50.0 | 4.5 | 31.5 | 14.0 |
| 89   | 50.8 | 56.5 | 4.5 | 31.5 | 16.0 |
| 100  | 56.5 | 63.4 | 5.5 | 41.5 | 18.0 |

φ100 Cross-recessed head (Phillips) screw : M8×1.25×16  
Spring washer, Washer  
Maximum screw tightening torque : 6.31Nm

\* The screw and the mounting clamp are separately supplied and not attached to the product.

### ◆RATED RIPPLE CURRENT MULTIPLIERS

#### ● Frequency Multipliers

| Frequency (Hz) | 50  | 120 | 300 | 1k  | 3k  |
|----------------|-----|-----|-----|-----|-----|
| Coefficient    | 0.8 | 1.0 | 1.2 | 1.3 | 1.4 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

Also, for the RHA series capacitors, using them at operating voltage less than their rated voltage can extend their lifetime. For details, please contact a representative of Nippon Chemi-Con.

## LXA Series

- Rated voltage range up to 525V<sub>dc</sub>
- Endurance with ripple current : 5,000 hours at 105°C (2,000 hours for 500V<sub>dc</sub> & 525V<sub>dc</sub>)
- RoHS2 Compliant

LXA

Long life  
KMH

## ◆SPECIFICATIONS

## LXA Series

### ◆RATED RIPPLE CURRENT MULTIPLIERS

#### ● Frequency Multipliers

| Frequency (Hz)            | 50   | 120  | 300  | 1k   | 3k   | 10k  | 50k  |
|---------------------------|------|------|------|------|------|------|------|
| 10 to 50V <sub>dc</sub>   | 0.95 | 1.00 | 1.03 | 1.05 | —    | 1.09 | 1.12 |
| 63 to 80V <sub>dc</sub>   | 0.90 | 1.00 | 1.06 | 1.10 | —    | 1.18 | 1.22 |
| 100 to 250V <sub>dc</sub> | 0.80 | 1.00 | 1.12 | 1.22 | —    | 1.30 | 1.33 |
| 350 to 525V <sub>dc</sub> | 0.80 | 1.00 | 1.20 | 1.50 | 1.60 | —    | —    |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

Also, for the LXA series capacitors (350 to 525V<sub>dc</sub> products), using them at operating voltage can extend their lifetime. For details, please contact a representative of Nippon Chemi-con.

## LXR Series

- Higher ripple capability than LXA series
- Endurance with ripple current : 5,000 hours at 105°C
- RoHS2 Compliant

LXR

Higher ripple  
LXA

## ◆ SPECIFICATIONS

## ◆ DIMENSIONS (Screw-Mount) [mm]

● Terminal Code : LG

φ63.5 & φ76.2 : G=6  
 φ89 : G=4  
 φ100 : G=10

&lt;Screw specifications&gt;

to φ89 Plus hexagon-headed screw : M5×0.8×10  
 Maximum screw tightening torque : 3.23Nm

● Mounting Clamp Code : B

| φD   | A     | B  | W    | F    |
|------|-------|----|------|------|
| 63.5 | 90    | 76 | 80   | 28.0 |
| 76.2 | 104.5 | 90 | 93.5 | 31.5 |

● Mounting Clamp Code : C

| φD   | E    | K    | M   | F    | J    |
|------|------|------|-----|------|------|
| 63.5 | 38.1 | 43.5 | 4.5 | 28.0 | 14.0 |
| 76.2 | 44.5 | 50.0 | 4.5 | 31.5 | 14.0 |
| 89   | 50.8 | 56.5 | 4.5 | 31.5 | 16.0 |
| 100  | 56.5 | 63.4 | 5.5 | 41.5 | 18.0 |

φ100 Cross-recessed head (Phillips) screw : M8×1.25×16  
 Spring washer, Washer  
 Maximum screw tightening torque : 6.31Nm

\* The screw and the mounting clamp are separately supplied and not attached to the product.

## ◆RATED RIPPLE CURRENT MULTIPLIERS

## ●Frequency Multipliers

| Frequency (Hz) | 120 | 300 | 1k  | 3k  |
|----------------|-----|-----|-----|-----|
| Coefficient    | 1.0 | 1.1 | 1.3 | 1.4 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

Also, for the LXR series capacitors, using them at operating voltage less than their rated voltage can extend their lifetime. For details, please contact a representative of Nippon Chemi-Con.

# RWV Series

- For frequently change of regenerative voltage from AC servo amplifier and inverter control
- Improved the resistance for charge and discharge from same dimension of RWF series
- Endurance with ripple current : 5,000 hours at 85°C
- Rated voltage range : 350 to 450V<sub>dc</sub>, Capacitance 820 to 18,000μF
- RoHS2 Compliant

## SPECIFICATIONS

## DIMENSIONS (Screw-Mount) [mm]

●Terminal Code : LG

φ50 & φ63.5 : G=6  
φ76.2 & φ89 : G=5

●Mounting Clamp Code : B

| φD   | A     | B    | W    | F    |
|------|-------|------|------|------|
| 50   | 78.0  | 64.0 | 68.0 | 22.4 |
| 63.5 | 90.0  | 76.0 | 80.0 | 28.0 |
| 76.2 | 104.5 | 90.0 | 93.5 | 31.5 |

●Mounting Clamp Code : C

| φD   | E    | K    | F    | J    |
|------|------|------|------|------|
| 50   | 32.5 | 37.0 | 22.4 | 14.0 |
| 63.5 | 38.1 | 43.5 | 28.0 | 14.0 |
| 76.2 | 44.5 | 50.0 | 31.5 | 14.0 |
| 89   | 50.8 | 56.5 | 31.5 | 16.0 |

<Screw specifications>

Plus hexagon-headed screw : M5×0.8×10

Maximum screw tightening torque : 3.23Nm

\* The screw and the mounting clamp are separately supplied and not attached to the product.

RWV Series

## RWV Series

### ◆ RATED RIPPLE CURRENT MULTIPLIERS

#### ● Frequency Multipliers

| Frequency (Hz) | 50  | 120 | 300 | 1k  | 3k  |
|----------------|-----|-----|-----|-----|-----|
| Coefficient    | 0.8 | 1.0 | 1.1 | 1.3 | 1.4 |

The deterioration of aluminum electrolytic capacitors accelerates their life due to the internal heating produced by ripple current. For details, refer to Section "5-3 Ripple Current Effect on Lifetime" in the catalog, Technical Note.

Also, for the RWV series capacitors, using them at operating voltage less than their rated voltage can extend their lifetime. For the details, please contact a representative of Nippon Chemi-Con.

# U37F Series

- Large Can
- Screw Terminals
- General Purpose U37 Grade
- High Ripple
- 350 to 500VDC Ratings
- RoHS Compliant
- 5,000 Hours Lifetime at +85°C
- Up to 150,000 Hours Useful Life

The U37F series is a general purpose, screw mount U37 grade series specifically designed to provide the ripple current capability and long life required for high reliability inverter applications. The U37F has an endurance rating of 5,000 hours at +85°C with the rated ripple current applied. The useful life can exceed 150,000 hours at +40°C and 1.5x the ripple current. These capacitors are available in a variety of high current English or Metric thread terminals. Mounting options include a three-footed clamp or bottom threaded stud. Custom designs are also available.

## Summary of Specifications

- Screw terminals: high and low post, English and Metric thread.
- Capacitance range: 1,500 to 22,000μF.
- Voltage range: 350 to 500VDC.
- Category temperature range: -40°C to +85°C.
- Leakage current: 0.02CV(μA) or 5mA, whichever is smaller, after 5 minutes at +25°C.
- Standard capacitance tolerance: ±20%
- Nominal case size (D×L): D = 50mm (2.000") to 89mm (3.500"); L = 92mm (3.625") to 219mm (8.625").
- Rated lifetime: 5,000 hours at +85°C with rated ripple current applied.

# U37F Series

## U37F Specifications - Screw Terminals

| Item                             | Characteristics                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                    |                      |       |                                                                                                                                                     |      |                      |    |         |    |

Contact appropriate representative with specific requirements.                                                                                                                                                                                                                                                                                                                                |                    |                      |       |                                                                                                                                                     |      |                      |    |         |    |

# U37F Series

## U37F Useful Life

### Useful Life: 6,500 Hours at +85°C

The life expectancy of a capacitor is shown as a function of ambient temperature and ripple current load.

## Diagram of Dimensions - Screw Terminals

### Large Can/Screw Terminals

Unit: mm (inches)

### Case Dimensions and Standard Box Quantities

### Note:

In some cases, the color of the sleeve may change slightly due to the operating conditions, however, the discoloration will not impair capacitor function.

†For terminal, mounting and construction options, refer to the part numbering system for descriptions and codes.

\*Refer to diagram of dimensions for detailed case size specifications.

# U37L Series

- **Large Can**
- **Screw Terminals**
- **General Purpose U37 Grade**
- **High Ripple**
- **350 to 500VDC Ratings**
- **RoHS Compliant**
- **10,000 Hours Lifetime at +85°C**
- **Up to 175,000 Hours Useful Life**

The U37L series is a longer life version of the U37 grade series and is specifically designed to provide the ripple current capability and long life required for high reliability inverter applications. The U37L has an endurance rating of 10,000 hours at +85°C with the rated ripple current applied. The useful life can exceed 175,000 hours at +40°C and 2x the ripple current. These capacitors are available in a variety of high current English or Metric thread terminals. Mounting options include a three-footed clamp or bottom threaded stud. Custom designs are also available.

## Summary of Specifications

- **Screw terminals: high and low post, English and Metric thread.**
- **Capacitance range: 1,500 to 18,000µF.**
- **Voltage range: 350 to 500VDC.**
- **Category temperature range: – 40°C to +85°C.**
- **Leakage current: 0.02CV(µA) or 5mA, whichever is smaller, after 5 minutes at +25°C.**
- **Standard capacitance tolerance: ± 20%**
- **Nominal case size (D × L): D = 50mm (2.000") to 89mm (3.500"); L = 92mm (3.625") to 219mm (8.625").**
- **Rated lifetime: 10,000 hours at +85°C with rated ripple current applied.**

Contact appropriate representative with specific requirements.                                                                                                                                                                                                                                                                                                                                |                    |                      |       |                                                                                                                                                     |      |                      |    |         |    |

# U37L Series

## U37L Useful Life

### Useful Life: 13,000 Hours at +85°C

The life expectancy of a capacitor is shown as a function of ambient temperature and ripple current load.

## Diagram of Dimensions - Screw Terminals

### Large Can/Screw Terminals

Unit: mm (inches)

### Note:

In some cases, the color of the sleeve may change slightly due to the operating conditions, however, the discoloration will not impair capacitor function.

Mounting Hardware is optional. Refer to hardware specifications on the following page.

## U37L Series

### Mounting Hardware - Screw Terminals

#### Type C: Three-Footed Clamp

Unit: mm (inches)

Hardware: Screw, washer and hexagon nut included with each clamp.

#### Type C: Clamp Dimensions

† For terminal, mounting and construction options, refer to the part numbering system for descriptions and codes.

\* Refer to diagram of dimensions for detailed case size specifications.

# U37X Series

- **Large Can**
- **Screw Terminals**
- **General Purpose U37 Grade**
- **High Ripple**
- **350 to 500VDC Ratings**
- **RoHS Compliant**
- **15,000 Hours Lifetime at +85°C**
- **Up to 175,000 Hours Useful Life**

The U37X series is the longest life version of the U37 grade series and is specifically designed to provide the ripple current capability and long life required for high reliability inverter applications. The U37X has an endurance rating of 15,000 hours at +85°C with the rated ripple current applied. The useful life can exceed 175,000 hours at +40°C and 2.1x the ripple current. These capacitors are available in a variety of high current English or Metric thread terminals. Mounting options include a three-footed clamp or bottom threaded stud. Custom designs are also available.

## Summary of Specifications

- **Screw terminals: high and low post, English and Metric thread.**
- **Capacitance range: 1,200 to 18,000µF.**
- **Voltage range: 350 to 500VDC.**
- **Category temperature range: -40°C to +85°C.**
- **Leakage current: 0.02CV(µA) or 5mA, whichever is smaller, after 5 minutes at +25°C.**
- **Standard capacitance tolerance: ±20%**
- **Nominal case size (D×L): D = 50mm (2.000") to 89mm (3.500"); L = 92mm (3.625") to 219mm (8.625").**
- **Rated lifetime: 15,000 hours at +85°C with rated ripple current applied.**

Contact appropriate representative with specific requirements.                                                                                                                                                                                                                                                                                                                                |                    |                      |       |                                                                                                                                                     |      |                      |    |         |    |

## U37X Series

### U37X Useful Life

#### Useful Life: 20,000 Hours at +85°C

The life expectancy of a capacitor is shown as a function of ambient temperature and ripple current load.

### Diagram of Dimensions - Screw Terminals

#### Large Can/Screw Terminals

Unit: mm (inches)

#### Case Dimensions and Standard Box Quantities

#### Note:

In some cases, the color of the sleeve may change slightly due to the operating conditions, however, the discoloration will not impair capacitor function.

#### Type S: Stud Mounting

#### Mounting Nut - Order Separately

The insulated plastic mounting nut is not included with stud mount capacitor orders. It must be ordered separately. See available part numbers below.

#### Type S: Stud Dimensions

| Mounting Code | P<br>±1.0 (0.040) | T<br>Thread Size |
|---------------|-------------------|------------------|
| S             | 16.0 (0.630)      | M12              |

†For terminal, mounting and construction options, refer to the part numbering system for descriptions and codes.

\*Refer to diagram of dimensions for detailed case size specifications.

# UTOR Series

- Large Can Toroidal Design
- Lowest Thermal Resistance
- Optimum Cooling Capability
- New Lower Profile Sizes
- New Heat-Sink Mounting Kit
- RoHS Compliant

The UTOR series now offers higher capacitance and ripple current per case size. The upgrade allows the inverter designer to significantly reduce the size, weight, and cost of the capacitor bank. Toroidal geometry is ideal for cooling by either forced air or by heat-sink with the use of a new mounting kit option. The heat-sink kit option provides optimum thermal transfer while maintaining electrical isolation. These capacitors have an endurance rating of 5,000 hours at 105°C or 20,000 hours at 85°C with the rated ripple current applied. The UTOR series represents the optimum cost per amp of ripple current for a screw terminal mounted electrolytic capacitor.

## Summary of Specifications

- Screw terminals, high ripple Metric thread.
- Capacitance range: 680 to 10,000µF.
- Voltage range: 350 to 500VDC.
- Operating temperature range: -40°C to +105°C.
- Leakage current: 0.02CV(µA) or 5mA, whichever is smaller, after 5 minutes at +25°C.
- Standard capacitance tolerance: ±20%
- Nominal case size (D×L): D = 76mm (3.000"); L = 54mm (2.125") to 168mm (6.625").
- Rated lifetime: 5,000 hours at +105°C with rated ripple current applied.

# UTOR Series

## Diagram of Dimensions - Screw Terminals

### Toroidal Large Can/Screw Terminals

Unit: mm and inches

Note:  
In some cases, the color of the sleeve may change slightly due to the operating conditions, however, the discoloration will not impair capacitor function.

### Terminal Specifications in Millimeters

| Terminal Code | Thread Size | Minimum Thread Depth | J<br>± 0.50 | ØS<br>± 0.25 | ØT<br>± 0.25 |

## Mounting Hardware - Screw Terminals

### Type C: Three-Footed Clamp

Unit: mm (inches)

Hardware: Screw, washer and hexagon nut included with each clamp.

### Type C: Clamp Specifications

†For mounting and construction options, refer to the part numbering system for descriptions and codes.

\*Refer to diagram of dimensions for detailed case size specifications.

## Alchip™-MAR Series

- Suitable for small and low profile product such as the car audio and electronics
- Non solvent resistant type
- RoHS2 Compliant

## ◆ SPECIFICATIONS

Production of the products shown in   is scheduled to be discontinued.

## Alchip™-MAK Series

- Suitable for small and low profile product such as the car audio and electronics
- Non solvent resistant type
- RoHS2 Compliant

## ◆ SPECIFICATIONS

Production of the products shown in   is scheduled to be discontinued.

# AVH Series

- The oxide free copper lead wire and electrolyte on audio purpose are employed
- Non solvent resistant type
- RoHS2 Compliant

# 1. Overview of Aluminum Electrolytic Capacitors

## 1-1 Basic Model of Aluminum Electrolytic Capacitors

Capacitors are passive components. Among the various kinds of capacitors, aluminum electrolytic capacitors offer larger CV product per case size and lower cost than the others. In principles of capacitor, its fundamental model is shown in Fig. 1 and its capacitance (C) is expressed by Equation (1) below:

$$C = 8.854 \times 10^{-12} \frac{\epsilon r S}{d} \text{ (F)} \quad (1)$$

$\epsilon r$  : Dielectric constant

S : Surface area of dielectric (m<sup>2</sup>)

d : Thickness of dielectric (m)

Equation (1) shows that the capacitance (C) increases as the dielectric constant ( $\epsilon r$ ) and/or its surface area (S) increases and/or the dielectric thickness (d) decreases.

An aluminum electrolytic capacitor comprises a dielectric layer of aluminum oxide (Al<sub>2</sub>O<sub>3</sub>), the dielectric constant ( $\epsilon r$ ) of which is 8 to 10. This value is not significantly larger than those of other types of capacitors.

However, by extending the surface area (S) of the aluminum foil electrode by means of etching, and by electrochemically forming a thinner but highly voltage-withstandable layer of oxide layer dielectric, the aluminum electrolytic capacitor can offer a larger CV product per case size than other types of capacitors.

A basic model of aluminum electrolytic capacitor is shown in Fig. 2. An aluminum electrolytic capacitor comprises:

Anode ...Aluminum foil

Dielectric...Electrochemically formed oxide layer (Al<sub>2</sub>O<sub>3</sub>) on the anode

Cathode ...A true cathode is electrolytic solution (electrolyte).

Other component materials include a paper separator that holds electrolyte in place and another aluminum foil that functions as a draw-out electrode coming into contact with the true cathode (electrolyte).

In general, an aluminum electrolytic capacitor is asymmetrical in structure and polarized. The other capacitor type known as a bi-polar (non-polar) comprises the anodic aluminum foils for both electrodes.

## 1-2 Structure of Aluminum Electrolytic Capacitor

The aluminum electrolytic capacitor has, as shown in Fig. 3, a roll of anode foil, paper separator, cathode foil and electrode terminals (internal and external terminals) with the electrolyte impregnated, which is sealed in an aluminum can case with a sealing material.

The terminal draw-out structure, sealing material and structure differ depending on the type of the capacitor.

Figure 4 shows typical examples.

Fig-1 Basic model of capacitor

$C_A, C_C$  : Capacitance due to anode and cathodes foils  
 $D_A, D_C$  : Diode effects due to oxide layer on anode and cathode foils  
 $L_A, L_C$  : Inductance due to anode and cathode terminals  
 $R$  : Resistance of electrolyte and separator  
 $R_A, R_C$  : Internal resistance of oxide layer on anode and cathode foils

Fig-2 Basic model and equivalent circuit of aluminum electrolytic capacitor

Fig-3 Basic model of element

Fig-4 Construction of Aluminum Electrolytic Capacitors

### 1-3 Features of Capacitor Materials

Aluminum, which is main material in an aluminum electrolytic capacitor, forms an oxide layer ( $\text{Al}_2\text{O}_3$ ) on its surface when the aluminum is set as anode and charged with electricity in electrolyte.

The aluminum foil with an oxide layer formed thereon, as shown in Fig. 5, is capable of rectifying electric current in electrolyte. Such a metal is called a valve metal.

Fig-5 V-I characteristics of aluminum oxide

#### <Anode aluminum foil>

First, the foil material is electromechanically etched in a chloride solution to extend the surface area of the foil.

Secondly, for the foil to form an aluminum oxide layer ( $\text{Al}_2\text{O}_3$ ) as a dielectric, more than the rated voltage is applied to the foil in a solution such as ammonium borate. This dielectric layer is as dense and thin as 1.1 - 1.5 nm/volt and showing a high insulation resistance ( $10^8$  -  $10^9 \Omega/\text{m}$ ).

The thickness of the oxide layer determines the withstand voltage according to their direct proportional relationship. For the etching pits to be shaped to the intended thickness of the oxide layer, the pit patterns have been designed to have efficient surface area extension depending on the intended withstand voltage (see Fig. 6)

#### <Cathode aluminum foil>

An etching process is performed to the cathode aluminum foil as well as the anode foil. However, the formation process for oxide layer is generally not performed. Therefore, the surface of the cathode foil only has an oxide layer ( $\text{Al}_2\text{O}_3$ ) that has spontaneously formed, which gives a withstand voltage of about 0.5 volt.

Fig-6 Cross section of aluminum etched foil (SEM)

#### <Electrolyte>

The electrolyte, an ion-conductive liquid functions as a true cathode coming into contact with the dielectric layer on the surface of the anode foil. The cathode foil serves as a collector electrode to connect the true cathode with the external circuit. Electrolyte is an essential material that controls the performance of the capacitor (temperature characteristics, frequency characteristics, service life, etc.).

#### <Paper separator >

The separator maintains uniform distribution of the electrolyte and keeps the anode-to-cathode foil distance unchanged.

#### <Can case and sealing materials>

An aluminum can case and seal materials mainly consisting of rubber are used for the purpose of keeping airtightness.

### 1-4 Manufacturing Process

#### ① Etching (for extending the surface area)

This etching process serves to extend the surface area of the aluminum foil. This is an AC or DC current-employed electrochemical process for etching the foil surface in a chloride solution.

Etching Model

#### ② Formation (for forming a dielectric)

This is a process for forming a dielectric layer ( $\text{Al}_2\text{O}_3$ ), which is normally performed on the anode aluminum foil.

Forming Model

#### ③ Slitting

This is a process for slitting aluminum foils (both the anode and cathode) and paper separators to the specified product size.

Slitting Model

#### ④ Winding

This is a process for rolling a set of anode and cathode foils into a cylindrical form with a paper separator inserted between them. During this process, an inner terminal (called a tab) is attached to each of the aluminum foils. The roll made at this process is called a capacitor element.

Impregnation

#### ⑤ Impregnation

This is a process for impregnating the element with electrolyte as a true cathode. The electrolyte also functions to repair the dielectric layer.

#### ⑥ Sealing

This process seals the element using the aluminum can case and sealing materials (rubber, rubber-lined cover, etc.) for keeping the case airtight.

#### ⑦ Aging (reforming)

The process of applying voltage to a post-sealed capacitor at high temperature is called "aging". This serves to repair defective dielectrics that have been made on the foil during the slitting or winding process.

#### ⑧ 100% inspection and packaging

After the aging, all products shall undergo testing for checking their electrical characteristics with chip termination, lead reforming, taping etc. finished, and then be packaged.

#### ⑨ Outgoing inspections

Outgoing inspections are performed as per standard inspection procedures.

#### ⑩ Shipment

## 2. Basic Performance

### 2-1 Basic Electrical Characteristics

#### 2-1-1 Capacitance

The larger the surface area of an electrode is, the higher the capacitance (capacity for storing electricity) is. For aluminum electrolytic capacitors, the capacitance is measured under the standard measuring conditions of 20°C and a 120Hz AC signal of about 0.5V. Generally, as the temperature rises, the capacitance increases; as the temperature decreases, the capacitance decreases (Fig. 7). With a higher frequency, the capacitance is smaller; with a lower frequency, the capacitance is larger (Fig. 8).

#### 2-1-2 $\tan \delta$ (also called tangent of loss angle or dissipation factor)

(Fig. 9) is a simplified model of the equivalent circuit shown in (Fig. 2). For an ideal capacitor with an equivalent series resistance of  $R = 0$ , the  $\tan \delta$  shown in (Fig. 10) is zero. For an aluminum electrolytic capacitor, the equivalent series resistance ( $R$ ) is not zero due to the presence of resistance of the electrolyte and paper separator and other contact resistances.  $1/\omega C$  and  $R$  are correlated as shown in (Fig. 10) and Equation (2).

Fig-9 Simplified equivalent circuit

Fig-10 Dissipation Factor ( $\tan \delta$ )

$$\tan \delta = \frac{R}{1/\omega C} = \omega CR \quad \dots\dots\dots (2)$$

$$\omega : 2\pi f$$

$$\pi = \text{Circular constant, } f : \text{Frequency (} f = 120\text{Hz)}$$

#### 2-1-3 Leakage Current (LC)

As a feature of an aluminum electrolytic capacitor, when DC voltage is applied to it, the oxide layer that acts as a dielectric in the electrolyte allows a small amount of electric current to flow in it. The small amount of current is called a leakage current (LC). An ideal capacitor does not allow the leakage current to flow (this is not the case for charging current).

The leakage current (LC) changes with time as shown in (Fig. 12). Note that LC, decreasing with time, will reach a steady-state value. Therefore, the specifications of LC are defined as a value measured several minutes after the beginning of the application of the rated voltage at 20°C. As the temperature rises, the LC increases; as the temperature decreases, the LC decreases (Fig.13). As the applied voltage decreases, the LC decreases.

Fig-7 Temperature Characteristics of Capacitance

Fig-8 Frequency Characteristics of Capacitance

Fig-11 Temperature Characteristics of  $\tan \delta$

Fig-12 Leakage Current vs. Time

Fig-13 Temperature Characteristics of Leakage Current

## 2-2 Frequency Characteristics of Impedance

When a capacitor is applied with a voltage with the frequency changed, the impedance (Z), a factor of preventing the AC current changes as shown in (Fig. 14). This is the impedance-frequency characteristics of the capacitor.

(Fig. 9) is a simplified model of an equivalent circuit of an aluminum electrolyte capacitor. (Fig. 14) shows dotted lines representing a breakdown of the impedance-frequency characteristic curve into components (C, R and L). As can be seen in this figure, the impedance-frequency characteristics are a composition of C, R and L frequency characteristics.

The value  $1/\omega C$  shows the pure capacitive reactance graphically presented by a straight line going downward at an angle of  $45^\circ$ , and  $\omega L$  shows the pure inductive reactance graphically presented by a straight line going upward at  $45^\circ$ . R shows the equivalent series resistance (ESR). At a range of lower frequencies, the R curve goes downward due to the dielectric loss frequency-dependence. At a range of higher frequencies, the R curve tends to be almost flat since resistance of electrolyte and paper separator is dominant and independent on frequency. Equation (3) shows this tendency.

$$Z = \sqrt{R^2 + \left( \omega L - \frac{1}{\omega C} \right)^2} \dots\dots\dots (3)$$

Because the impedance characteristics of an aluminum electrolyte capacitor depend on resistance of the electrolyte and paper separator, the Z value at the self-resonant frequency tends to be relatively higher, as shown by the solid line in (Fig. 15). The resistance of the electrolyte varies depending on temperature: as the temperature rises, the impedance decreases; and as the temperature decreases, the impedance increases, as shown in (Fig. 16).

Fig-14 Factor of Impedance Frequency

Fig-15 Frequency Characteristics of each Capacitors Impedance

Fig-16 Temperature and Frequency Characteristics of Impedance · ESR

### 3. Reliability

For designing the device with aluminum electrolytic capacitors, a failure rate and useful life are necessary to be considered for their reliability. The failure rate of aluminum electrolytic capacitors is approximated by the bathtub curve shown in (Fig.17).

Fig-17 Bathtub curve

#### (a) Early failure period

At the comparatively early periods of use, devices/components fail by deficiencies in design or manufacturing process or incompatibility with operation conditions. For aluminum electrolytic capacitors, these defectives are removed by debugging at one of manufacturing processes before shipments.

#### (b) Random failure period

Failure is stable low in occurrence and appears unrelated to their served term. Aluminum electrolytic capacitors are low in catastrophic failures in this period compared with semi-conductors and solid tantalum capacitors.

#### (c) Wear-out failure period

In this period, the failure rate increases with the served time. For aluminum electrolytic capacitors, since they were completed in manufacturing, the electrolyte impregnated has gradually evaporated and diffused out of the capacitors through the rubber seal materials with time, which leads to decrease in the capacitance and/or increase  $\tan\delta$ . When any of these values changes beyond the allowable range of specifications, the capacitors are defined as "fell into the wear-out failure". The served term until the capacitors fall into the wear-out failure period is called a useful life.

Aluminum electrolytic capacitors have two categories of failures: catastrophic failure and wear-out failure.

#### <Catastrophic failure>

This is a failure mode that completely destroys the function of the capacitor such as short circuit and open circuit failure.

#### <Wear-out failure>

This is a failure mode where the electrical parameters of the capacitor gradually deteriorate and fail. The criteria for determining if this failure has occurred depend on the purpose of a device. For each series of capacitors, the following electrical parameters have been defined as criteria in the specifications of Endurance in the catalogs or product specifications:

- Change in capacitance
- $\tan\delta$
- Leakage current

Failure rates are often measured in units of % per 1000 hours ( $10^{-5}/\text{hour}$ ). For higher reliability devices designed with a smaller failure rate, units of Failure In Time (FIT) ( $10^{-9}/\text{hour}$ ) is used.

Aluminum electrolytic capacitors are considered as components of wear-out failure mode, the electrical characteristics of which gradually deteriorate and their failure rate increases with time. In general, the failure rate in FIT is determined by total component-hours (product of the number of tested components and test hours).

Due to the definition of FIT, the same FIT rate can be calculated in both cases of testing on the large number of tested components and also testing for long test periods of time. However, these cases mean differently for aluminum electrolytic capacitors. Using the failure rate is not suited to express the reliability of aluminum electrolytic capacitors, but the electrical characteristics based lifetime in hour should be considered to express the reliability.

Also, there are MTBF (Mean Time Between Failures) and MTTF (Mean Time To Failure) to express reliability. The latter is applicable for aluminum electrolytic capacitors because they are categorized into a group of non-repairable systems, equipment and devices for which MTTF is applicable.

### 4. Failure Modes

Failure modes depend on the application conditions that lead to fail. (Fig. 18).

Fig-18 Failure Modes

## 5. Lifetime of Aluminum Electrolytic Capacitors

The lifetime of aluminum electrolytic capacitors is largely dependent on the application conditions. Environmental factors include temperature, humidity, atmospheric pressure and vibrations. Electrical factors include operating voltage, ripple current and charge-discharge. Where the capacitors are used in a normal filtering circuit, ambient temperature and heating due to the ripple current are crucial factors for determining the lifetime of the capacitors. These factors are included to the lifetime specifications titled "Endurance" on the catalogs or product specifications.

For applications subject to high humidity and/or continuous vibrations, or subject to frequent charge and discharge operations, the endurance of individual conditions should be considered.

### 5-1 Ambient Temperature Effect on Lifetime

The lifetime of aluminum electrolytic capacitors is affected mainly by the loss of electrolyte as the result of diffusion through the rubber seal materials, which leads to a decrease in capacitance and increase in  $\tan\delta$ .

The relationship of temperature to the diffusion of electrolyte follows the Arrhenius' Law (Equations (4) and (5)):

$$k = Ae^{\frac{-E}{RT}} \quad \dots\dots\dots (4)$$

$$\ln k = \left( \frac{-E}{RT} \right) + \ln A \quad \dots\dots\dots (5)$$

$k$  : Reaction rate constant

$A$  : Frequency factor

$E$  : Activation energy

$R$  : Gas constant (8.31J/deg)

$T$  : Absolute temperature (K)

Applying Equation (5) to the lifetime of the capacitors brings Equation (6), which is converted to Equation (7):

$$\log \left( \frac{L_x}{L_o} \right) = \frac{E}{2.303R} \left( \frac{1}{T_x} - \frac{1}{T_o} \right) \quad \dots\dots\dots (6)$$

$$\log L_x = \frac{E}{2.303R} \left( \frac{1}{T_x} - \frac{1}{T_o} \right) + \log L_o \quad \dots\dots\dots (7)$$

Practical estimation of the lifetime has been using Equation (8) as an approximation:

$$L_x = L_o \cdot Bt^{(T_o - T_x)/10} \quad \dots\dots\dots (8)$$

$L_o$  : Specified lifetime (hour) with the rated voltage applied (or the rated ripple current superimposed to a DC voltage) at the upper limit of the category temperature. Refer to the lifetime specifications of individual products.

$L_x$  : Estimated life on actual usage (hour)

$T_o$  : Maximum Category Temperature (°C)

$T_x$  : Actual Ambient Temperature (°C)

$Bt$  : Temperature acceleration factor

Where, the temperature acceleration factor (BT) is approximately 2 over an ambient temperature range from 60°C to 95°C, which means that the lifetime is approximately halved for every 10°C rise in ambient temperature. However, according to the Arrhenius Equation (6), the reciprocal of  $T$  is directly proportional to the logarithm of lifetime, which means that, strictly speaking, there is the temperature range where the theory of lifetime reducing by half at every 10°C rise is not applied. (Fig. 19).

Especially for capacitors whose maximum operating temperature is a 105°C or higher, the temperature acceleration factor (BT) needs to be modified depending on temperature ranges of the lifetime estimation.

For details, please consult us.

For lifetime estimation at a lower-temperature range, evaluation test data have not been obtained, and for evaluating long term endurance, it is necessary to take into account some additional factors such as deterioration of the rubber seal materials as well as the diffusion of electrolyte. Accordingly, in Equation (8),  $T_x$  should be 40°C at the lowest for the lifetime calculation purpose, and also the estimated lifetime ( $L_x$ ) should be 15 years at the longest.

Fig-19 Estimated result by Law of 10°C 2 times and Law of Arrhenius

### 5-2 Applying Voltage Effect on Lifetime

Where a capacitor is used at lower than the rated voltage, the lifetime may not be adversely affected, which means that the effect of the applying voltage is negligibly small, while the effect of the ambient temperature and heat generation due to ripple current is significant.

(Fig-20)

Fig-20 Endurance (measured by each apply voltage, result curves are overlapped)  
Note: Due to the very small effect of the applying voltages, the plots cannot be distinguished from one another.

However, for capacitors of larger size and higher rated voltage contain a larger volume of electrolyte, difference in applying voltages can affect degradation of the oxide layer, other than the diffusion of electrolyte.

Therefore, with the exception of certain items, for board-mount products with a rated voltage of 160Vdc or higher, and screw mount terminal-type products with a rated voltage of 350Vdc or higher, the product lifespan estimation includes the effect of applying a lower voltage than the rated voltage (derating voltage).

### 5-3 Ripple Current Effect on Lifetime

Since an aluminum electrolytic capacitor has a larger  $\tan\delta$  than other types of capacitors, the capacitor produces more internal heat when a ripple current flows through it. The temperature rise due to this heat may significantly affect the lifetime of the capacitor. This is the reason why ripple current ratings are specified for capacitors.

#### 5-3-1 Heat Generation due to Ripple Current

Power consumption by the ripple current can be expressed as follows:

$$W = I_R^2 R + V_{IL} \dots\dots\dots (9)$$

W : Internal power dissipation

$I_R$  : Ripple Current

R : Internal Resistance (Equivalent Series Resistance)

V : Applied voltage

$I_L$  : Leakage Current

Leakage current  $I_L$  at the maximum operating temperature can be 5 to 10 times higher than the values measured at 20°C. However, considering  $I_R \gg I_L$ , the above equation can be simplified as Equation (10).

$$W \approx I_R^2 R \dots\dots\dots (10)$$

To obtain the temperature at which equilibrium is achieved between heat generation and dissipation, derive Equation (11).

$$I_R^2 R = \beta A \Delta T \dots\dots\dots (11)$$

$\beta$  : Radiation Constant

A : Surface area of can case ( $m^2$ )

$\Delta T$  : Temperature-rise due to the Ripple Current(°C)

$$A = \frac{\pi}{4} D (D + 4L)$$

D : Can Diameter (m)

L : Can Length (m)

From the above equation, the internal temperature rise ( $\Delta T$ ) is given by Equation (12):

$$\Delta T = \frac{I_R^2 R}{\beta A} \dots\dots\dots (12)$$

Also, for a ripple frequency of 120Hz, Equation (12) for calculating  $\Delta T$  is rewritten as Equation (13):

$$\Delta T = \frac{I_R^2 R}{\beta A} = \frac{I_R^2 \tan \delta}{\beta A \omega C} \dots\dots\dots (13)$$

$$\text{Where } R = \frac{\tan \delta}{\omega C}$$

$\tan \delta$  : Dissipation Factor at 120Hz

$\omega$  :  $2\pi f$  ( $f = 120\text{Hz}$ )

C : Capacitance at 120Hz(F)

An approximate value of ripple current-caused  $\Delta T$  can be calculated using Equation (14):

$$\Delta T = (I_x/I_o)^2 \times \Delta T_o \dots\dots\dots (14)$$

$I_o$  : Rated ripple current (Arms), frequency compensated, at the upper limit of the category temperature range

$I_x$  : Operating ripple current (Arms) actually flowing in the capacitor

$\Delta T_o$  : Rise in internal temperature due to the rated ripple current (°C): different for each product series. Please consult us.

There are some product families that can accept a higher ripple current than the rated value providing that ambient temperature  $T_x$  is lower than the upper limit of the category temperature range. However, in this case, remember that the lifetime decreases due to the higher  $\Delta T$  due to the ripple current. Be sure that  $\Delta T$  does not exceed the specified limit that has been determined as a function of ambient temperature. Note that the core temperature limit of the element is shown by  $[T_x + \Delta T \text{ limit}]$ .

Examples of  $\Delta T$  limits at some ambient temperatures are shown below.

|                           |                    |       |
|---------------------------|--------------------|-------|
| Ambient Temp $T_x$        | 85°C less or equal | 105°C |
| Limit value of $\Delta T$ | 15°C               | 5°C   |

Each product family has a different  $\Delta T$  limit. For details, consult us.

#### 5-3-2 Ripple Current and Frequency

The ripple current rating is specified normally by the effective value (r.m.s value) of 120Hz or 100kHz sine wave. However, since the equivalent series resistance

(ESR) of a capacitor is frequency-dependent, the allowable ripple current depends on the frequency. Where the operating ripple current consists of a mains power frequency element and switching frequency element(s) like switching mode power supplies do, the internal power loss is expressed by Equation (15):

$$W = I_{r1}^2 R_{r1} + I_{r2}^2 R_{r2} + \dots\dots I_{rn}^2 R_{rn} \dots\dots\dots (15)$$

W : Power consumption

$I_{r1}, I_{r2}, \dots, I_{rn}$  : Ripple current (Arms) at frequency  $f_1 \dots f_n$

$R_{r1}, R_{r2}, \dots, R_{rn}$  : ESR ( $\Omega$ ) at  $f_1 \dots f_n$

Given a frequency compensation factor (Frequency Multiplier) =  $F_n$  and reference frequency for the ripple current =  $f_o$ ,  $R_n = R_o/F_n^2$  is obtained. Therefore, the ripple current at any frequency can be converted into its r.m.s. value at the reference frequency ( $I_{fo}$ ) using Equation (16):

$$I_{fo} = \sqrt{(I_{r1}/F_{r1})^2 + (I_{r2}/F_{r2})^2 + \dots\dots (I_{rn}/F_{rn})^2} \dots\dots\dots (16)$$

$I_{fo}$  : Reference ripple current (Arms), i.e., that at the reference frequency

$F_{r1}, F_{r2}, \dots, F_{rn}$  : Frequency compensation factor (Frequency Multiplier) at frequency  $f_1 \dots f_n$  (Refer to the catalogs)

Note that the ESR depends on the temperature and the value of  $\beta$  depends on the installation conditions of the capacitor on the board. To determine more accurate values of  $\Delta T$ , they can be actually measured using a thermocouple.

#### 5-3-3 Lifetime Estimation

Equations (17) through (19) can be used for estimating the lifetime of a non-solid aluminum electrolytic capacitor based on the ambient temperature, the rise of internal temperature due to ripple current, and operating voltage applied.

For a surface mount type or radial lead type capacitor :

Endurance specifications are defined by the rated voltage.

$$L_x = L_o \times 2^{\frac{T_o - T_x}{10}} \times 2^{\frac{-\Delta T}{5}} \dots\dots\dots (17)$$

For a surface mount type or radial lead type capacitor : Endurance specifications are defined by "the rated ripple current superimposition".

$$L_x = L_r \times 2^{\frac{T_o - T_x}{10}} \times 2^{\frac{\Delta T_o - \Delta T}{5}} \dots\dots\dots (18)$$

For a snap-in type or screw terminal type capacitor

$$L_x = L_r \times 2^{\frac{K(T_o - T_x)}{10}} \times 2^{\frac{\Delta T_o - \Delta T}{5}} \times K_v \dots\dots\dots (19)$$

$L_o$  : Specified lifetime (hour) at the upper limit of the category temperature range and at the rated voltage

$L_r$  : Specified lifetime (hour) at the upper limit of the category temperature range and at the rated ripple current superimposed to a DC voltage

$L_x$  : Estimation of actual lifetime (hour)

$T_o$  : Upper limit of the category temperature range (°C)

$T_x$  : Actual ambient temperature of the capacitor (°C)  
Use 40°C if the actual ambient temperature is below it.

$\Delta T$  : Rise of internal temperature due to actual ripple current (°C)

\* $\Delta T_o$  : Rise of internal temperature due to the rated ripple current (°C)

\*Kt : Correction factor of ambient temperature acceleration factor

\* $K_v$  : Derating voltage factor (a snap-in type capacitor with the rated voltage of less than 160V<sub>dc</sub> and a screw terminal type capacitor with the rated voltage of less than 350V<sub>dc</sub> :1)

\*A : Acceleration factor of temperature-rise due to the ripple current (This factor depends on use conditions.)

For the values marked with \*, consult us.

Please consult us about lifetime equations for the series of the category temperature 125°C or more.

Subject series : MXB, MHS, MVH, MHL, MHB, MHJ, MHK, GPA, GVA, GXF, GXL, GPD, GVD, GQB, GXA, GXM.

Note that the calculation results above are not considered as a guaranteed value. When designing the lifetime of a device, please select a capacitor that has an extra margin against the device lifetime requirements. Also, where the estimation result calculated exceeds 15 years, please consider 15 years to be a maximum. If 15 years or more may be required as an expected lifetime, please consult us.

## 5-4 Charge and Discharge Operation Effect on Lifetime

Applying a voltage to an aluminum electrolytic capacitor makes the electric charges accumulate on the anode foil dielectric. Discharging the electricity through a discharging resistance makes the electric charges move to the cathode foil and cause chemical reactions between the cathode aluminum and electrolyte, thereby forming a dielectric oxide layer.

When this charge and discharge is repeatedly operated, the chemical reactions proceed to further form the oxide layer on the cathode foil, causing the capacitance of the cathode foil to reduce and thereby reducing the capacitance of the capacitor. Moreover, the chemical reactions bring heat and gases. Depending on the charge and discharge conditions, the internal pressure may increase, the pressure relief vent may open or the capacitor may have destructive failures. Consult us for using a capacitor with the following applications:

- Frequently repeating power on/off.
- Repeating rapid charge and discharge operations at a short interval cycle.
- Repeating charge and discharge operations with a large voltage drop.

Fig-21 Charge Condition at Charge

Fig-22 Charge Condition at Discharge  
(Disconnect V1 and Discharged condition)

$$Q = C_A V_2 + C_C V_2$$

$$\text{then } C_A V_1 = C_A V_2 + C_C V_2$$

$$V_2 = \frac{C_A V_1}{C_A + C_C} \quad (20)$$

Figures 23 through 25 show some test data of special-design capacitors for charge and discharge application, compared with general-purpose capacitors.

Fig-23 Rapid charge and discharge characteristics  
(Effects of Frequency)

Fig-24 Rapid charge and discharge characteristics  
(Effects of Applied Voltage)

Fig-25 Rapid charge and discharge characteristics  
(Effects of Ambient Temperature)

## 5-5 Inrush Current

For the power supply inrush current that can occur on the start-up of a power supply or on the charge of a welding machine lasts only milliseconds, but its magnitude may reach 10 to 1,000 times more than the normal current. Usually, a single, non-repeated inrush current produces a negligibly small amount of heat, so it does not matter.

However, frequently repeating inrush currents may heat up the element inside a capacitor more than the allowable limit and/or overheat the external terminal connections or the connections between the internal lead and foil electrode.

## 5-6 Abnormal Voltage Effect on Lifetime

Applying abnormal voltage can increase the internal pressure with heat and gases produced, causing the pressure relief vent to open or the capacitor to have destructive failures.

### 5-6-1 Overvoltage

Applying a voltage higher than the rated voltage will cause chemical reactions (formation of dielectric) to occur on the anode foil with the leakage current rapidly increasing, which produces heat and gases and thereby increases the internal pressure. The reactions are accelerated by the voltage, current density and ambient temperature, causing the pressure relief vent to open or the capacitor to have destructive failures. It may also accompany a reduction in capacitance and an increase in  $\tan \delta$  as well as an increase in the leakage current, which can lead to internal short-circuiting failure. An example of capacitor overvoltage characteristics is shown in Fig. 26.

Fig-26 Applied overvoltage characteristic at 105°C

### 5-6-2 Reverse Voltage

Applying a reverse voltage will cause chemical reactions (formation of dielectric) to occur on the cathode foil, and, as is the case with overvoltage, the leakage current will rapidly increase with heat and gases generating and thus the internal pressure increases. The reactions are accelerated by the voltage, current density and ambient temperature. It may also accompany a reduction in capacitance and an increase in  $\tan \delta$  as well as an increase in the leakage current. An example of capacitor reverse-voltage characteristics is shown in Fig. 27.

A reverse voltage of as small as 1V can cause the capacitance to decrease. A reverse voltage of 2 to 3V can shorten lifetime due to a reduction in capacitance, increase in  $\tan \delta$ , and/or increase in leakage current. A reverse voltage of even higher value can open the pressure relief vent or lead to destructive failures (Fig. 27).

Fig-27 Applied Reverse voltage characteristic at 105°C

### 5-6-3 Do not Use Aluminum Electrolytic Capacitors in an AC Circuit

Using an aluminum electrolytic capacitor in an AC circuit will result in the same situation as that with a positive potential being applied to the cathode (like a reverse voltage) and with an excessively large ripple current flowing in the capacitor, which may increase the internal pressure due to the generation of heat and gases, open the pressure relief vent, leak the electrolyte with the rubber seal bung expelled or cause the capacitor to blow up or catch fire in the worst case. If the capacitor blows up, it may scatter flammable materials such as electrolyte and element-supporting wax materials, which can lead to short-circuiting of the device. Therefore, do not use aluminum electrolytic capacitors in any of the AC circuits.

## 6. Effect of Halogens

Aluminum electrolytic capacitors are sensitive to contamination of halogen ions (especially to chlorine and bromine ions) though the degree of the effect depends on the properties of the electrolyte and/or sealing materials used in the capacitors. For using a halide-containing flux, solvent (cleaning agent, adhesive or coating materials) or fumigant, the halide may penetrate into the capacitor through the rubber seal materials and cause the following corrosion reactions to occur. These reactions can lead to an increase in leakage current, opening of the pressure relief vent, and/or open-circuit failure in the capacitor. The reactions are accelerated as the voltage and/or temperature rises.

[Corrosion reactions]

RX : Halogenated compound

X<sup>-</sup> : Halogen ions (Cl<sup>-</sup>, F<sup>-</sup>, Br<sup>-</sup>)

Halides that penetrated the element inside a capacitor make contact with the electrolyte, by which the halides are hydrolyzed and release halogen ions as shown on Reaction (21). The halogen ions then attack aluminum by anodic half-cell reaction, producing AlX<sub>3</sub> (Reaction 22 and 23).

AlX<sub>3</sub> is then hydrolyzed, which is decomposed to aluminum hydroxide and the halogen ions (Reaction (24)). The halogen ions reproduced are repeatedly used and reproduced by the reactions of (22) ~ (24), and then the corrosion develops endlessly.

Shown below are precautions for use of flux, cleaning agents, adhesive, coating materials and fumigant.

### 6-1 Effect of Flux

Usually flux products contain an activator of ionic halide system, which has been associated with the corrosion issues of capacitors, and nowadays non-ionic halide system type flux products have been increasingly available on the market. Some of the latter flux type have been classified into the so called "non-halogen flux" or "halogen-free flux", and parts of the "non-halogen" or "halogen-free" flux products may contain a large amount of non-ionic halides, which can also adversely affect the capacitors.

### 6-2 Cleaning Agents

Where cleaning the solvent resistance type of aluminum electrolytic capacitors, confirm the following conditions:

- Control the contamination (the conductivity, pH, specific gravity, water content, etc.) of the cleaning agents.
- After the cleaning, do not leave the capacitors (assembly boards) in an environment of cleaning agent-rich or in a closed container. Sufficiently evaporate the residual cleaning agent from the assembly boards and the capacitors by forced hot air at temperatures less than the upper limit of category temperature range for more than 10 minutes.

In general, aluminum electrolytic capacitors are sensitive to contamination of halogen ions (particularly to chlorine ions). Depending on the properties of the electrolyte and rubber seal materials used in a capacitor, the halogen ions lead up to catastrophic failures on the capacitor. Where the inside of a capacitor has been contaminated with more than a certain amount of halogen ions and the capacitor is in use, the corrosion reaction of aluminum occurs. The corrosion causes the capacitor to have a significant increase in leakage cur-

rent with heat produced, open the pressure relief vent and become open circuit mode failure.

Due to global environmental issues (greenhouse effects and other environmental destruction by depletion of the ozone layer), the conventional cleaning solvents of CFC 113, Trichloroethylene and 1,1,1-trichloroethylene were replaced by substitutes.

#### 6-2-1 Alcohol Cleaning Agents

- Fatty-alcohol cleaning agents (New type of solvent)  
 Pine Alpha ST-100S (Arakawa Chemical)  
 Clean Through 750H, 750HS and 750J (Kao)
- IPA (Isopropyl alcohol)

[Compatible capacitor products]

| Terminal Shape     | Subject Series                                  |
|--------------------|-------------------------------------------------|
| Surface Mount Type | All Series                                      |
| Radial Lead Type   | All Series                                      |
| Snap-in Type       | All Series (Less and equal 100V <sub>dc</sub> ) |

[Cleaning conditions]

Either of Immersion or ultrasonic cleaning, for a maximum of 10 minutes at a maximum liquid temperature of 60°C.

[Precautions]

- Make sure that the markings on a capacitor are not rubbed against any other component or the PC board during cleaning. Note that shower cleaning can cause the markings on the capacitor to be washed off.
- Depending on the cleaning method, the markings may be erased or blur.
- A drying process following a water cleaning or rinsing process may cause the outer sleeve materials of a capacitor to swell or shrink.
- After using a weak-alkaline cleaning agent (e.g. Clean Through 750HS, 750J), rinse with water to make sure that no alkaline residue is left on the capacitor.
- Control a flux concentration in a cleaning agent within 2 wt%.
- IPS (Isopropyl Alcohol), if containing xylene or other solvent to improve its cleanability, may swell the rubber seal materials.
- Depending on the type of cleaning agent or conditions, note that the outer sleeve of a capacitor may lose a gloss or whiten in appearance.

#### 6-2-2 HCFC (Freon-225), as Alternative CFCs AK225AES (Asahi Glass)

[Cleaning conditions]

Solvent resistant type capacitors, which were originally developed to intend to resist Freon TE or Freon TES, are also capable of withstanding either of immersion or ultrasonic cleaning, for a maximum of 5 minutes (or 2 minutes for KRE series or 3 minutes for SRM series). However, in view of global environmental issues, HCFCs has not been recommended.

[Compatible capacitor products]

| Terminal Shape     | Subject Series                                                                                                                                                                           |
|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Surface Mount Type | MVE (~63V <sub>dc</sub> ), MZS, MZL, MZR, MZJ, MZA, MVY (6.3 ~ 63V <sub>dc</sub> ), MZF, MZE, MZK, MLA, MLF, MLE, MLK, MVL, MVJ, MHS, MVH (~50V <sub>dc</sub> ), MHL, MHB, MHJ, MXB, MHK |
| Radial Lead Type   | SRG, KRG, KMQ (~100V <sub>dc</sub> ), LZA, LXZ, LXY, LXV, LE, GPA, GVA, GXF, GXL, GPD, GVD, GQB, Lbv, LBG                                                                                |

When a capacitor is mounted closely flush on the PC board, a residual cleaning agent may be left in the gap between the body of the capacitor and PC board surface. Dry out the residue with a forced hot air of 50 to 85°C for 10 minutes or more.

### 6-2-3 Other Solvents

To avoid capacitor failures, do not use the following cleaning agents:

- Halogenated system: causes capacitor failures due to corrosion.
- Alkali system: corrodes (dissolves) the aluminum can case.
- Terpene and petroleum system: deteriorates the rubber seal materials.
- Xylene and toluene: deteriorates the rubber seal materials as well.
- Acetone: erases the markings printed on a capacitor.

### 6-3 Adhesive and Coating Materials

To use adhesives and/or coating materials for aluminum electrolytic capacitors, make sure of the following conditions:

- Do not use any of adhesive or coating materials containing halogenated solvents.
- No flux residue nor stain is left between the rubber seal of a capacitor and PC board.
- Dry the capacitor to remove residual cleaning agents before applying adhesive and coating materials. Do not cover up the entire surface of the rubber seal of the capacitor with adhesive and coating materials.
- Improper heating and/or curing conditions for adhesives and coating materials may cause the sleeve to swell or shrink. Please consult us for proper conditions.
- For a non-solid aluminum electrolytic capacitor, covering up

the entire surface of the rubber seal with resin mold materials will obstruct the normal diffusion of internal hydrogen gas from the capacitor and result in serious failures. Also, where the adhesive and coating materials contain a large amount of halogen ions, the halogen ions will contaminate the inside of the capacitor through the rubber seal materials, which cause the capacitor to become a failure.

- The outer sleeve of a capacitor may lose a gloss or whiten in appearance depending on solvent materials that the adhesive or coating materials contains.
- Some adhesives or coating materials contain organic solvent such as Xylene. Xylene can deteriorate the rubber seal materials, which cause the flux ingredients to penetrate into the capacitor.

### 6-4 Effect of Fumigation

In exporting or importing electronic devices, they may be exposed to fumigation with halide such as methyl bromide. Where aluminum electrolytic capacitors exposed to halide such as methyl bromide, the capacitors will be damaged with the corrosion reaction with the halogen ions.

For the export and import, Nippon Chemi-Con considers using some packaging method and so forth that the fumigation is not required to. For customers to export or import electronic devices, semi-assembly products or capacitor components, confirm if they will be exposed to fumigation and also consider final condition of packaging. (Note that either cardboard or vinyl package has a risk of fumigation gas penetration.)

## 7. Recovery Voltage

Where a capacitor is once charged and discharged with both of the terminals short-circuiting and then left the terminals open for a while, a voltage across the capacitor spontaneously increases again. This is called "recovery voltage phenomenon". The mechanism for this phenomenon can be interpreted as follows:

When charged with a voltage, the dielectric produces some electrical changes within, and then the inside of the dielectric is electrified with the opposite polarities (dielectric polarization). The dielectric polarization occurs in both ways of proceeding rapidly and slowly. When a charged capacitor was discharged until the voltage across the capacitor disappears, and then being left the terminals open, the slow polarization will discharge within the capacitor and appear as recovery voltage. (Fig. 28).

The recovery voltage changes with time as shown in Fig. 29. Its peak will appear 10 to 20 days after the terminals are opened, with gradual weakening thereafter. Larger sized capacitors (screw terminal type and snap-in type) may produce larger recovery voltage.

With a recovery voltage residing in a capacitor, carelessly short-circuiting the terminals can cause sparks to occur, which may scare workers and/or damage low-voltage operating components such as CPU's and memories in the device circuit. To avoid this trouble, discharge the capacitor through 100 - 1kΩ resistors before use. Also, Nippon Chemi-Con may provide some solutions with some packaging method for it. Please consult us.

**Fig-29 Change of Recovery Voltage**

## 8. Storage

Some characteristics of an aluminum electrolytic capacitor are temperature-dependent. The higher the temperature is, the more deteriorated the capacitor will be. An increase in temperature accelerates the increase in leakage current and  $\tan\delta$  and the decrease in capacitance. Leaving a capacitor exposed to high humidity for long hours may lead to discoloration of the lead wires and terminals, and poor solderability. To store aluminum electrolytic capacitors, keep them at normal temperature and humidity without exposure to direct sunlight.

Leaving them exposed to high temperatures (higher than the normal ambient temperature) for long periods of time may lead to chemical reactions between the anode oxide layer and electrolyte, which drop the withstanding voltage and increase leakage current. If this is the case, applying the rated voltage to the capacitor will lead to dielectric breakdown due to the heat produced with the large leakage current, which finally causes the pressure relief vent to open.

Capacitors that have been stored for long periods of time should be subjected to a voltage treatment process (see Note 1) which will reform the dielectric ( $\text{Al}_2\text{O}_3$ ) by electrolyte and return the leakage current to the initial level. Leakage current increase during storage will vary with the withstanding voltage of a capacitor. In general, the higher the rated voltage, the larger increased the leakage current tends to be. Also, since storing for long period of time may shorten the lifetime of the capacitors, consider storage conditions according to the requirements of device life expectancy.

(Note 1) In the voltage treatment process, connecting resistor (around  $1\text{k}\Omega$ ) in series with the capacitor, applied the rated voltage and then be kept the rated voltage for 30 to 60 minutes.

Fig-30 Temperature Characteristics of Storage

## 9. Tips for Selecting Capacitors Appropriate for Individual Applications

Aluminum electrolytic capacitors are used mainly for the filtering application of power supplies. Select appropriate capacitors for the specific requirements of each application, referring to the following examples for typical applications:

### 9-1 Input Filtering Capacitors for Switching Mode Power Supplies

An input filtering capacitor functions to smooth 50-120 Hz waveforms that come from a rectifying circuit, the waveforms of which are superimposed with the ripples with the switching frequency from the switching stage where the capacitor supplies the electric power. Therefore, the capacitor must be capable of managing both ripple currents with each frequency. The ESR of a capacitor is frequency-dependent, so that a ripple current of different frequency produces a different thermal energy in the capacitor.

For PFC power supplies or lighting ballasts, capacitors are subjected to ripple current whose frequency is several dozens of kHz to 100kHz. Therefore, to select capacitors, take their impedance characteristics into consideration.

#### ●Representative output filtering capacitors for SMPS

| Characteristics<br>Type | 85°C     |             | 105°C    |         |             |
|-------------------------|----------|-------------|----------|---------|-------------|
|                         | Standard | Longer Life | Standard | Compact | Longer Life |
| Radial Lead             | —        | —           | KMQ      | PAG     | KXJ         |
| Snap-in                 | SMQ      | SMM         | KMQ      | KMS,KMR | LXS,LXM     |

### 9-2 Output Filtering Capacitors for Switching Mode Power Supplies

In the output filtering, a capacitor must be capable of managing a ripple current with the frequency as high as around 100 kHz. Therefore, Nippon Chemi-Con provides excellent product line-ups with low impedance characteristic at high frequencies, including high temperature and long-life versions, which can be chosen according to the application purpose.

The 125°C maximum temperature series capacitors have a shorter lifetime than the "Long Life" series of 105°C max. temperature though the electrical characteristics are highly stable. The "wide temperature range" series has two subseries that differ by the applicable temperature range: -55 to 105°C and -40 to 125°C. The "Long Life" series capacitors have been designed for specializing lower impedance and also longer lifetime. Compared to the "wide temperature range" series, the Long Life series can serve longer with the lower impedance, though the maximum operating temperature is limited to 105°C and the electrical characteristics are large in change over the temperature range.

#### ●Representative output filtering capacitors for SMPS

| Characteristics<br>Type | 105°C    |       | 125°C     |
|-------------------------|----------|-------|-----------|
|                         | Standard | Low Z | High Temp |
| Wide Temp Range         | LXY      | LZA   | GPA       |
| Longer Life             | KYB      | KZN   | —         |

### 9-3 Filtering Capacitors for Inverter Main Circuits

These capacitors are used in a similar way to those for the input of the switching mode power supplies. Additionally, please understand the following precautions:

For the filtering circuit for 400Vac line, two capacitors of each a rated voltage 350 to 400Vdc can be used with being connected in series. In the series connection, voltages across the individual capacitors during charging depend on their individual capacitance values. After completion of the charging, the voltages come to depend on their leakage current values as the voltage distribution to the individual capacitors inversely corresponds to their leakage current values. For the voltage not to exceed the rated value after the charging is completed, balancing resistors should be connected in parallel with each capacitor. For guidance on choosing balancing resistors, please consult us.

Where capacitors connected in series are frequently charged and discharged, individual charging voltages depend on the variations in their capacitance values. Therefore, keeping the voltage balance will be difficult even if balancing resistors are employed. For servo amplifiers and other application where the voltage fluctuates frequently due to regeneration, use capacitor families that have been especially designed for intensive charge and discharge operations, or consult us for individual designs.

| 4   | 14.0 | 24.0 | 34.0 | 44.0 | 54.0 | 64.0 | 74.0 | 84.0 | 94.0 |
| E   | 14.5 | 24.5 | 34.5 | 44.5 | 54.5 | 64.5 | 74.5 | 84.5 | 94.5 |
| 5   | 15.0 | 25.0 | 35.0 | 45.0 | 55.0 | 65.0 | 75.0 | 85.0 | 95.0 |
| F   | 15.5 | 25.5 | 35.5 | 45.5 | 55.5 | 65.5 | 75.5 | 85.5 | 95.5 |
| 6   | 16.0 | 26.0 | 36.0 | 46.0 | 56.0 | 66.0 | 76.0 | 86.0 | 96.0 |
| G   | 16.5 | 26.5 | 36.5 | 46.5 | 56.5 | 66.5 | 76.5 | 86.5 | 96.5 |
| 7   | 17.0 | 27.0 | 37.0 | 47.0 | 57.0 | 67.0 | 77.0 | 87.0 | 97.0 |
| H   | 17.5 | 27.5 | 37.5 | 47.5 | 57.5 | 67.5 | 77.5 | 87.5 | 97.5 |
| 8   | 18.0 | 28.0 | 38.0 | 48.0 | 58.0 | 68.0 | 78.0 | 88.0 | 98.0 |
| J   | 18.5 | 28.5 | 38.5 | 48.5 | 58.5 | 68.5 | 78.5 | 88.5 | 98.5 |
| 9   | 19.0 | 29.0 | 39.0 | 49.0 | 59.0 | 69.0 | 79.0 | 89.0 | 99.0 |
| K   | 19.5 | 29.5 | 39.5 | 49.5 | 59.5 | 69.5 | 79.5 | 89.5 | 99.5 |

For less than 10μF, a decimal point position is displayed with R.

For 10μF or more, capacitance code is set to the first 2 digits and index (1digit).

Treatment of fraction (Refer to the table)

Example of conversion

| Real cap.  | The first 2 digits | Treatment of fraction | Code |      |      |
|------------|--------------------|-----------------------|------|------|------|
|            |                    |                       | 11th | 12th | 13th |
| 10.0μF →   | 10.0 →             | 10.0 →                | 1    | 0    | 0    |
| 10.1μF →   | 10.1 →             | 10.0 →                | 1    | 0    | 0    |
| 10.2μF →   | 10.2 →             | 10.0 →                | 1    | 0    | 0    |
| 10.3μF →   | 10.3 →             | 10.5 →                | 1    | A    | 0    |
| 10.4μF →   | 10.4 →             | 10.5 →                | 1    | A    | 0    |
| 10.5μF →   | 10.5 →             | 10.5 →                | 1    | A    | 0    |
| 10.6μF →   | 10.6 →             | 10.5 →                | 1    | A    | 0    |
| 10.7μF →   | 10.7 →             | 10.5 →                | 1    | A    | 0    |
| 10.8μF →   | 10.8 →             | 11.0 →                | 1    | 1    | 0    |
| 10.9μF →   | 10.9 →             | 11.0 →                | 1    | 1    | 0    |
| 11.0μF →   | 11.0 →             | 11.0 →                | 1    | 1    | 0    |
| 132μF →    | 13.2 →             | 13.0 →                | 1    | 3    | 1    |
| 133μF →    | 13.3 →             | 13.5 →                | 1    | D    | 1    |
| 167μF →    | 16.7 →             | 16.5 →                | 1    | G    | 1    |
| 168μF →    | 16.8 →             | 17.0 →                | 1    | 7    | 1    |
| 1110μF →   | 11.1 →             | 11.0 →                | 1    | 1    | 2    |
| 1340μF →   | 13.4 →             | 13.5 →                | 1    | D    | 2    |
| 13200μF →  | 13.2 →             | 13.0 →                | 1    | 3    | 3    |
| 13600μF →  | 13.6 →             | 13.5 →                | 1    | D    | 3    |
| 270000μF → | 27.0 →             | 27.0 →                | 2    | 7    | 4    |

## PART NUMBERING SYSTEM

### ◆ Supplement code

Conductive Polymer Aluminum Solid Capacitors (Chip and Radial lead type)

Conductive Polymer Hybrid Aluminum Electrolytic Capacitors (Chip and Radial lead type)

Aluminum Electrolytic Capacitors (Chip type)

|              | Terminal plating material |       |
|--------------|---------------------------|-------|
|              | Sn                        | Sn-Bi |
| Coating case | S                         | G     |

### Aluminum Electrolytic Capacitors (Radial lead and Snap-in type)

|              |              | Terminal plating material |       |
|--------------|--------------|---------------------------|-------|
|              |              | Sn                        | Sn-Bi |
| Outer sleeve | PET          | S                         | D     |
|              | Coating case | H                         | G     |
|              | Polyolefin   | L                         | —     |
|              | PVC          | M                         | —     |

\* Standard design of "environmental friendly" snap-in are not equipped with a plastic disk on the top of the can case.  
We also produce snap-in type with "Plastic disk, PVC sleeve and Sn terminal plating".

### Aluminum Electrolytic Capacitors (Screw mount terminal type)

| Outer sleeve | Supplement code |
|--------------|-----------------|
| PVC          | U               |
| Polyolefin   | S               |
| PET          | C               |

\* For the screw-mount type, the standard design has a plastic disk on the bottom side.

## ELECTRONIC COMPONENTS & DEVICES

### PRODUCTS

|                                                | CAT.No. |
|------------------------------------------------|---------|
| Aluminum Electrolytic Capacitors               | 1001    |
| Multilayer Ceramic Capacitors                  | 1002    |
| Film Capacitors                                | 1003    |
| Metal Oxide Varistors TNR™                     | 1006    |
| Nanocrystalline / Amorphous / Dust Choke Coils | 1008    |
| Electric Double Layer Capacitors               | 1009    |
| Camera Modules                                 |         |

### Notes on Safety

- Always read "Notes on Use" before using the product in order to enable you to use the product correctly and prevent any faults and accidents from occurring.
- Request the Product Specification on the product of NIPPON CHEMI-CON CORPORATION to refer to it as well as this brochure prior to the order of the products. Some specific notes on use of the ordered product may be described in the specifications.
- The products listed in this catalog are designed and manufactured for general electronics equipment use and are not intended for use in applications that can adversely affect human life; where the malfunction of equipment may cause damage to life or property. In addition, our products are not intended to be used in specific applications that may cause a major social impact. Please consult with us in advance of usage of our products in the following listed applications. ① Aerospace equipment ② Power generation equipment such as thermal power, nuclear power etc. ③ Medical equipment ④ Transport equipment (automobiles, trains, ships, etc.) ⑤ Transportation control equipment ⑥ Disaster prevention/crime prevention equipment ⑦ Highly publicized information processing equipment ⑧ Submarine equipment ⑨ Other applications that are not considered general-purpose applications.
- The circuits described as examples in this catalog and the "delivery specifications" are featured in order to show the operations and usage of our products, however, this fact does not guarantee that the circuits are available to function in your equipment systems. We are not in any case responsible for any failures or damage caused by the use of information contained herein. You should examine our products, of which the characteristics are described in the "delivery specifications" and other documents, and determine whether or not our products suit your requirements according to the specifications of your equipment systems. Therefore, you bear final responsibility regarding the use of our products. Please make sure that you take appropriate safety measures such as use of redundant design and malfunction prevention measures in order to prevent fatal accidents and/or fires in the event any of our products malfunction.

### Note

- We strongly recommend our customers to purchase Nippon Chemi-Con products only through our official sales channels. We assume no responsibility for any defects or damages caused by using products purchased from outside our official sales channel or of counterfeit goods. In addition, we will ask the customer to pay the investigation cost for products purchased outside our official sales channel.
- We reserve the right to discontinue production and delivery of products. We do not guarantee that all the products included in this catalog will be available in the future.  
The aforementioned does not apply in the case of individual agreements deviating from the foregoing for customer-specific products
- We continually strive to improve the quality and reliability of our products, but in any case that our product does not meet our published specifications, please stop using it promptly and contact us immediately. As for compensation for non-conforming goods delivered by Chemi-Con, we will limit it only to goods found in non-compliance of our published specifications. This may be accomplished by a no cost replacement of non-conforming individual products, a credit of the piece price paid per each individual non-conforming product, or in other ways deemed necessary.  
In addition, we have an established system with enhanced traceability, therefore we will limit the applicable lot items for any potential compensation.
- The content of this catalog is as of April 2024
