

FORCE-GT

Highlights & Features

- Universal AC input voltage range
- Built-in constant current circuit for charging applications
- Full load operating temperature up to 60°C •
- Cold start at -40°C •
- Ultra-Slim design
- Long life electrolytic capacitor
- Built-in DC OK relay and LED indicator Conformal coating on PCBAs to protect against common dust and pollutants
- Certified with 80 PLUS Platinum for 115 V Industrial

Safety Standards

CB Certified for worldwide use

Model Number: Unit Weight:

DRF-DV480W1GDA 0.88 kg (1.94 lb) Dimensions (H x W x D): 123.6 x 56 x 116.8 mm (4.87 x 2.20 x 4.60 inch)

General Description

The Force-GT Series DIN rail industrial power supply features high power density and high efficiency. The Series offers overcurrent protection in constant current mode, making it suitable for charging applications. Conformal coating is applied on the PCBAs to protect against dust and pollutants often found in harsh industrial environments. The Series' electromagnetic radiated and conducted emissions are compliant with heavy industrial Class B Emission standard and Immunity standard, and complies with environmental protection standards RoHS Directive.

Model Information

Specifications

Model Number	DRF-24V480W1G□A	DRF-48V480W1GD/
nput Ratings / Characteristics		
Nominal Input Voltage	100-240 Vac	
Input Voltage Range	90-264 Vac	
Nominal Input Frequency	50-60 Hz	
Input Frequency Range	47-63 Hz	
DC Input Voltage Range*1	127-375 Vdc	
Input Current	4.7 A typ. @ 115 Vac, 2.4 A typ. @ 230	Vac
Efficiency at 100% Load	95.0% typ. @ 230 Vac	
Average Efficiency (25%, 50%, 75%, 100%)	91.5% typ. @ 115 Vac	
No Load Power Consumption	0.75 W typ. @ 115 Vac & 230 Vac	1 W typ. @ 115 Vac & 230 Vac
Max Inrush Current (Cold Start)	40 A typ. @ 230 Vac	
Power Factor at 100% Load	> 0.96 @ 115 Vac & > 0.93 @ 230 Vac	
Leakage Current	< 1.5 mA @ 240 Vac	

*1 Power Supply can operate at DC Input voltage, please connect +pole to L, -pole to N and PE terminal to an earth wire or to the machine ground.

Engineering Data

Output Load De-rating VS Surrounding Air Temperature

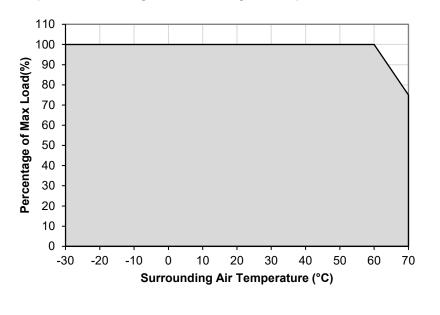

Fig. 1De-rating for Vertical Mounting Orientation
> 60°C de-rate power by 2.5 % / °C

Note

- 1. Power supply components may degrade, or be damaged, when the power supply is continuously used outside the shaded region, refer to the graph shown in Fig. 1.
- The PSU will be bouncing and start up time will not exceed 5 s when ambient temperature at -30°C.
- 3. If the output capacity is not reduced when the surrounding air temperature > 60°C, the device will run into Over Temperature Protection. When activated, power supply will latch off, until the surrounding air temperature is lowered or the load is reduced as far as necessary to keep the device in working condition, and require removal/re-application of input AC voltage in order to restart.
- 4. In order for the device to function in the manner intended, it is also necessary to keep a safety distance as recommended in the safety instructions while the device is in operation.
- 5. Depending on the surrounding air temperature and output load delivered by the power supply, the device can be very hot!
- 6. Need to consider power de-rating if Surrounding Air Temperature is > 60°C.
- 7. If the device has to be mounted in any other orientation, please leave a message via the <u>Contact Us</u> form.
- No output power de-rating for the input voltage from 100 Vac to 264 Vac & 127 Vdc to 375 Vdc

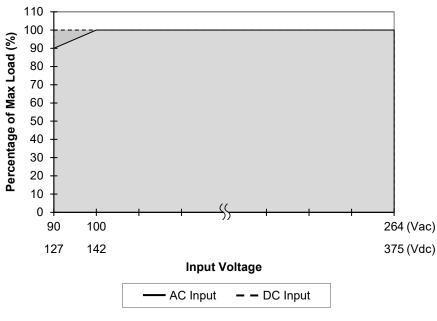

Fig. 2 De-rating for AC & DC Input Voltage < 100 Vac de-rate power by 1 % / Vac No de-rate power for DC Input

All parameters are specified at 25°C ambient and AC input unless otherwise indicated. www.DeltaPSU.com (January 2024, Rev. 03.1)

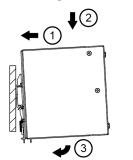

Output Load De-rating VS Input Voltage

Assembly & Installation

The power supply unit (PSU) can be mounted on 35 mm DIN rails in accordance with EN 60715. The device should be installed with input terminal block at the bottom.

Each device is delivered ready to install.

Mounting

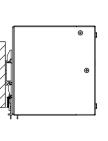

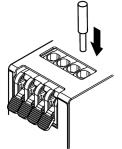

Fig. 3.1 Mounting

Snap on the DIN rail as shown in Fig. 3.1:

- 1. Tilt the unit upwards and insert it onto the DIN rail.
- 2. Push downwards until stopped.
- 3. Press against the bottom front side for locking.
- 4. Shake the unit slightly to ensure that it is secured

Connecting a Wire to Spring Clamp Terminals

1. Open the lever and insert the wire.

To disconnect the wires, reverse the procedure. Flexible cables require ferrules.

Dismounting

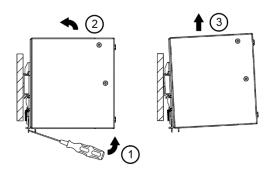

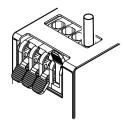

Fig. 3.2 Dismounting

To uninstall, Delta provides an easy way to pull or slide down the latch with screw driver as shown in Fig. 3.2. Then slide the power supply unit (PSU) in the opposite direction, release the latch and pull out the power supply unit (PSU) from the rail.

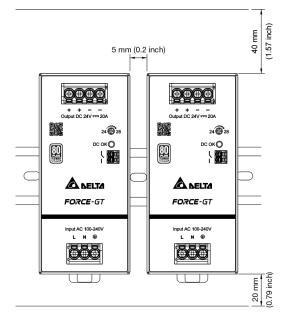

2. Close the lever.

Safety Instructions

Vertical Mounting

- ALWAYS switch mains of input power OFF before connecting and disconnecting the input voltage to the unit. If mains are not turned OFF, there is risk of explosion / severe damage.
- To guarantee sufficient convection cooling, keep a distance of 40 mm (1.57 inch) above and 20 mm (0.79 inch) below the device as well as a lateral distance of 5 mm (0.2 inch) to other units and if load less than 50%, lateral distance can be 0 mm. In case the adjacent device is a heat source, the lateral distance will be 15 mm (0.6 inch) at 230 Vac input.
- Note that the enclosure of the device can become very hot depending on the surrounding air temperature and load of the power supply. Risk of burns!
- The main power must be turned off before connecting or disconnecting wires to the terminals.
- DO NOT insert any objects into the unit.
- Hazardous voltages may be present for up to 5 minutes after the input mains voltage is disconnected. Do not touch the unit during this time.
- The power supplies are built in units and must be installed in a cabinet or room (condensation free environment and indoor location) that is relatively free of conductive contaminants.

Functions

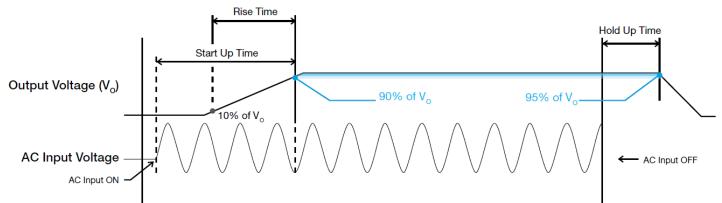

DC OK Relay Contacts and LED Indicator Characteristics

DC OK Relay Contacts Status	Characteristics
Contact closes	The output voltage > 90% typ. of its steady state set value.
Contact opens	The output voltage < 90% typ. of its steady state set value.

Operating Status	DC OK (Green LED)	DC OK Relay Contact
Normal Operation	ON	Closed
Overload (Hiccup Mode)	INTERMITTENT	Open
Output Short Circuit	INTERMITTENT	Open
Over Temperature	OFF	Open
No Input Power	OFF	Open

Graph illustrating the Start-up Time, Rise Time, and Hold-up Time

Start-up Time

The time required for the output voltage to reach 90% of its final steady state set value, after the input voltage is applied.

Rise Time

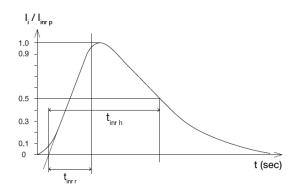

The time required for the output voltage to change from 10% to 90% of its final steady state set value.

Hold-up Time

Time between the collapse of the AC input voltage, and the output falling to 95% of its steady state set value.

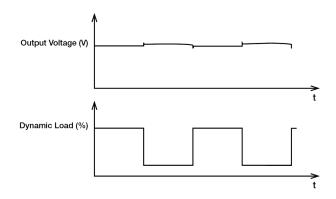

Inrush Current

Inrush current is the peak, instantaneous, input current measured and, occurs when the input voltage is first applied. For AC input voltages, the maximum peak value of inrush current will occur during the first half cycle of the applied AC voltage. This peak value decreases exponentially during subsequent cycles of AC voltage.

Dynamic Response

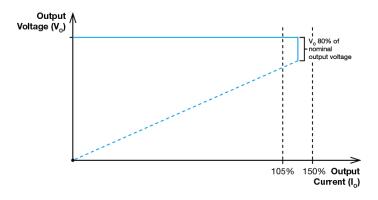

The power supply output voltage will remains within $\pm 10\%$ of its steady state value, when subjected to a dynamic load from 10% to 100% of its rated current.

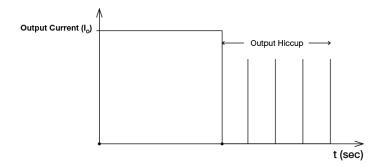

Overload & Overcurrent Protections (Continuous Current)

The power supply offers constant current limit protection for inductive and capacitive load applications when output current range is 105~150% of I₀ (Max load) and output voltage large than 80%. Upon such an occurrence, the V₀ (output voltage) will start to droop. Once the power supply has reached its maximum power limit, the protection will be activated; and, the power supply will operate in continuous current. The power supply will recover once the cause of OLP or OCP is removed, and I₀ (output current) is back within the specified range.

Short Circuit Protection (Auto-Recovery)

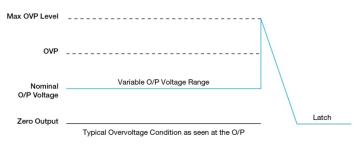

The power supply's output Short Circuit Protection function also provides protection against short circuits. When a short circuit is applied, the output current will operate in "Hiccup mode". The power supply will return to normal operation after the short circuit is removed.

Overvoltage Protection (Latch Mode)

The power supply's overvoltage circuit will be activated when its internal feedback circuit fails. The output voltage shall not exceed its specifications as described in "Protections" section. Power supply will latch off, and require removal/re-application of input AC voltage in order to restart.

The power supply should be latch.

Over Temperature Protection (Latch Mode)

As described in load de-rating section, the power supply also has Over Temperature Protection (OTP). In the event of a higher operating temperature at 100% load; or, when the operating temperature is beyond what is recommended in the de-rating graph, the OTP circuit will be activated. When activated, power supply will latch off, until the surrounding air temperature drops to its normal operating temperature or the load is reduced as recommended in the de-rating graph. Removal/re-application of input AC voltage will then be required in order to restart.

Operating Mode

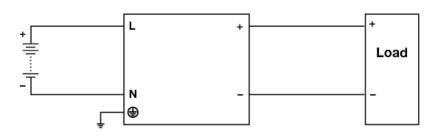

Fig. 4 DC Input Operation Connection Diagram

DC Input Operation

Step 1. Use a battery or similar DC source.

Step 2. Connect +pole to L and -pole to N.

Step 3.

Connect the PE terminal to an earth wire or to the machine ground.
