Descriptions

The DIO1268 is a dual Single-Pole, Double-Throw (SPDT) analog switch. DIO1268 operates from a single 1.6V to 4.2V supply and features an ultra-low on resistance of 0.75Ω at a 4.2V supply and $T_A = 25^\circ\text{C}$. This device is fabricated with sub-micron CMOS technology to achieve fast switching speeds and is designed for break-before-make operation.

DIO1268 guarantees 0.03Ω on-resistance matching between switches, on-resistance flatness over the signal range, high off-isolation and low crosstalk, which ensures excellent linearity and low distortion when switching audio signals. DIO1268 consists of two normally open and two normally close switches.

DIO1268 provides packages with Green 10-lead DQFN, 10-lead QFN.
