

SERIES 970

POWERTRIP™ CONNECTORS

THE POWER CONNECTOR FOR EXTREME ENVIRONMENTS

FIRST EDITION • MARCH 2013

SERIES 970
HIGH CURRENT,
HARSH ENVIRONMENT

POWERTRIP™

*The power connector
for extreme environments*

Protect circuits with Series 970 PowerTrip™ connectors

The George HW Bush, pictured above, is the first US Navy surface ship to use the Series 970 PowerTrip™ connector. Series 970 connectors fill the need for a military-grade harsh environment power connector with improved mechanical, environmental and electrical performance. PowerTrip™ also delivers reduced size and weight compared to lower-density 5015 type power connectors. Featuring triple-start mating threads, crimp rear-release contacts, upgraded finish choices and improved EMI protection, the PowerTrip™ connector is ideal for power distribution units, hybrid electric drives, motors, and other high current, high-reliability applications.

Series 970 Connectors and Accessories Introduction

Cutaway View, Features and Benefits

Series 970 PowerTrip™ Connectors

The Series 970 connector is a high current, harsh environment connector capable of meeting the demanding requirements of modern defense and aerospace systems. The connector is significantly smaller and lighter than lower-density 5015 type connectors.

Features

- **Fast, easy connector mating with triple-start ACME thread. 360° turn for full mating**
- **5 polarizing keys, 6 keying positions**
- **LouverBand sockets for improved conductivity and longer life**
- **High conductivity copper alloy contacts**
- **Crimp, rear release contact system**
- **Splined backshell interface for improved EMI protection**
- **Ratcheting coupling for secure mating**
- **-65° C to +200° C**
- **Size 8, 4 and 1/0 contact sizes**
- **Last-mate, first-break size 12 and 16 contacts**

Series 970 Connectors and Accessories Introduction

LouverBand Contact System, Current Rating

About the PowerTrip Contact System

Series 970 contacts are precision-machined using high conductivity copper alloy. A stamped and formed spring ("louverband") is installed into the socket contact. The spring is made from 6 mil beryllium copper (BeCu). Testing has demonstrated that this contact system outperforms conventional aerospace-grade contact systems. The louverband spring provides many points of electrical contact with the mating pin, as opposed to a few "high spots" on a conventional four-finger contact as shown in **Fig. 2**. The size #8 Powertrip socket contact has a total of 18 louvers. The #4 has 27 louvers, and the #1/0 has 42 louvers. The louverband design offers lower voltage drop for reduced temperature rise and higher current carrying capacity. In addition to its electrical advantages, the louverband also is mechanically superior to four-finger contacts. The louverband spring has consistent, stable normal force, even when subjected to thousands of mating cycles and temperature extremes.

About "Last-Mate, First-Break" Capability

PowerTrip connectors should be mated and demated only after the circuit has been de-energized. The Powertrip contact arrangements include layouts with size #12 and #16 contacts. These contacts are designed to mate only after the larger power contacts are mated. When uncoupled, the size #12 and #16 contacts separate before the power contacts are disengaged. These smaller contacts are typically used for safety interlock circuits.

About Current Rating

PowerTrip connector current carrying capacity and maximum contact resistance are in accordance with AS39029 specifications for conventional contacts. Testing of Powertrip contacts has shown the contact resistance (voltage drop) to be up to 60% lower than the allowable voltage drops of AS39029. Temperature -Rise tests have also demonstrated the Powertrip contact to generate less heat under load than conventional contacts. However, the maximum safe current load is dependent on a number of application-specific variables. The maximum safe current load is the combination of the electrical load and ambient conditions that do not exceed a maximum connector internal hot-spot temperature of +200° C, which is the maximum recommended operating temperature.

Contact Resistance after 1000 Mating Cycles

Wire Size	Max. Milliohms							
16	5							
20	9							
Magnetic Permeability	2 μ maximum.	EIA-364-54						
Mechanical Durability, at Ambient Temperature	No deterioration which will adversely affect the connector after 500 cycles of mating and unmating. Connectors shall meet contact resistance, insulation resistance, shell-to-shell resistance, DWV, and coupling torque.	EIA-364-09						
Mechanical Shock	No discontinuity of greater than 1 microsecond, no cracking, breaking or loosening of parts, plug shall not become disengaged from receptacle. Connectors shall meet electrical requirements after shock test.	EIA-364-27 Condition D 3 shocks X 3 axes X 2 directions = 18 shocks 2941 m/s ² (300 g's), 3 ms, half-sine						
Operating Temperature	-65°C to +200°C Filter Connectors -55°C to +125°C							
Outgassing	Connectors, when specially processed for outgassing control, shall not exceed 1.0% Total Mass Loss (TML) and 0.1% Collected Volatile Condensable Material (CVCM)	ASTM E 595						
Ozone Exposure	No evidence of degradation due to ozone exposure that will adversely affect performance	EIA-364-14 Wired, mated connectors						
Resistance to Indirect Lightning Strike	No damage or degradation to material or finish that would affect subsequent use, no damage or hardening of elastomeric materials that adversely affects sealing effectiveness. Connector must meet coupling torque, DWV and IR and shell-to-shell conductivity.Applicable to connectors with conductive plating finishes.	EIA/ECA-364-75 Table XII, group 14 10,000 Amps peak current Test details per MIL-DTL-38999 Para. 4.5.47						
Shell-To-Shell Conductivity	Finish Code ME 1 millivolt drop maximum Finish Code NF, MT 2.5 millivolt drop maximum Finish Code ZR 10 millivolt drop maximum Finish Code Z1 50 millivolt drop maximum	EIA-364-83 Unwired connectors						
Socket Contact Engagement and Separation Force	Contact engagement and separation forces shall meet the requirements of SAE AS39029 Table 9	SAE AS39029						
Thermal Shock	No mechanical damage or loosening of parts. Following thermal shock, connector shall meet contact resistance, DWV, insulation resistance and shell-to-shell resistance requirements.	EIA-364-32 Test Condition VI 5 cycles consisting of -65° C 30 minutes, +25° C 5 minutes max., +200° C 30 minutes, +25° C 5 minutes max.						
Vibration, Random, at Ambient Temperature	No discontinuity of greater than 1 microseconds, no cracking, breaking or loosening of parts, plug shall not become disengaged from receptacle. Connectors shall meet electrical requirements after vibration test.	MIL-DTL-38999 Para. 4.5.23.2.4						
Vibration, Random, at Elevated Temperature	No discontinuity of greater than 1 microseconds, no cracking, breaking or loosening of parts, plug shall not become disengaged from receptacle. Connectors shall meet electrical requirements after vibration test.	EIA-364-28 Test Condition VI Letter “J” 50- 2,000 Hz 43.92 g rms 200° C						
Vibration, Sine	No discontinuity of greater than 1 microseconds, no cracking, breaking or loosening of parts, plug shall not become disengaged from receptacle. Connectors shall meet electrical requirements after vibration test.	MIL-DTL-38999L Para. 4.5.23.2.1						
Water Immersion	No evidence of water penetration into mated connectors.	MIL-STD-810F Method 512.4,1 meter immersion for 1 hour						
Water Pressure	No evidence of water penetration into mated connectors or backshell interface. ≥ 100 MΩ insulation resistance.	MIL-DTL- 28840 Paragraph 4.1.15. 6 feet immersion in tap water, 48 hours						
Outgassing	Special Bakeout Required 1.0% Total Mass Loss (TML) 0.1% Collected Volatile Condensable Material (CVCM)	ASTM E595						

Series 970 Connectors and Accessories Technical Reference Material and Finish Options

MATERIAL AND FINISH OPTIONS FOR POWERTRIP CONNECTORS AND ACCESSORIES

Powertrip connector shells are made of aluminum alloy or stainless steel. These shells are plated to improve corrosion resistance and conductivity. Electroless nickel plating is used for instrumentation, avionics and space applications where corrosion protection is not critical. Cadmium plating provides superior corrosion protection, but the United States Department of Defence (DOD) mandated the elimination of cadmium from DOD weapons systems because of toxicity concerns. The European Union has also restricted the use of cadmium on electronics equipment (RoHS). The top choices for cadmium replacement are Nickel-PTFE (MT) and Zinc-Nickel (ZR). In this catalog you will find four standard platings for aluminum shells: **Electroless Nickel**, **Nickel-PTFE**, **Black Zinc-Nickel**, and **Olive-Drab Cadmium**. A fifth option is **Passivated Stainless Steel** for extremely hostile environments. Glenair also offers dozens of optional material and finish options, typically with no minimum orders or lengthy lead times. A selection of these optional finishes is shown in the table below.

STANDARD MATERIAL & FINISH SELECTION GUIDE

Property	Alum/ Nickel	Alum/ Nickel-PTFE	Alum/ Olive Drab Cadmium	Alum/ Black Zinc-Nickel	SST/ Passivate
Glenair Code	ME	MT	NF	ZR	Z1
Corrosion Resistance	Fair	Excellent	Excellent	Excellent	Excellent
Temperature Range	-65°C to +200°C	-65°C to +175°C	-65°C to +175°C	-65°C to +175°C	-65°C to +200°C
Salt Spray Hours	96	1000 ⁽¹⁾	1000 ⁽¹⁾	1000 ⁽¹⁾	2000
Conductivity	Excellent	Excellent	Good	Good	Fair
Relative Cost	\$\$	\$\$\$	\$\$	\$\$\$	\$\$\$\$
RoHS Compliant ⁽²⁾	Yes	Yes	No	Yes	Yes

(1) Dynamic salt spray testing reduces 1000 hours to 500 hours. Dynamic testing includes 500 connector mating cycles.

(2) Does not contain cadmium or hexavalent chromium. Meets EU requirements.

The following table contains optional plating codes not shown in the ordering information. If one of these optional finishes is preferred over the above standard finishes, substitute the appropriate code in the part number.

OPTIONAL MATERIAL AND FINISH CODES

Code	Material	Finish	Finish Specification	Hrs. Salt Spray	Electrical Conductivity	Operating Temp. Range	RoHS Compliance ⁽²⁾

ZN	Aluminum	Zinc-Nickel, Olive Drab	ASTM B841	500	Conductive	-65 to +175°C	
ZNU	Aluminum	Zinc-Nickel, Black	ASTM B841	500	Conductive	-65 to +175°C	
ZU	Stainless Steel	Cadmium, Black	SAE-AMS-QQ-P-416	1000	Conductive	-65 to +175°C	
ZW	Stainless Steel	Cadmium, Olive Drab	SAE-AMS-QQ-P-416	2000	Conductive	-65 to +175°C	

(1) Dynamic salt spray testing reduces 1000 hours to 500 hours. Dynamic testing includes 500 connector mating cycles.

(2) Does not contain cadmium or hexavalent chromium. Meets EU requirements.

POWERTRIP™ CONNECTORS FOR SPACE FLIGHT

OUTGASSING

- **Standard connectors must be baked out to meet outgassing requirements.**
- **Modification codes are a convenient way to specify special outgassing bakeout.**

Space flight equipment requires low-outgassing components in order to prevent degradation to optics and other sensitive instruments. The space industry has adopted a standardized test procedure, ASTM E595, to evaluate outgassing properties. In the ASTM test, material samples are heated to 125° C at a vacuum of 5×10^{-5} torr for 24 hours. The test sample is then weighed to calculate the Total Mass Loss (TML), which may not exceed 1.0% of the total initial mass. A collector plate is used to determine the Collected Volatile Condensable Material (CVCM), which may not exceed 0.1% of the total original specimen mass. Powertrip™ connectors contain nonmetallic materials such as rubber, plastic, adhesives and potting compounds which can give off gasses when subjected to a vacuum or high heat. Unless the connector is specially processed, the TML and CVCM can exceed allowable limits. Glenair is able to offer two bakeout processes which assure all materials comply with ASTM E595: an 8 hour oven bakeout at 400° F or a 24 hour thermal vacuum outgassing at 125° C. The table below shows suffix codes which specify outgassing processing.

CONNECTOR MATERIAL AND FINISH OPTIONS

- **Cadmium and silver plating are prohibited in space.**
- **Specify electroless nickel plating on connector shells and gold plating on contacts.**

Some types of metals are prohibited for space flight. "Cadmium, zinc, chemically coated cadmium or zinc, or silver shall not be used as a connector or contact finish" (NASA EEE-INST-002 Instructions for EEE Parts Selection, Screening, Qualification, and Derating). NASA recommends electroless nickel or gold plating on connector shells and gold plating for contacts.

NASA SCREENING

- **"Mission critical" connectors for space flight should undergo rigorous 100% final inspection.**
- **Modification codes are available to invoke special screening.**

NASA recommends that connectors for space flight be specially screened. NASA EEE-INST-002 Instructions for EEE Parts Selection, Screening, Qualification, and Derating contains three levels of screening: level 1 for highest reliability, level 2 for high reliability and level 3 for standard reliability. Glenair suffix codes are available to invoke NASA screening. The table below shows these "Mod" codes which can also include outgassing processing.

NASA SCREENING LEVELS AND MODIFICATION CODES			
NASA Screening Level	Special Screening Only	Special Screening Plus Outgassing Processing	
		48 Hour Oven Bake 175° C.	Thermal Vacuum Outgassing 24 hrs. 125° C.
Level 1 Highest Reliability	Mod 429B	Mod 429J	Mod 429C
Level 2 High Reliability	Mod 429	Mod 429K	Mod 429A
Level 3 Standard Reliability	(Use standard part number)	Mod 186	Mod 186M

Series 970 PowerTrip™ Connectors and Accessories

Cable Connectors

970-001 Plug with Accessory Thread

PLUG CONNECTORS

Series 970 PowerTrip™ plug connectors feature high current LouverBand contacts and rugged water resistant construction for the most demanding environments. Coupling threads are triple-start ACME type. EMI protected with ground spring and splined backshell interface. Anti-decoupling ratchet prevents de-mating under vibration. Standard contacts are silver plated high conductivity copper alloy, or choose gold-plated contacts for improved corrosion protection. Fluorosilicone rubber gaskets and grommets provide watertight sealing. Contacts are packaged with connector.

- EMI Protected
- High Current Contacts
- Splined Backshell Interface
- Ratchet Self-Locking

PRODUCT FACTS

2000 VAC Sea Level DWV Rating
 -65°C to +200°C Operating Temperature

- Duraelectric™ rubber
- 2000 volt rating
- -65° to +260°C

Overmold Compound:

- Duraelectric™ rubber
- 2000 volt rating

Features:

- Excellent cold temperature flexibility
- 2000 volt rating
- Good abrasion resistance
- Excellent resistance to fuels and solvents
- Halogen free
- Flame retardant
- Water resistant
- Fugus resistant
- Excellent resistance to sunlight (UV) and ozone
- Fully shielded for EMI/RFI protection

Save cost and reduce leadtimes with Glenair-made Powertrip cordsets. Ultra-flexible overmolded power cords feature Glenair's high performance **Duraelectric™** rubber. Originally developed for US Navy conduit applications, flame retardant **Duraelectric™** elastomer has excellent cold temperature flexibility and outstanding resistance to solar radiation, solvents and fuels. Low smoke, zero halogen (LSZH) material. Glenair TurboFlex wires feature high strandcount copper and extruded **Duraelectric™** insulation. Outer jacket and overmold are **Duraelectric™** material.

Duraelectric™ Test Data and Specifications

Temperature Rating: -60°C to 260°C (with excursions to 290°C) Per MIL-PRF-24758A.

Halogen free per IEC 60614-1. Less than 5mg of HCl per 1 gram of product used.

Accelerated weathering (solar) per IEC 60068-2-5; 56 days exposure (equivalent to 50 years in the sun.)

Flame resistant per IEC 60614-1; material does not sustain combustion when the source of flame is removed.

Low smoke index per NES 711 (11.75); minimum standard is 25. Tested level is 11.75.

Smoke density class F1 per NF F 16-101 in accordance with DIN EN 60695-2-11:2001.

Toxicity index per NES 713 (1.9); minimum standard is 5. Tested level is 1.9.

Oxygen limiting index: 45.1 per EN ISO 4589-2:1999; minimum is 28.

12 second vertical burn: (pass) per 14CFR part 25.853 (a) AMDT25-116 APP F part 1 (a) (1) (ii)

Fluids per MIL-STD-810F, method 504

Fuel	MIL-T-83133: JPG
Hydraulic fluid	MIL-H-5606: Royco 756
Lubricating oil	MOL-L-23699: Royco -500
Cleaner	MIL-C-85570: calla -855
Solvent	Isopropyl Alcohol: TT-I-735
De-Icer	AMS-1432: E36 runway de-icer
Coolant	MIL-C-87252: Coolanol 25R
Fire extinguishing foam	Amerex AFFF

ASTME E 595 vacuum outgassing-post bake results: TML .06%, CVCM .006%, WVR .02%

Fungus resistance testing (rating of 0) per MIL-STD-810F, method 508.5

ASTM D624 DIE B tear test: 150 KN/M

Series 970 PowerTrip™ Connectors and Accessories

Receptacle Connectors

970-003 Square Flange Receptacle

Receptacle
Connectors

970-003 REAR PANEL MOUNT, SQUARE FLANGE RECEPTACLE

Series 970 PowerTrip™ extreme environment receptacle connectors are intended for high current applications where size 8 AWG to size 1/0 AWG wires are used. These connectors feature high current LouverBand contacts. Coupling threads are triple-start ACME type. EMI protected with ground spring on mating plug and splined backshell interface. Standard contacts are silver plated high conductivity copper alloy, or choose gold-plated contacts for improved corrosion protection. Fluorosilicone rubber gaskets and grommet provide watertight sealing. Contacts are packaged with connector.

- EMI Protected
- High Current Contacts
- Submersible
- Harsh Environment

Receptacle Connectors

970-009 Low Profile Square Flange Receptacle

Receptacle
Connectors

970-009 LOW PROFILE, REAR PANEL MOUNT, SQUARE FLANGE RECEPTACLE

970-009 receptacles have a shorter profile than standard square flange receptacles. This reduced protrusion behind the mounting panel results from removing the accessory threads, moving the mounting flange and replacing the grommet wire seal with a thinner wire separator. Series 970 PowerTrip™ extreme environment receptacle connectors are intended for high current applications where size 8 AWG to size 1/0 AWG wires are used. These connectors feature high current LouverBand contacts. Coupling threads are triple-start ACME type. EMI protected with ground spring and splined backshell interface. Standard contacts are silver plated high conductivity copper alloy, or choose gold-plated contacts for improved corrosion protection. Contacts are packaged with connector. Red stripe indicates full mating condition when the plug connector coupling ring fully covers the stripe.

970-009 connectors have a low profile wire separator instead of a thick watertight rear grommet. These connectors are splashproof but are not rated for water immersion or altitude immersion.

Series 970 PowerTrip™ Connectors and Accessories
Receptacle Connectors
970-013 O-ring Sealed, Low Profile Square Flange Receptacle

970-013 REAR PANEL MOUNT SQUARE FLANGE RECEPTACLE

970-013 receptacles feature an O-ring for panel sealing. Low profile for reduced clearance inside equipment. Connector mounting flange is enlarged to include the O-ring. Series 970 PowerTrip™ extreme environment receptacle connectors are intended for high current applications where size 8 AWG to size 1/0 AWG wires are used. Contacts snap into connector and can be removed with a plastic tool. These connectors feature high current LouverBand contacts. Coupling threads are triple-start ACME type. EMI protected with ground spring and splined backshell interface. Standard contacts are silver plated high conductivity copper alloy, or choose gold-plated contacts for improved corrosion protection. Contacts are packaged with connector. Red stripe indicates full mating condition when the plug connector coupling ring fully covers the stripe.

970-013 connectors have a low profile wire separator instead of a thicker watertight rear grommet. These connectors are splashproof but are not rated for water immersion or altitude immersion.

970-004 Jam-Nut Receptacle

Receptacle
Connectors

970-004 REAR PANEL MOUNT JAM-NUT RECEPTACLE

Series 970 PowerTrip™ extreme environment receptacle connectors are intended for high current applications where size 8 AWG to size 1/0 AWG wires are used. These connectors feature high current LouverBand contacts. Coupling threads are triple-start ACME type. EMI protected with ground spring and splined backshell interface. Standard contacts are silver plated high conductivity copper alloy, or choose gold-plated contacts for improved corrosion protection. Fluorosilicone rubber gaskets and grommets provide watertight sealing. Contacts are packaged with connector.

- EMI Protected
- High Current Contacts
- Splined Backshell Interface
- Ratchet Self-Locking

Series 970 PowerTrip™ Connectors and Accessories

Receptacle Connectors

970-010 Low Profile, Jam-Nut Receptacle

Receptacle
Connectors

970-010 LOW PROFILE, REAR PANEL MOUNT JAM-NUT RECEPTACLE

970-010 receptacles have a shorter profile than standard jam-nut receptacles. This reduced protrusion behind the mounting panel results from removing the accessory threads, moving the mounting flange and replacing the grommet wire seal with a thinner wire separator. Series 970 PowerTrip™ extreme environment receptacle connectors are intended for high current applications where size 8 AWG to size 1/0 AWG wires are used. Contacts snap into connector through rear wire separator and can be removed with a plastic tool. These connectors feature high current LouverBand contacts. Coupling threads are triple-start ACME type. EMI protected with ground spring and splined backshell interface. Standard contacts are silver plated high conductivity copper alloy, or choose gold-plated contacts for improved corrosion protection. Contacts are packaged with connector. Red stripe indicates full mating condition

970-010 connectors have a low profile wire separator instead of a thick watertight rear grommet. These connectors are splashproof but are not rated for water immersion or altitude immersion.

Receptacle
Connectors

970-006 BULKHEAD FEED-THRU CONNECTOR

Series 970 PowerTrip™ jam-nut mount bulkhead feed-thru connectors have pin contacts on one side and socket contacts on the other side. Mount to bulkhead and attach mating plug connectors to both sides. Coupling threads are triple-start ACME type. Contacts are factory-installed and are non-removable. Standard contacts are silver plated high conductivity copper alloy for excellent conductivity, or choose gold-plated contacts for improved corrosion protection. Jam-nut mount available for panel thicknesses from 1/16 inch (1.58mm) up to 1.4 inches (35.56mm).

- High Current Contacts
- Harsh Environment

970-012 Square Flange Mount, Solder Cup Hermetic

Feed-Thru
Connectors

970-012 HERMETIC REAR PANEL MOUNT, SQUARE FLANGE RECEPTACLE

Series 970 PowerTrip™ hermetic receptacles feature 316L stainless steel shells and compression glass insulators. Solder cup contacts are nickel-iron alloy and are non-removable. Coupling threads are triple-start ACME type. Contacts are silver plated high conductivity copper alloy, or choose gold-plated contacts. Fluorosilicone rubber face seal on pin connector. Stainless steel shells are passivated, or choose nickel plating for improved shell-to-shell conductivity and EMI protection. Hermeticity is 1×10^{-7} cc/sec maximum helium leak rate with one atmosphere pressure differential.

- **Compression Glass Seal**
- **1×10^{-7} cc/sec He leak rate**
- **Both Pin and Socket Versions**
- **Stainless Steel Shell**

970-025 Hermetic, Solder Cup, Jam-Nut Receptacle

Feed-Thru
Connectors

970-025 HERMETIC, REAR PANEL MOUNT JAM-NUT RECEPTACLE

Series 970 PowerTrip™ hermetic solder cup receptacles can be ordered with pin or socket contacts. Mates with 970-001 or 970-011 plug of the same shell size, contact layout and polarization. Compression glass hermetic seal. 100% tested to meet helium leak rate of 1×10^{-7} cc/second at 15 psi pressure differential. Contacts are factory-installed and are non-removable. Standard gold-plated contacts for improved corrosion protection. Silver plated contacts available for contact sizes 0, 4, and 8 only. Jam-nut rear panel mounting, for panel thicknesses from $\frac{1}{16}$ inch (1.58mm) to $\frac{1}{2}$ inch (12.7mm).

Filter Receptacles

240-970J Jam Nut Receptacle

240-970J FILTER RECEPTACLE, JAM NUT

Series 970 PowerTrip™ filter receptacles feature planar array ceramic capacitors. Solder cup contacts are factory-installed, epoxy sealed and are non-removable. Socket contacts have copper alloy louverband spring for multiple points of electrical contact. Coupling threads are triple-start ACME type. Contacts are gold plated. Fluorosilicone rubber face seal on pin connector. Aluminum or stainless steel shell.

POWERTRIP™
POWERLINE
FILTERS

POWERLINE FILTERS WITH COMMON MODE CHOKES AND LINE-TO-LINE FILTERING

*Contact factory for high-performance, low heat
dissipation powerline filtering*

Powerline filters suited for filtering DC and AC mains services are typically designed to incorporate both common-mode and differential-mode filters (line-to-line). Common mode chokes capable of screening both incoming and outgoing noise and transients (see example schematic) are ideally suited for incorporation in Series 970 PowerTrip™ filter connectors. All multiple-line filters employ modern filter elements incorporating compensating inductors or coupled chokes. PowerTrip powerline filters are typically supplied as made-to-order (bespoke) solutions. Please contact the factory for application engineering assistance.

Series 970 PowerTrip™ Connectors and Accessories

Contacts and Tools

Crimp Contacts

CRIMP CONTACTS

Series 970 PowerTrip™ contacts for size #16 through Size #1/0 wire. Size #8, #4 and #1/0 contacts are high conductivity copper alloy (IACS >90%) with silver or gold plating. Size #12 and #16 contacts are copper alloy with gold over palladium finish. Size #1/0, 4 and 8 socket contacts feature low resistance, high durability louverband springs. Terminate to wire with standard crimp tools. Contacts are snap-in, rear-release and meet the performance requirements of SAE AS39029.

PNEUMATIC CRIMP TOOL FOR #8, #4 AND #1/0 CONTACTS

C Bench mount pneumatic crimp tool. Heavy duty, four-indent crimp termination. Attach to air supply with quick-disconnect fitting or install 1/4 NPT fitting into tapped port. 90-120 psi air supply. Requires die assemblies and locators, sold separately. Hand actuate with push-button valve trigger on handle. Steel with black wrinkle enamel coating. 13 inches overall length, 9.2 inches tall, 17 pounds (7.7 Kg).

D Indenter Die Assembly. Precision four-indent die with hardened tool steel indenters, stainless steel housing. Separate die assembly required for each contact size.

E Locator. Aluminum locator positions contact at correct depth for crimping. Separate locator required for each contact size.

BAND-MASTER™ ATS SHIELD TERMINATION TOOL AND BANDS

Fast, cost-effective shield termination. Attach cable shield to 440-069 EMI/RFI backshells with stainless steel bands. The **Band-Master™** system offers fast termination and the flexibility to handle a wide range of parts with just one band size. Contact factory about QPL approved bands for aerospace and defense applications.

A Banding tool for use with .250" (6.4mm) width bands. Digital counter improves calibration interval accuracy. Supplied with hardshell case and instruction booklet. 1.18 lbs., 5.75" length.

B .250" (6.4mm) width band. Supplied flat or pre-coiled in two lengths. Stainless steel.

BACKSHELL ASSEMBLY TOOLS

Glenair assembly tools accomplish proper tightening of adapters and backshells. Torque wrenches, soft jaw pliers, strap wrenches, and circular wrenches speed up assembly and prevent damage to connectors and backshells.

Interconnect Cable Assembly Tools Catalog has assembly tools, shield termination tools, fiber optic termination tools. Contact Glenair or go to www.glenair.com.

BACKSHELLS AND ACCESSORIES FOR SERIES 970 CONNECTORS

Shrink Boot Adapters

These spin-coupling adapters are available in straight, 45° and 90° versions. Use with unshielded cable.

310-001 Page 52

EMI Band-Master™ Adapters

These spin-coupling banding adapters have a knurled platform for EMI shield attachment and boot groove.

440-069 Page 58

Heatshrink Boots

Rugged boots provide strain relief and environmental protection. Available in low-toxicity material.

770-003 Page 54

Strain Relief Clamp

Open frame cable clamp is designed for use with large, heavy power cable. Optional wire support bushing.

620PS076 Page 56

Submersible Backshell

Heavy duty environmental backshell features saddle clamp or wire mesh cordgrip for strain relief.

370-024 Page 60

EMI/RFI Backshell

Non-environmental backshell with ground rings for cable shield termination, heavy duty saddle bar clamp.

380-105 Page 64

Submersible EMI Backshell

Heavy duty environmental backshell features ground rings, silicone O-rings and cable gland.

390-055 Page 67

Submersible EMI Backshell

MIL-DTL-28840 type heavy duty backshell, straight exit, with saddle bar strain relief.

390PS036 Page 72

Submersible EMI Backshell

MIL-DTL-28840 type heavy duty backshell, straight exit, with wire mesh cord grip.

390PS086 Page 70

Protective Covers

Thread-on metal covers with a variety of attachments.

660PS097/098

Page 76

Bean Rubber Covers

Black rubber covers with multiple attachment styles.

780-001/002

Page 79

Mounting Gaskets

Elastomeric gaskets for square flange receptacles.

Page 74

Series 970 PowerTrip™ Connectors and Accessories

310-001 Heatshrink Boot Adapters

310-001 BOOT ADAPTERS

Attach Series 77 heatshrink boots to PowerTrip connectors with spin-coupling 310-001 boot adapters. These adapters feature self-locking ratchet to prevent loosening under vibration. Boot groove accepts standard lipped heatshrink boots.

How To Order Adapters with Boots

Add "T" to the adapter part numbers in the table below. The adapter and boot will be supplied as a kit.

770-003S Heatshrink Boots

HEATSHRINK BOOTS

About User-Installed Adhesive

Heat-shrink boots are not watertight unless equipped with pre-coated or user-installed adhesives. When heat is applied to the boot, the adhesive melts and fixes the boot to the adapter and cable jacket to provide the necessary sealing as well as mechanical strain-relief. For maximum performance Glenair recommends Type U user-installed two-part epoxy adhesive which offers reduced boot installation time and easier installation. Pre-coated boots require additional care to install because the boot must be heated sufficiently to activate the epoxy, at the risk of overheating the overall assembly. A single 50 ml duo syringe can coat many boots. The duo syringe can be re-capped for re-use. Inexpensive mixing nozzles must be discarded after each use.

NOTE: Glenair high-performance two part epoxy meets VG95343 part 15.

See next page for ordering information on user-installed two part epoxy adhesive.

Series 77 "Full Nelson" Shrink Boot Catalog has additional boot styles, technical information, installation instructions and other heatshrink products. Contact Glenair or go to www.glenair.com.

Heatshrink boots provide strain relief and environmental protection. Shape-memory polymer returns to as-molded shape when heat is applied. Use with 310-001 unshielded boot adapters or 440-069 **Band-Master™** EMI adapters. Boot lip fits adapter groove for precise fit. Semi-rigid high performance elastomer resists high temperature and withstands exposure to petroleum-based fluids and fuels. Also available with non-halogenated flame-retardant polyolefin for use where limited fire hazard is required.

MATERIAL SELECTION GUIDE

- 1 High Performance Elastomer** -75°C to +150°C. Semi-rigid high performance elastomer combines excellent resistance to fuels, oils and solvents with superior performance at extreme temperatures. Material meets the requirements of VG95343 Type 6, BSG 198-5-DE, EN62329-102 and SAE AS5258 Type H. These boots are recommended for demanding applications such as military vehicles and petrochemical exploration.
- 2 Zero Halogen Polyolefin** -30°C to +135°C. Low Smoke Zero Halogen (LSZH) polyolefin boots meet low smoke and toxicity requirements of shipboard, transit and aircraft systems. Oxygen index greater than 30%, smoke index less than 20, and toxicity index under 3 per 100 grams. Material meets requirements of NAVSEA 5617649, VG95343 Part 29, BSG 198-5-DF, EN62329-101 and SAE AS5258 Type G. Good resistance to oils, fuels and solvents.

PRE-COATED ADHESIVE SELECTION GUIDE

- W1 Low Smoke Zero halogen (LSZH) polyamide hot melt adhesive Coating.** Bonds well to a variety of substrates. Good creep resistance at elevated temperatures. Excellent bond strength at low temperature. Good resistance to fuels and oils. -55°C to +125°C. Compatible with Type 1 and Type 2 boot materials.
- R High Temperature Epoxy Adhesive Coating.** Glenair's highest performance pre-coated adhesive. The material requires careful installation using trained operators. -75°C to 150°C. Withstands prolonged high temperature immersion in fuels and oils. Excellent peel adhesion on a wide range of materials. *Compatible with Type 1 boot material only.*

BOOT IDENTIFICATION MARKING

Heatshrink boots are identified with molded-in lettering. This lettering shows the boot type, boot size and orientation. Position the boot so that the lipped "A" end is toward the adapter and the "C" end is toward the cable. Assembly instructions are in the **Series 77 "Full Nelson" Environmental Shrink Boots** catalog, available at www.glenair.com.

USER-INSTALLED BOOT ADHESIVE, DISPENSING GUN AND MIXING NOZZLE

Part Number
779-001

Part Number
779-002

Part Number	Count Per Pack
779-003	12

High performance flexible two part thermoset epoxy provides high strength flexible bond from -55° to 150°C. 50 ml duo syringe fits standard dispensing guns. Use with square green mixing nozzle sold separately. 12 hour cure time at 20°C, 1 hour at 85°C, 30 minutes at 150°C. Apply to inside of boot with wooden spatula. 18 month shelf life.

Twin push-rod 1:1 ratio epoxy dispensing gun for use with duo syringe epoxy and mixing nozzle sold separately. Durable heavy-duty plastic. Gun type hand grip with ratcheting trigger to advance push-rods.

1:1 ratio mixing nozzle attaches to duo syringe with 1/2 turn and locks into place. Nozzle provides consistent mixing of resin and hardener. Kit consists of (12) nozzles.

Series 970 PowerTrip™ Connectors and Accessories

620PS076 Strain Relief Clamp

620PS076 STRAIN RELIEF CLAMP

Spin coupling strain relief clamp with anti-decoupling ratchet prevents loosening under vibration. Fits standard Series 970 connectors. Heavy duty saddle clamp with telescoping screws. Available rigid dielectric bushing provides additional wire support. Aluminum alloy or stainless steel coupling nut, cable clamp and saddle bars. Stainless steel screws, high temperature thermoplastic anti-decoupling device and wire support bushing.

Optional **Wire Support Bushing** holds wires in place to prevent contact splay or grommet distortion. **Not available for layouts with size #12 or #16 contacts.**

Series 970 PowerTrip™ Connectors and Accessories

440-069 EMI/RFI Adapter

440-069 EMI/RFI ADAPTER, BAND-MASTER™ SHIELD TERMINATION

Spin coupling EMI/RFI adapter with anti-decoupling ratchet prevents loosening under vibration. Fits standard Series 970 connectors. Terminate cable shield to backshell with **Band-Master™ ATS** (Advanced Termination System) stainless steel band. Optional heatshrink boot provides strain relief and environmental seal. Backshell features splined connector interface for improved mechanical and electrical performance.

MATERIALS AND FINISHES

Adapter: aluminum or stainless steel. See **How To Order** for material & finish options.

Anti-decoupling spring: high-grade engineering thermoplastic

Series 970 PowerTrip™ Connectors and Accessories

Accessories

440-069 EMI/RFI Adapter

ALTERNATE CONFIGURATION FOR LARGE CABLES

If the cable entry diameter exceeds the diameter of the backshell shown in the table at right, the backshell will be supplied with a **transition adapter**. The clamp and adapters are first installed over the cable jacket, and then are threaded onto the transition adapter. On straight exit backshells, the transition adapter does not affect the length. On 45° and 90° versions the transition adapter adds 1.00 inch (25.4mm) maximum to the backshell length.

Shell Size	Backshell Inside Diameter	
	In.	mm.
18	.72	18.3
20	.85	21.7
24	1.04	26.4
28	1.35	34.3
32	1.62	41.1
36	1.82	46.3
40	2.05	52.0

APPLICATION NOTE: POLYSULFIDE BARRIER FOR GALVANIC CORROSION PROTECTION

Olive drab (OD) cadmium (Cd) over electroless nickel (EN) is available in two versions. The standard version, designated as Glenair code **NF**, is a uniform Cd/EN finish over the entire part. A second version, designated as Glenair code **NFP**, is selectively plated with electroless nickel in the knurled shield attachment area. A polysulfide barrier separates the electroless nickel area from the cadmium plated area. This selectively plated version prevents galvanic corrosion that could potentially occur if nickel-coated shield braid is attached to a cadmium plated surface.

The Polysulfide Process

First, the part is plated with electroless nickel. Next, a tape mask is applied to the shield termination area. Following cadmium plating and chromate conversion coating, the tape is removed, exposing the electroless nickel. Polysulfide is applied with a brush to completely seal the transition area between the nickel and cadmium. The final step is to oven cure the polysulfide.

Series 970 PowerTrip™ Connectors and Accessories

370-024 Submersible Backshell

SUBMERSIBLE BACKSHELL

Heavy duty backshell features positive detent self-locking spin coupling for high vibration environments. For use with unshielded, jacketed power cable. Splined connector interface. Heavy duty cable clamps fit most cable sizes, or choose wire mesh stainless steel cordgrip. Withstands six feet water immersion for 48 hours. Aluminum or stainless steel with silicone gland. Stainless steel telescoping clamp screws. Meets environmental, electrical and mechanical requirements of AS85049 Category 1A Heavy Duty.

MATERIALS AND FINISHES

Adapters, elbows, follower, coupling nut: aluminum or stainless steel. See **How To Order** for material & finish options.

Hardware: stainless steel
Wire Mesh Cordgrip: stainless steel
Screws: stainless steel
Grommet, O-rings: fluorosilicone

ALTERNATE CONFIGURATION FOR LARGE CABLES

If the cable range exceeds the inside diameter of the backshell shown in the table at right, the backshell will be supplied with a **transition adapter** and a second coupling nut. This style of backshell is called a **Style 2**. The transition adapter attaches to the connector. The backshell and clamp fit over the cable jacket. On straight exit backshells, the transition adapter does not affect the length. On 45° and 90° versions the transition adapter adds 1.00 inch (25.4mm) maximum to the backshell length.

EMI/RFI backshell features ground rings for cable braid shield termination. Spin coupling with anti-decoupling ratchet. Splined connector interface. Heavy duty saddle clamp. Aluminum or stainless steel. Stainless steel telescoping clamp screws. Meets environmental, electrical and mechanical requirements of AS85049 Category 3A Heavy Duty. Assembly procedure conforms to Glenair Type F shield terminations.

390-055 EMI/RFI Submersible Backshell

Accessories

SUBMERSIBLE EMI BACKSHELL

Heavy duty backshell features positive detent self-locking spin coupling for high vibration environments. For use with shielded, jacketed power cable. Splined connector interface. Terminate cable shield to inner and outer ground rings. Heavy duty cable clamps fit most cable sizes, or choose wire mesh stainless steel cordgrip. Withstands six feet water immersion for 48 hours. Aluminum or stainless steel with silicone O-rings and gland. Stainless steel telescoping clamp screws. Meets environmental, electrical and mechanical requirements of AS85049 Category 1A Heavy Duty.

MATERIALS AND FINISHES

Adapters, elbows, follower, coupling nut: aluminum or stainless steel. See **How To Order** for material & finish options.

Hardware: stainless steel
Wire Mesh Cordgrip: stainless steel
Screws: stainless steel
Grommet, O-rings: fluorosilicone

ALTERNATE CONFIGURATION FOR LARGE CABLES

If the cable diameter exceeds the diameter of the backshell shown in the table at right, the backshell will be supplied with a **transition adapter**. The clamp and adapters are first installed over the cable jacket, and then are threaded onto the transition adapter. On straight exit backshells, the transition adapter does not affect the length. On 45° and 90° versions the transition adapter adds 1.00 inch (25.4mm) maximum to the backshell length.

Series 970 PowerTrip™ Connectors and Accessories

390PS086 EMI/RFI Submersible Backshell

390PS086 SUBMERSIBLE HEAVY DUTY BACKSHELL WITH WIRE MESH CORDGRIP

Heavy duty backshell fits Series 970 connectors and withstands MIL-S-901 grade A high impact shock. Splined connector interface. Terminate cable shield to inner and outer ground rings. Stainless steel wire mesh cordgrip provides strain relief to heavy duty power cables. Withstands six feet water immersion for 48 hours. Aluminum or stainless steel with silicone O-rings and cable gland. Meets environmental, electrical and mechanical requirements of MIL-DTL-28840.

MATERIALS AND FINISHES

Adapters, crimp rings, follower, coupling nut: aluminum or stainless steel. See table for finish options.

Hardware: stainless steel

Cable sealing gland, O-rings: silicone

Wire mesh cordgrip: stainless steel

Series 970 PowerTrip™ Connectors and Accessories

390PS036 EMI/RFI Submersible Backshell

390PS036 SUBMERSIBLE EMI/RFI BACKSHELL WITH SADDLE BAR CABLE CLAMP

Heavy duty backshell fits Series 970 connectors and withstands MIL-S-901 grade A high impact shock. Splined connector interface. Terminate cable shield to inner and outer ground rings. Heavy duty saddle bar cable clamp with telescoping stainless steel screws, lockwashers and lockwire holes. Meets AS85049/42 Class 1A requirements. Withstands six feet water immersion for 48 hours. Aluminum or stainless steel with silicone O-rings and cable gland. Meets environmental, electrical and mechanical requirements of MIL-DTL-28840.

MATERIALS AND FINISHES

Adapters, crimp rings, follower, coupling nut, cable clamp: aluminum or stainless steel. See Ordering Information for finish options.

Hardware: stainless steel

Cable sealing gland, O-rings: silicone

Wire mesh cordgrip: stainless steel

Series 970 PowerTrip™ Connectors and Accessories

930-014 Flange Mount Gaskets

930-014 FLANGE MOUNT GASKETS

Flange mount gaskets protect equipment from moisture ingress and contamination. Conductive gaskets reduce EMI problems. These die-cut elastomeric gaskets fit Series 970 square flange connectors.

About Fluorosilicone

Fluorosilicone (FVMQ) offers excellent resistance to hydrocarbons, oils, petroleum fuels and greases. Suitable for use with mineral-based hydraulic fluids. Continuous operating temperature -60°C to +175°C, +200°C intermittent. Meets MIL-DTL-25988.

About Conductive Fluorosilicone

High performance silver-filled fluorosilicone has excellent corrosion resistance in harsh environments. 90 dB plane wave shielding effectiveness at 10GHz, continuous operating temperature -55°C to +160°C, resistant to solvents and fuels. Material meets MIL-DTL-83528 Type D.

Series 970 PowerTrip™ Connectors and Accessories

Accessories

660PS097 & 098 Protective Covers

METAL PROTECTIVE COVERS

Metal covers protect unmated Series 970 connectors. Available with no attachment (see table below for part numbers), or choose sash chain, wire rope or nylon cord attachments from the ordering table on the following page.

Plug Cover

Receptacle Cover

ATTACHMENT OPTIONS	
Sash Chain	#8 sash chain, 300 series stainless steel, passivated. Glenair's most popular attachment option for circular connector covers.
Fluoropolymer Coated SST Wire Rope	Tough, flexible translucent FEP fluoropolymer® jacket over stainless steel, +200°C., resists weather, chemicals and abrasion. Glenair's best selling wire rope. 1/16 inch diameter uncoated, .09 inch (2.3 mm) finished diameter.
Black Nylon Cord	Black braided nylon cord. Very flexible, very good abrasion resistance, good chemical resistance. .120" (3mm) diameter. +125°C.

MATERIALS AND FINISHES	
Cover	Aluminum or Stainless Steel. See ordering information for finish options.
Gasket (Receptacle Cover)	Silicone
Rivet, Ring, Clevis	Stainless Steel

PROTECTIVE COVERS WITH NO ATTACHMENT (SEE NEXT PAGE FOR ATTACHMENT OPTIONS)

Quick Picks: A Guide to Glenair's Most Popular Materials and Finishes

Electroless Nickel

Cost	\$	\$	\$	\$	\$
Conductivity	+	+	+	+	+
Corrosion Resistance	⌚	⌚	⌚	⌚	⌚

-65 to +200°C

Glenair Code **M, ME**

Aluminum plated with electroless nickel offers excellent conductivity, wear resistance, and adequate corrosion resistance. Typically specified on electrical connectors and accessories used in avionics boxes, exoatmospheric equipment, and missiles, electroless nickel is a good choice when exposure to marine or corrosive atmospheres is not a primary concern. The plating process is purely chemical, and once started, is autocatalytic (it runs by itself).

Marine Bronze

Cost	\$	\$	\$	\$	\$
Conductivity	+	+	+	+	+
Corrosion Resistance	⌚	⌚	⌚	⌚	⌚

-65 to +200°C

Glenair Code **AB**

Marine bronze, an alloy of bronze, aluminum and nickel, is more resistant to the corrosive effects of seawater than ferrous alloys. Used on Glenair's GeoMarine connector coupling nuts, marine bronze is unplated and develops an aluminum oxide protective layer when exposed to air. Marine bronze connectors and accessories are found in shipboard and offshore drilling applications.

Black Zinc Nickel

Cost	\$	\$	\$	\$	\$
Conductivity	+	+	+	+	+
Corrosion Resistance	⌚	⌚	⌚	⌚	⌚

-65 to +175°C

Glenair Code **ZR**

RoHS-compliant black zinc-nickel is approved for MIL-DTL-38999, AS85049 and other major military specifications as a replacement for cadmium and hexavalent chromium platings. The non-reflective finish and good conductivity make the Glenair ZR finish a leading choice for cadmium-free tactical systems. Corrosion resistance is comparable to cadmium, and the ZR finish is backward-compatible with Cd-plated connectors and accessories.

Zinc-Nickel

Cost	\$	\$	\$	\$	\$
Conductivity	+	+	+	+	+
Corrosion Resistance	⌚	⌚	⌚	⌚	⌚

-65 to +175°C

Glenair Code **ZN, ZNU**

Recently added to MIL-DTL-38999 and MIL-DTL-83513, zinc-nickel plated aluminum has become a cost-effective alternative to cadmium. Available with olive drab or black chromate conversion coatings, zinc-nickel plated aluminum is commonly found on soldier systems and military airframe applications.

Cadmium

Cost	\$	\$	\$	\$	\$
Conductivity	+	+	+	+	+
Corrosion Resistance	⌚	⌚	⌚	⌚	⌚

-65 to +175°C

Glenair Code **NE, JF**

Cadmium plated aluminum has been the unchallenged workhorse of the defense/aerospace industry. Offering up to 1000 hours of salt spray protection when deposited over electroless nickel, cadmium is highly conductive, and provides good lubricity and resistance to galling. As plated, cadmium has a silvery appearance. A subsequent chromic acid passivation bath creates a chromate topcoat over the cadmium, enhancing corrosion protection. Olive drab chromate is widely used, followed by gold chromate and clear chromate.

Stainless Steel

Cost	\$	\$	\$	\$	\$
Conductivity	+	+	+	+	+
Corrosion Resistance	⌚	⌚	⌚	⌚	⌚

-65 to +200°C

Glenair Code **Z1, ZL, ZW**

Stainless steel offers unbeatable strength and protection from environmental stress if durability and corrosion resistance are more important than cost and weight. Typically found on aircraft engines, landing gear, geophysical equipment, armored vehicles and marine applications, passivated stainless steel is widely specified in throughout the interconnect industry. Also offered with nickel and cadmium plating for improved conductivity, stainless steel is an obvious alternative to cadmium if cost and weight are not an issue.

Quick Picks: A Guide to Glenair's Most Popular Materials and Finishes

Black Anodize

Cost	\$	\$	\$	\$	\$
Conductivity	+	+	+	+	+
Corrosion Resistance	⌚	⌚	⌚	⌚	⌚

-65 to +175°C

Glenair Code **C**

Black anodized aluminum is a popular finish for electrical connectors and accessories. Typically employed when conductivity is not required, black anodized aluminum offers a modicum of corrosion protection and is relatively inexpensive. Anodizing is an electrolytic process that creates aluminum oxide films by oxidizing the base metal. The resulting coating is much harder and denser than natural oxidation. The parts are immersed in a sulfuric acid solution at room temperature. After anodizing, the parts are dyed black.

Chem Film

Cost	\$	\$	\$	\$	\$
Conductivity	+	+	+	+	+
Corrosion Resistance	⌚	⌚	⌚	⌚	⌚

-65 to +175°C

Glenair Code **E**

Not Compliant

Chem Film is Glenair's standard chem film finish. Plated IAW MIL-DTL-5541, Class 3, Chem Film is a relatively inexpensive, moderately durable barrier plating. This chemical conversion coating is intended for use as a corrosion preventative film for electrical and electronic applications where lower resistant contacts, relative to Class 1A coatings, and anodic coatings in accordance with Mil-A-8625, are required.

Zinc-Cobalt

Cost	\$	\$	\$	\$	\$
Conductivity	+	+	+	+	+
Corrosion Resistance	⌚	⌚	⌚	⌚	⌚

-65 to +175°C

Glenair Code **UC, UCR, ZC, ZCR**

Zinc-cobalt with olive drab chromate topcoat fills the need for a RoHS compliant conductive NF olive drab finish for military vehicles, robots and other land system equipment.

AlumiPlateSM

Cost	\$	\$	\$	\$	\$
Conductivity	+	+	+	+	+
Corrosion Resistance	⌚	⌚	⌚	⌚	⌚

-65 to +175°C

Glenair Code **AL, XAL**

AlumiPlate provides excellent conductivity and corrosion resistance. 99.99% pure aluminum is electrolytically deposited onto aluminum or composite in a specialized water-free process, followed by a trivalent chromate conversion coating. AlumiPlate has been approved by Boeing and Lockheed as a replacement for cadmium. AlumiPlate has been added to MIL-DTL-38999 and MIL-DTL-83513. Threaded parts require dry lube to prevent galling. AlumiPlate is a service mark of AlumiPlate Incorporated, Minneapolis, Minnesota.

Nickel-PTFE

Cost	\$	\$	\$	\$	\$
Conductivity	+	+	+	+	+
Corrosion Resistance	⌚	⌚	⌚	⌚	⌚

-65 to +175°C

Glenair Code **MT, ZMT**

Now approved for MIL-DTL-38999 and MIL-DTL-83513, Glenair's 1000 Hour Grey™ meets the need for a cadmium replacement with excellent conductivity, wear resistance and corrosion protection. This extremely durable finish is gun-metal gray. A proprietary preliminary undercoat is followed with a composite coating of electroless nickel phosphorus and polytetra-fluoroethylene (PTFE). An organic topcoat provides sealing and added resistance to SO₂ salt fog. Ni-PTFE is approved for the Joint Strike Fighter and offers extremely good lubricity.

Hardcoat Anodize

Cost	\$	\$	\$	\$	\$
Conductivity	+	+	+	+	+
Corrosion Resistance	⌚	⌚	⌚	⌚	⌚

-65 to +200°C

Glenair Code **G2**

Hardcoat anodized aluminum offers greater wear resistance and better corrosion resistance compared to conventional anodizing. Typically employed when conductivity is not required, hardcoat aluminum offers good corrosion protection for marine and tactical applications. The resulting finish is a matte greenish-gray color. Hardcoat anodizing is an electrolytic process that creates aluminum oxide films by oxidizing the base metal in a sulfuric acid solution. The parts are immersed in a sulfuric acid solution at cold temperature. After anodizing, the parts can be dyed black (code GB).

Why Choose **GLENAIR?**

Plenty of Raw Materials!

*Outstanding
Customer Service!*

Abundant Machining Capacity!

In-House Assembly!

Huge "Same-Day" Inventory!

*One of North America's
and Machining*

High-Production Injection
Molding Equipment

State-of-the-Art Plating Capabilities

The Industry's Most Experienced
EMI/RFI Braided Shielding Specialists

Largest CNC Milling
Installations

Clean Rooms for Filter Array and Printed
Circuit Board Assembly

Out of This World
**INTERCONNECT
SOLUTIONS**
