

## U2J Dielectric, 10 – 50 VDC (Commercial & Automotive Grade)

### Overview

KEMET's U2J dielectric features a maximum operating temperature of 125°C and is considered stable. The Electronics Industries Alliance (EIA) characterizes U2J dielectric as a Class I material. Components of this classification are temperature compensating and are suited for resonant circuit applications or those where Q and stability of capacitance characteristics are required. U2J is an extremely stable dielectric material that exhibits a negligible shift in capacitance with respect to voltage and boasts a predictable and linear change in capacitance with reference to ambient temperature with no aging effect. In addition, U2J dielectric extends the available capacitance range of Class I MLCCs to achieve values previously only available using Class II dielectric materials like X7R, X5R, Y5V and Z5U.

U2J is not sensitive to DC Bias as compared to Class II dielectric materials and retains over 99% of nominal capacitance at full rated voltage. KEMET automotive grade series capacitors meet the demanding Automotive Electronics Council's AEC-Q200 qualification requirements. Capacitance change is limited to  $-750 \pm 120$  ppm/°C from -55°C to +125°C. These devices are Lead-free, RoHS and REACH compliant without exception and are capable of withstanding multiple passes through a Lead-free solder reflow profile.

### Benefits

- AEC-Q200 automotive qualified
- Low dissipation factor  $DF < 0.1\%$
- Low noise solution similar to C0G
- Low ESR and ESL
- High thermal stability
- High ripple current capability
- Preferred capacitance solution at line frequencies and into the MHz range
- Retains over 99% of nominal capacitance at full rated voltage

### Ordering Information

| C       | 1206                                         | C                                  | 104                                       | J                                                                                   | 3                                    | J          | A                    | C                               | TU                                                  |

| 13" Reel/Unmarked/2mm pitch <sup>2</sup>  | 3191                                                                                    |

<sup>1</sup> Default packaging is "Bulk Bag". An ordering code C-Spec is not required for "Bulk Bag" packaging.

<sup>1</sup> The terms "Marked" and "Unmarked" pertain to laser marking option of capacitors. All packaging options labeled as "Unmarked" will contain capacitors that have not been laser marked. The option to laser mark is not available on these devices. For more information see "Capacitor Marking".

<sup>2</sup> The 2 mm pitch option allows for double the packaging quantity of capacitors on a given reel size. This option is limited to EIA 0603 (1608 metric) case size devices. For more information regarding 2 mm pitch option see "Tape & Reel Packaging Information".

<sup>3</sup> Reeling tape options (paper or plastic) are dependent on capacitor case size (l" x w") and thickness dimensions. See "Chip Thickness/Tape & Reel Packaging Quantities" and "Tape & Reel Packaging Information".

<sup>3</sup> For additional information regarding "AUTO" C-Spec options, see "Automotive C-Spec Information".

<sup>3</sup> All automotive packaging C-Specs listed exclude the option to laser mark components. The option to laser mark is not available on these devices. For more information see "Capacitor Marking".

## Benefits cont'd

- Small predictable and linear capacitance change with respect to temperature
- Operating temperature range of -55°C to +125°C
- Capacitance up to 470 nF
- DC voltage ratings up to 50 V
- Lead (Pb)-free, RoHS and REACH compliant
- Non-polar device, minimizing installation concerns
- 100% pure matte Tin-plated termination finish allowing for excellent solderability

## Applications

Typical applications include critical timing, tuning, circuits requiring low loss, circuits with pulse, high current, decoupling, bypass, filtering, transient voltage suppression and blocking, as well as energy storage in critical and safety relevant circuits without (integrated) current limitation, including those subject to high levels of board flexure or temperature cycling.

---

## Qualification/Certification

Commercial Grade products are subject to internal qualification. Details regarding test methods and conditions are referenced in Table 4, Performance and Reliability.

Automotive Grade products meet or exceed the requirements outlined by the Automotive Electronics Council. Details regarding test methods and conditions are referenced in the document AEC-Q200, Stress Test Qualification for Passive Components. For additional information regarding the Automotive Electronics Council and AEC-Q200, please visit their website at [www.aecouncil.com](http://www.aecouncil.com).

---

## Environmental Compliance

Lead (Pb)-free, RoHS, and REACH compliant without exemptions.

## Automotive C-Spec Information

KEMET Automotive Grade products meet or exceed the requirements outlined by the Automotive Electronics Council. Details regarding test methods and conditions are referenced in document AEC-Q200, Stress Test Qualification for Passive Components. These products are supported by a Product Change Notification (PCN) and Production Part Approval Process warrant (PPAP).

Automotive products offered through our distribution channel have been assigned an inclusive ordering code C-Spec, "AUTO". This C-Spec was developed in order to better serve small and medium sized companies that prefer an automotive grade component without the requirement to submit a customer Source Controlled Drawing (SCD) or specification for review by a KEMET engineering specialist. This C-Spec is therefore not intended for use by KEMET's OEM Automotive customers and are not granted the same "privileges" as other automotive C-Specs. Customer PCN approval and PPAP request levels are limited (see details below).

### Product Change Notification (PCN)

The KEMET Product Change Notification system is used to communicate primarily the following types of changes:

- Product/process changes that affect product form, fit, function, and/or reliability
- Changes in manufacturing site
- Product obsolescence

| KEMET Automotive C-Spec     | Customer Notification due to:    |               | Days prior to implementation |
|-----------------------------|----------------------------------|---------------|------------------------------|
|                             | Process/Product change           | Obsolescence* |                              |
| KEMET assigned <sup>1</sup> | Yes (with approval and sign off) | Yes           | 180 days Minimum             |
| AUTO                        | Yes (without approval)           | Yes           | 90 days Minimum              |

<sup>1</sup> KEMET assigned C-Specs require the submittal of a customer SCD or customer specification for review. For additional information contact KEMET.

### Production Part Approval Process (PPAP)

The purpose of the Production Part Approval Process is:

- To ensure that supplier can meet the manufacturability and quality requirements for the purchased parts.
- To provide the evidence that all customer engineering design record and specification requirements are properly understood and fulfilled by the manufacturing organization.
- To demonstrate that the established manufacturing process has the potential to produce the part

| KEMET Automotive C-Spec     | PPAP (Product Part Approval Process) Level |   |   |   |   |
|-----------------------------|--------------------------------------------|---|---|---|---|
|                             | 1                                          | 2 | 3 | 4 | 5 |
| KEMET assigned <sup>1</sup> | ●                                          | ● | ● | ● | ● |
| AUTO                        | ○                                          |   | ○ |   |   |

<sup>1</sup> KEMET assigned C-Specs require the submittal of a customer SCD or customer specification for review. For additional information contact KEMET.

- Part Number specific PPAP available
- Product family PPAP only

## Dimensions – Millimeters (Inches)

| EIA Size Code | Metric Size Code | L Length                   | W Width                     | T Thickness               | B Bandwidth                | S Separation Minimum | Mounting Technique           |

| 1206          | 3216             | 3.20 (0.126) ±0.20 (0.008) | 1.60 (0.063) ±0.20 (0.008)  |                           | 0.50 (0.02) ±0.25 (0.010)  | N/A                  |                              |
| 1210          | 3225             | 3.20 (0.126) ±0.20 (0.008) | 2.50 (0.098) ±0.20 (0.008)  |                           | 0.50 (0.02) ±0.25 (0.010)  |                      | Solder reflow only           |
| 1812          | 4532             | 4.50 (0.177) ±0.30 (0.012) | 3.20 (0.126) ±0.30 (0.012)  |                           | 0.60 (0.024) ±0.35 (0.014) |                      |                              |

## Electrical Parameters/Characteristics

| Item                                                               | Parameters/Characteristics                                                               |
|--------------------------------------------------------------------|------------------------------------------------------------------------------------------|
| Operating Temperature Range                                        | -55°C to +125°C                                                                          |
| Capacitance Change with Reference to +25°C and 0 VDC Applied (TCC) | -750 ±120 ppm/°C                                                                         |
| Aging Rate (Maximum % Capacitance Loss/Decade Hour)                | 0.1%                                                                                     |
| Dielectric Withstanding Voltage (DWV)                              | 250% of rated voltage<br>(5 ±1 seconds and charge/discharge not exceeding 50 mA)         |
| Dissipation Factor (DF) Maximum Limit at 25°C                      | 0.1%                                                                                     |
| Insulation Resistance (IR) Limit at 25°C                           | 1,000 megohm microfarads or 100 GΩ<br>(Rated voltage applied for 120 ±5 seconds at 25°C) |

To obtain IR limit, divide MΩ-μF value by the capacitance and compare to GΩ limit. Select the lower of the two limits.

Capacitance and dissipation factor (DF) measured under the following conditions:

1 MHz ±100 kHz and 1.0 Vrms ±0.2 V if capacitance ≤ 1,000 pF

1 kHz ±50 Hz and 1.0 Vrms ±0.2 V if capacitance > 1,000 pF

Note: When measuring capacitance it is important to ensure the set voltage level is held constant. The HP4284 and Agilent E4980 have a feature known as Automatic Level Control (ALC). The ALC feature should be switched to "ON."

<sup>1</sup> The "Packaging C-Spec" is a 4 to 8 digit code which identifies the packaging type and/or product grade. When ordering, the proper code must be included in the 15th through 22nd character positions of the ordering code. See "Ordering Information" section of this document for further details. Commercial Grade product ordered without a packaging C-Spec will default to our standard "Bulk Bag" packaging. Contact KEMET if you require a bulk bag packaging option for Automotive Grade products.

<sup>2</sup> A packaging C-Spec (see note 1 above) is not required for "Bulk Bag" packaging (excluding Anti-Static Bulk Bag and Automotive Grade products). The 15th through 22nd character positions of the ordering code should be left blank. All product ordered without a packaging C-Spec will default to our standard "Bulk Bag" packaging.

**Table 3 – Chip Capacitor Land Pattern Design Recommendations per IPC–7351**

| EIA Size Code     | Metric Size Code | Density Level A:<br>Maximum (Most)<br>Land Protrusion (mm) |      |      |      |      | Density Level B:<br>Median (Nominal)<br>Land Protrusion (mm) |      |      |      |      | Density Level C:<br>Minimum (Least)<br>Land Protrusion (mm) |      |      |      |      |

| 1210 <sup>1</sup> | 3225             | 1.50                                                       | 1.60 | 2.90 | 5.60 | 3.90 | 1.40                                                         | 1.40 | 2.80 | 4.70 | 3.30 | 1.30                                                        | 1.20 | 2.70 | 4.00 | 3.00 |
| 1812              | 4532             | 2.15                                                       | 1.60 | 3.60 | 6.90 | 4.60 | 2.05                                                         | 1.40 | 3.50 | 6.00 | 4.00 | 1.95                                                        | 1.20 | 3.40 | 5.30 | 3.70 |

<sup>1</sup> Only for capacitance values  $\geq 22 \mu\text{F}$

**Density Level A:** For low-density product applications. Recommended for wave solder applications and provides a wider process window for reflow solder processes. KEMET only recommends wave soldering of EIA 0603, 0805 and 1206 case sizes.

**Density Level B:** For products with a moderate level of component density. Provides a robust solder attachment condition for reflow solder processes.

**Density Level C:** For high component density product applications. Before adapting the minimum land pattern variations the user should perform qualification testing based on the conditions outlined in IPC Standard 7351 (IPC–7351).

Image below based on Density Level B for an EIA 1210 case size.

## Soldering Process

### Recommended Soldering Technique:

- Solder wave or solder reflow for EIA case sizes 0603, 0805 and 1206
- All other EIA case sizes are limited to solder reflow only

### Recommended Reflow Soldering Profile:

KEMET's families of surface mount multilayer ceramic capacitors (SMD MLCCs) are compatible with wave (single or dual), convection, IR or vapor phase reflow techniques. Preheating of these components is recommended to avoid extreme thermal stress. KEMET's recommended profile conditions for convection and IR reflow reflect the profile conditions of the IPC/J-STD-020 standard for moisture sensitivity testing. These devices can safely withstand a maximum of three reflow passes at these conditions.

| Profile Feature                                       | Termination Finish |                    |
|-------------------------------------------------------|--------------------|--------------------|
|                                                       | SnPb               | 100% Matte Sn      |
| <b>Preheat/Soak</b>                                   |                    |                    |
| Temperature Minimum ( $T_{Smin}$ )                    | 100°C              | 150°C              |
| Temperature Maximum ( $T_{Smax}$ )                    | 150°C              | 200°C              |
| Time ( $t_s$ ) from $T_{Smin}$ to $T_{Smax}$          | 60 – 120 seconds   | 60 – 120 seconds   |
| Ramp-Up Rate ( $T_L$ to $T_P$ )                       | 3°C/second maximum | 3°C/second maximum |
| Liquidous Temperature ( $T_L$ )                       | 183°C              | 217°C              |
| Time Above Liquidous ( $t_L$ )                        | 60 – 150 seconds   | 60 – 150 seconds   |
| Peak Temperature ( $T_P$ )                            | 235°C              | 260°C              |
| Time Within 5°C of Maximum Peak Temperature ( $t_p$ ) | 20 seconds maximum | 30 seconds maximum |
| Ramp-Down Rate ( $T_P$ to $T_L$ )                     | 6°C/second maximum | 6°C/second maximum |
| Time 25°C to Peak Temperature                         | 6 minutes maximum  | 8 minutes maximum  |

Note 1: All temperatures refer to the center of the package, measured on the capacitor body surface that is facing up during assembly reflow.

**Table 4 – Performance & Reliability: Test Methods and Conditions**

| Stress                 | Reference                       | Test or Inspection Method                                                                                                                                                                                                                            |                        |                |

## Storage and Handling

Ceramic chip capacitors should be stored in normal working environments. While the chips themselves are quite robust in other environments, solderability will be degraded by exposure to high temperatures, high humidity, corrosive atmospheres, and long term storage. In addition, packaging materials will be degraded by high temperature – reels may soften or warp and tape peel force may increase. KEMET recommends that maximum storage temperature not exceed 40°C and maximum storage humidity not exceed 70% relative humidity. Temperature fluctuations should be minimized to avoid condensation on the parts and atmospheres should be free of chlorine and sulfur bearing compounds. For optimized solderability chip stock should be used promptly, preferably within 1.5 years of receipt.

## Construction

## Capacitor Marking (Optional):

Laser marking option is not available on:

- C0G, U2J, Ultra Stable X8R, and Y5V dielectric devices
- EIA 0402 case size devices
- EIA 0603 case size devices with Flexible Termination option.
- KPS Commercial and Automotive grade stacked devices.

These capacitors are supplied unmarked only.

## Tape & Reel Packaging Information

KEMET offers multilayer ceramic chip capacitors packaged in 8, 12 and 16 mm tape on 7" and 13" reels in accordance with EIA Standard 481. This packaging system is compatible with all tape-fed automatic pick and place systems. See Table 2 for details on reeling quantities for commercial chips.

**Table 5 – Carrier Tape Configuration, Embossed Plastic & Punched Paper (mm)**

| EIA Case Size     | Tape Size (W)* | Embossed Plastic         |          | Punched Paper            |          |

### New 2 mm Pitch Reel Options\*

| Packaging Ordering Code (C-Spec) | Packaging Type/Options             |
|----------------------------------|------------------------------------|
| C-3190                           | Automotive grade 7" reel unmarked  |
| C-3191                           | Automotive grade 13" reel unmarked |
| C-7081                           | Commercial grade 7" reel unmarked  |
| C-7082                           | Commercial grade 13" reel unmarked |

\* 2 mm pitch reel only available for 0603 EIA case size.

2 mm pitch reel for 0805 EIA case size under development.

### Benefits of Changing from 4 mm to 2 mm Pitching Spacing

- Lower placement costs
- Double the parts on each reel results in fewer reel changes and increased efficiency
- Fewer reels result in lower packaging, shipping and storage costs, reducing waste

\*Refer to Figures 1 and 2 for W and P<sub>1</sub> carrier tape reference locations.

\*Refer to Tables 6 and 7 for tolerance specifications.

Technical drawing of a tape reel showing dimensions and labels. The drawing includes a side view on the left and a top view on the right. Key dimensions and labels include:

- Side View Dimensions:**
  - $T$ : Total thickness of the tape.
  - $T_2$ : Thickness of the top layer.
  - $B_1$ : Width of the tape.
  - $K_0$ : Thickness of the core.
  - $S_1$ : Thickness of the cover tape.
  - $T_1$ : Thickness of the bottom layer.
- Top View Dimensions:**
  - $\varnothing D_0$ : Outer diameter of the reel.
  - $P_0$ : Pitch of the holes.
  - $[10 \text{ pitches cumulative tolerance on tape } \pm 0.2 \text{ mm}]$ : Tolerance specification for the pitch.
  - $E_1$ : Total width of the reel.
  - $E_2$ : Width of the tape.
  - $F$ : Distance from the center line to the edge of the tape.
  - $A_0$ : Width of the tape.
  - $B_0$ : Width of the tape.
  - $P_1$ : Pitch of the holes.
  - $\varnothing D_1$ : Inner diameter of the reel.
- Labels:**
  - Center Lines of Cavity
  - Cover Tape
  - Embossment For cavity size, see Note 1 Table 4
  - User Direction of Unreeling (indicated by an arrow pointing right)
- Notes:**
  - $B_1$  is for tape feeder reference only, including draft concentric about  $B_0$ .

1. The embossment hole location shall be measured from the sprocket hole controlling the location of the embossment. Dimensions of embossment location and hole location shall be applied independent of each other.
2. The tape with or without components shall pass around R without damage (see Figure 6).
3. If  $S_1 < 1.0$  mm, there may not be enough area for cover tape to be properly applied (see EIA Standard 481 paragraph 4.3 section b).
4.  $B_1$  dimension is a reference dimension for tape feeder clearance only.
5. The cavity defined by  $A_0$ ,  $B_0$  and  $K_0$  shall surround the component with sufficient clearance that:
  - (a) the component does not protrude above the top surface of the carrier tape.
  - (b) the component can be removed from the cavity in a vertical direction without mechanical restriction, after the top cover tape has been removed.
  - (c) rotation of the component is limited to 20° maximum for 8 and 12 mm tapes and 10° maximum for 16 mm tapes (see Figure 3).
  - (d) lateral movement of the component is restricted to 0.5 mm maximum for 8 and 12 mm wide tape and to 1.0 mm maximum for 16 mm tape (see Figure 4).
  - (e) for KPS Series product,  $A_0$  and  $B_0$  are measured on a plane 0.3 mm above the bottom of the pocket.
  - (f) see Addendum in EIA Standard 481 for standards relating to more precise taping requirements.

- The cavity defined by  $A_0$ ,  $B_0$  and  $T$  shall surround the component with sufficient clearance that:
  - the component does not protrude beyond either surface of the carrier tape.
  - the component can be removed from the cavity in a vertical direction without mechanical restriction, after the top cover tape has been removed.
  - rotation of the component is limited to 20° maximum (see Figure 3).
  - lateral movement of the component is restricted to 0.5 mm maximum (see Figure 4).
  - see Addendum in EIA Standard 481 for standards relating to more precise taping requirements.
- The tape with or without components shall pass around R without damage (see Figure 6).

## Packaging Information Performance Notes

- 1. Cover Tape Break Force:** 1.0 kg minimum.
- 2. Cover Tape Peel Strength:** The total peel strength of the cover tape from the carrier tape shall be:

| Tape Width   | Peel Strength                    |
|--------------|----------------------------------|
| 8 mm         | 0.1 to 1.0 Newton (10 to 100 gf) |
| 12 and 16 mm | 0.1 to 1.3 Newton (10 to 130 gf) |

The direction of the pull shall be opposite the direction of the carrier tape travel. The pull angle of the carrier tape shall be 165° to 180° from the plane of the carrier tape. During peeling, the carrier and/or cover tape shall be pulled at a velocity of 300 ±10 mm/minute.

- 3. Labeling:** Bar code labeling (standard or custom) shall be on the side of the reel opposite the sprocket holes. Refer to EIA Standards 556 and 624.

All Information given herein is believed to be accurate and reliable, but it is presented without guarantee, warranty, or responsibility of any kind, expressed or implied.

Statements of suitability for certain applications are based on KEMET Electronics Corporation's ("KEMET") knowledge of typical operating conditions for such applications, but are not intended to constitute – and KEMET specifically disclaims – any warranty concerning suitability for a specific customer application or use. The Information is intended for use only by customers who have the requisite experience and capability to determine the correct products for their application. Any technical advice inferred from this Information or otherwise provided by KEMET with reference to the use of KEMET's products is given gratis, and KEMET assumes no obligation or liability for the advice given or results obtained.

Although KEMET designs and manufactures its products to the most stringent quality and safety standards, given the current state of the art, isolated component failures may still occur. Accordingly, customer applications which require a high degree of reliability or safety should employ suitable designs or other safeguards (such as installation of protective circuitry or redundancies) in order to ensure that the failure of an electrical component does not result in a risk of personal injury or property damage.

Although all product-related warnings, cautions and notes must be observed, the customer should not assume that all safety measures are indicated or that other measures may not be required.

## X-ON Electronics

Largest Supplier of Electrical and Electronic Components
