## **NTE4000 & NTE4000T Integrated Circuit CMOS, Dual 3-Input NOR Gate Plus Inverter**

### **Description:**

The NTE4000 (14-Lead DIP) and NTE4000T (SOIC-14) are dual 3-input NOR gate plus inverter devices constructed with MOS P-Channel and N-Channel enhancement mode devices in a single monolithic structure. These complementary MOS logic gates find primary use where low power dissipation and/or high noise immunity is desired.

### **Features:**

- Diode Protection on All Inputs
- Supply Voltage Range: 3Vdc to 18Vdc
- Logic Swing Independent of Fanout

### **Absolute Maximum Ratings:** (Voltages referenced to V<sub>SS</sub>, Note 1)

|   |                                  |
|---|----------------------------------|
| DC Supply Voltage, V <sub>DD</sub> .....                            | -0.5 to +18.0V                   |
| Input Voltage (DC or Transient), V <sub>in</sub> .....              | -0.5 to V <sub>DD</sub> to +0.5V |
| Output Voltage (DC or Transient), V <sub>out</sub> .....            | -0.5 to V <sub>DD</sub> to +0.5V |
| Input Current (DC or Transient, Per Pin), I <sub>in</sub> .....     | ±10mA                            |
| Output Current (DC or Transient, Per Pin), I <sub>out</sub> .....   | ±10mA                            |
| Power Dissipation (Per Package), P <sub>D</sub> .....               | 500mW                            |
| Temperature Derating (from +65° to +125°C) .....                    | -7.0mW/°C                        |
| Storage Temperature, T <sub>stg</sub> .....                         | -65° to +150°C                   |
| Lead Temperature (During Soldering, 8sec max), T <sub>L</sub> ..... | +260°C                           |

Note 1. Maximum Ratings are those values beyond which damage to the device may occur.

**Electrical Characteristics:** (Voltages referenced to V<sub>SS</sub>, Note 2)

| Parameter   | Symbol          | V <sub>DD</sub><br>Vdc | −55°C   |       | +25°C |          |       | +125°C |       | Unit |      |
|---|-----------------|------------------------|---|-------|-------|----------|-------|--------|-------|------|------|

Note 2. Data labeled "Typ" is not to be used for design purposes but is intended as an indication of the device's potential performance.

Note 3. The formulas given are for the typical characteristics only at +25°C.

Note 4. To calculate total supply current at loads other than 50pF:

$$I_T(C_L) = I_T(50\text{pF}) + (C_L - 50) V_{fk}$$

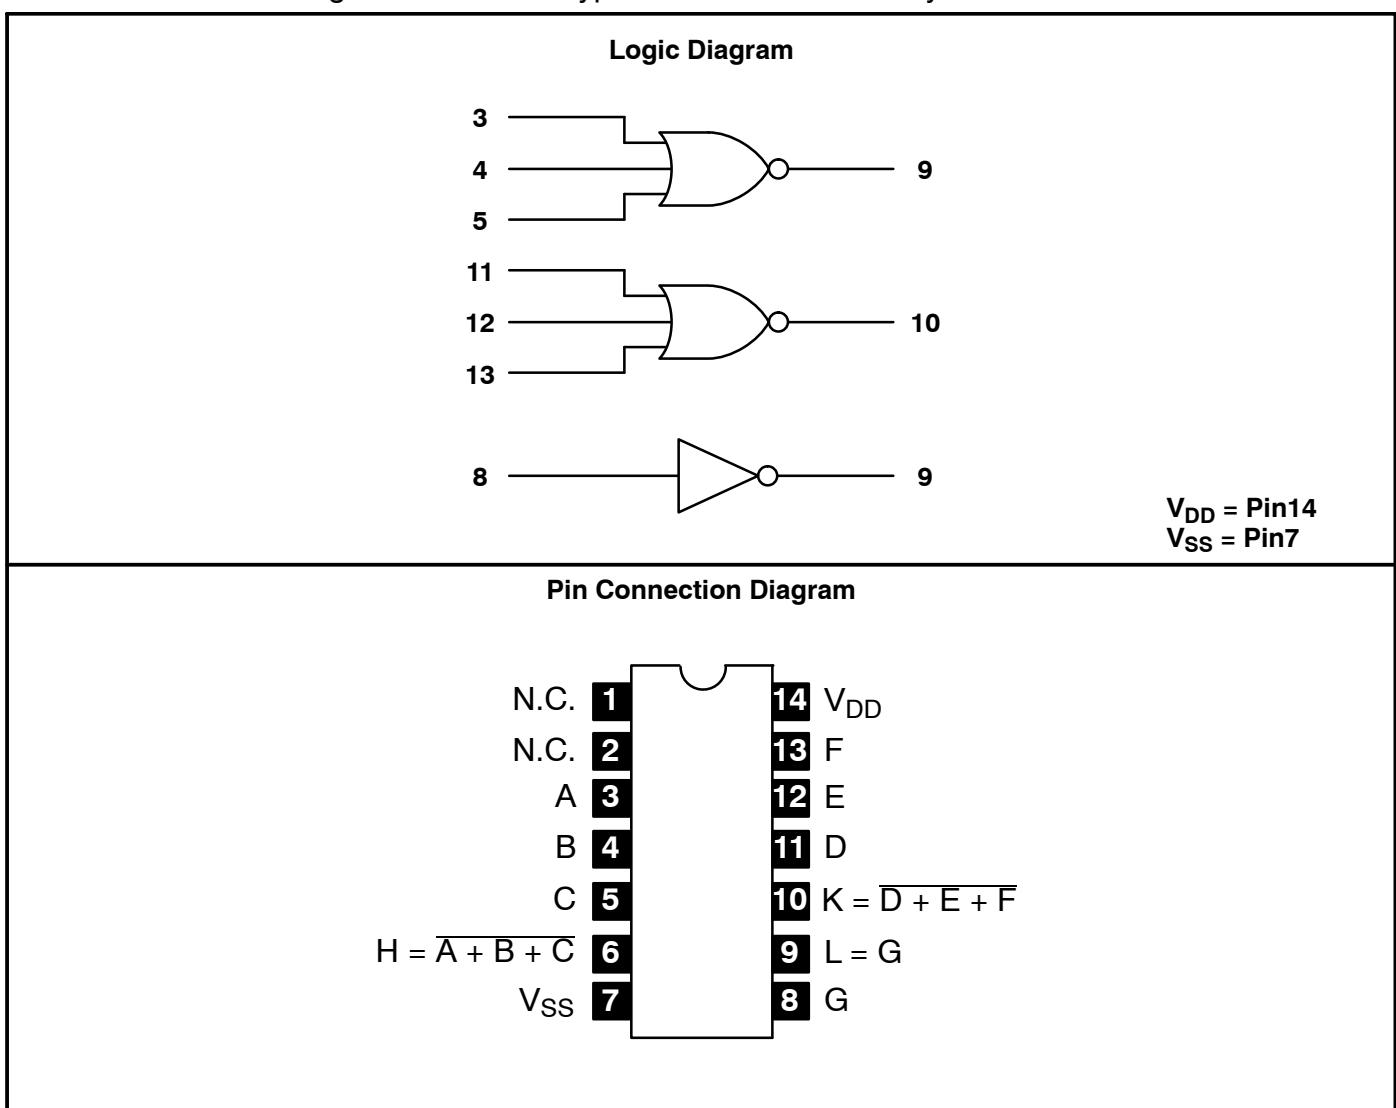

where: I<sub>T</sub> is in μA (per package), C<sub>L</sub> in pF, V = (V<sub>DD</sub> − V<sub>SS</sub>) in volts, f in kHz is input frequency, and k = 0.001 × the number of exercised gates per package.

**Switching Characteristics:** ( $C_L = 50\text{pF}$ ,  $T_A = +25^\circ\text{C}$ , Note 2)
