Do not use or store the product at places subject to direct sunlight, places exposed to outdoor environment, or places with high sea breezes.
2. Do not use the product in dusty environment.
3. Do not use or store the product at places exposed to water or oil. Do not use the product in a wet state. Entry of water may result in short-circuiting.
4. Do not use the product in environments with strong static electricity. Application of static electricity may damage the product. Take measures against static electricity when handling the product. (Example: Earthing the human body, etc.)
5. Do not use the product in environments with strong electromagnetic waves. This may cause the display pressure to fluctuate.
6. Do not use the product beyond the power supply voltage range.
7. Pay attention to incorrect wiring, such as the polarity of the power supply.
8. Do not use the product under corrosive or combustible gases.
9. Do not set up the product with a high voltage line or power line.
10. Install the sensor while ensuring that it does not come into direct contact with ultrasonic vibrations.
11. Use within rated pressure.
If pressure exceeding the rating is applied, the internal element may break.
12. Connect the piping while ensuring that the symbols (+, -) of the pressure port are correct. (+: Plus pressure port, -: Minus pressure port)
13. This product is a precision instrument. Do not drop it or apply an impact to it. If this happens, all of the product functions may not be exhibited.
14. Do not pull the cables or apply force. Pulling the cables by applying a force exceeding 50 N may result in disconnection and breakage.
15. If oil in the compressor or moisture in the air is likely to accumulate as water droplets in the pressure receiving section of the pressure sensor, the element may be destroyed. Insert an air filter and remove the moisture and oil.
16. Do not turn OFF the power supply in setting mode. If the power supply is turned OFF, data may not be saved properly.
17. Once the supply voltage is stopped, do not turn ON the power again with the remaining voltage as 0.3 V or more. This could result in malfunctioning.
