

# NCV7349

## High Speed Low Power CAN Transceiver

### Description

The NCV7349 CAN transceiver is the interface between a controller area network (CAN) protocol controller and the physical bus. The transceiver provides differential transmit capability to the bus and differential receive capability to the CAN controller.

The NCV7349 is a new addition to the CAN high-speed transceiver family complementing NCV734x CAN family and previous generations of CAN transceivers such as AMIS42665, AMIS3066x, etc.

Due to the wide common-mode voltage range of the receiver inputs and other design features, the NCV7349 is able to reach outstanding levels of electromagnetic susceptibility (EMS). Similarly, very low electromagnetic emission (EME) is achieved by the excellent matching of the output signals.

### Features

- Compatible with the ISO 11898-5 Standard
- High Speed (up to 1 Mbps)
- V<sub>IO</sub> Pin on NCV7349-3 Version Allowing Direct Interfacing with 3 V to 5 V Microcontrollers
- Very Low Current Standby Mode with Wake-up via the Bus
- Low Electromagnetic Emission (EME) and Extremely High Electromagnetic Immunity
- Very Low EME without Common-mode (CM) Choke
- No Disturbance of the Bus Lines with an Un-powered Node
- Transmit Data (TxD) Dominant Time-out Function
- Under All Supply Conditions the Chip Behaves Predictably
- Very High ESD Robustness of Bus Pins, >10 kV System ESD Pulses
- Thermal Protection
- Bus Pins Short Circuit Proof to Supply Voltage and Ground
- Bus Pins Protected Against Transients in an Automotive
- These are Pb-Free Devices

### Quality

- NCV Prefix for Automotive and Other Applications Requiring Unique Site and Control Change Requirements; AEC-Q100 Qualified and PPAP Capable

### Typical Applications

- Automotive
- Industrial Networks

### PIN ASSIGNMENT

### ORDERING INFORMATION

See detailed ordering and shipping information in the package dimensions section on page 10 of this data sheet.

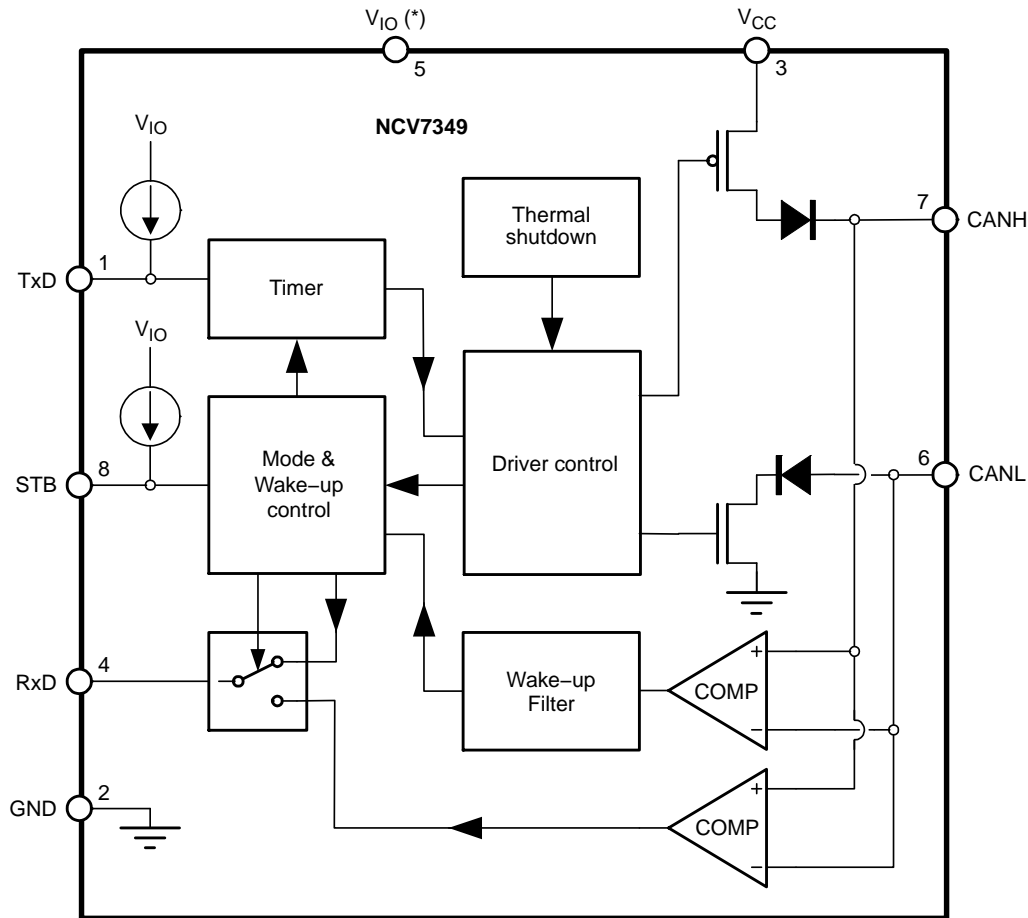

Table 1. KEY TECHNICAL CHARACTERISTICS AND OPERATING RANGES

Symbol	Parameter	Conditions	Min	Max	Unit
$V_{CC}$	Power supply voltage	(Note 1)	4.75 (4.5)	5.25 (5.5)	V
$V_{UV}$	Undervoltage detection voltage on pin $V_{CC}$		2	4	V
$V_{CANH}$	DC voltage at pin CANH	$0 < V_{CC} < 5.5$ V; no time limit	-50	+50	V
$V_{CANL}$	DC voltage at pin CANL	$0 < V_{CC} < 5.5$ V; no time limit	-50	+50	V
$V_{CANH,Lmax}$	DC voltage at pin CANH and CANL during load dump condition	$0 < V_{CC} < 5.5$ V, less than one second	-	+58	V
$V_{ESD}$	Electrostatic discharge voltage	IEC 61000-4-2 at pins CANH and CANL	-15	15	kV
$V_{O(dif)(bus\_dom)}$	Differential bus output voltage in dominant state	$45\ \Omega < R_{LT} < 65\ \Omega$	1.5	3	V
CM-range	Input common-mode range for comparator	Guaranteed differential receiver threshold and leakage current	-35	+35	V
$C_{load}$	Load capacitance on IC outputs		-	15	pF
$t_{pd0}$	Propagation delay (NCV7349-0 version)	See Figure 7	-	245	ns
$t_{pd3}$	Propagation delay (NCV7349-3 version)	See Figure 7	-	250	ns
$T_J$	Junction temperature		-40	150	°C

Functional operation above the stresses listed in the Recommended Operating Ranges is not implied. Extended exposure to stresses beyond the Recommended Operating Ranges limits may affect device reliability.

1. In the range of 4.5 V to 4.75 V and from 5.25 V to 5.5 V the chip is fully functional; some parameters may be outside of the specification.

### BLOCK DIAGRAM

\*On NCV7349-0 version pin 5 is not connected.  $V_{IO}$  supply is provided by  $V_{CC}$ .

# NCV7349

## TYPICAL APPLICATION

Figure 2. Application Diagram, NCV7349-0

Figure 3. Application Diagram, NCV7349-3

Table 2. PIN FUNCTION DESCRIPTION

Pin	Name	Description
1	TxD	Transmit data input; low input → Driving dominant on bus; internal pull-up current
2	GND	Ground
3	V <sub>CC</sub>	Supply voltage
4	RxD	Receive data output; bus in dominant → low output
5	NC	Not connected. On NCV7349-0 only.
5	V <sub>IO</sub>	Input / Output pins supply voltage. On NCV7349-3 only
6	CANL	Low-level CAN bus line (low in dominant mode)
7	CANH	High-level CAN bus line (high in dominant mode)
8	STB	Standby mode control input; internal pull-up current

## FUNCTIONAL DESCRIPTION

NCV7349 has two versions which differ from each other only by function of pin 5.

**NCV7349-0:** Pin 5 is not connected. (see Figure 2)

**NCV7349-3:** Pin 5 is  $V_{IO}$  pin, which is supply pin for transceiver digital inputs/output (supplying pins TxD, RxD, STB). The  $V_{IO}$  pin should be connected to microcontroller supply pin. By using  $V_{IO}$  supply pin shared with microcontroller the I/O levels between microcontroller and transceiver are properly adjusted. This adjustment allows in applications with microcontroller supply down to 3 V to easy communicate with the transceiver. (See Figure 3)

### Operating Modes

NCV7349 provides two modes of operation as illustrated in Table 3. These modes are selectable through pin STB.

**Table 3. OPERATING MODES**

Pin STB	Mode	Pin RxD	
		Low	High
Low	Normal	Bus dominant	Bus recessive
High	Standby	Wake-up request detected	No wake-up request detected

### Normal Mode

In the normal mode, the transceiver is able to communicate via the bus lines. The signals are transmitted and received to the CAN controller via the pins TxD and RxD. The slopes on the bus lines outputs are optimized to give low EME.

### Standby Mode

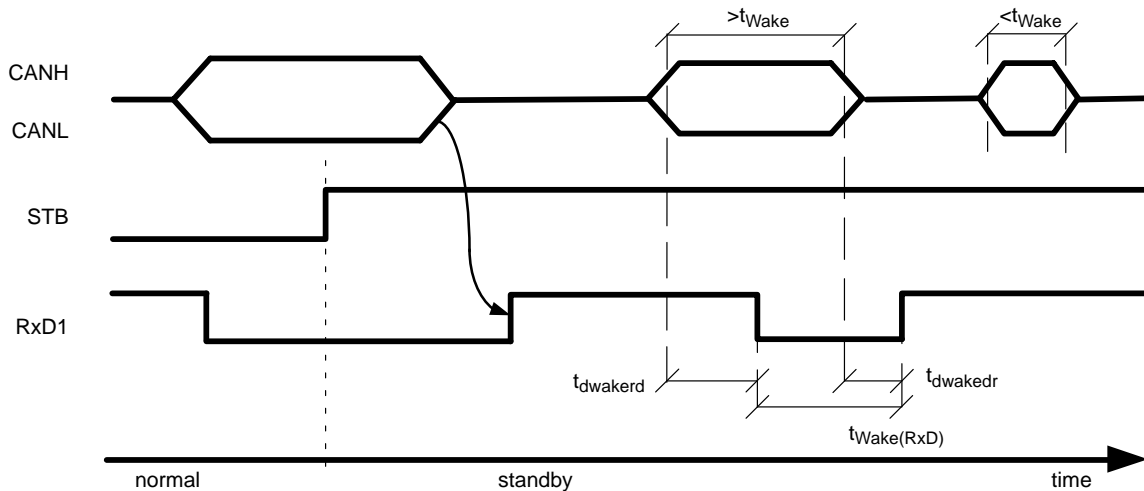

In standby mode both the transmitter and receiver are disabled and a very low-power differential receiver monitors the bus lines for CAN bus activity. The bus lines are terminated to ground and supply current is reduced to a minimum, typically 10  $\mu$ A. When a wake-up request is detected by the low-power differential receiver, the signal is first filtered and then verified as a valid wake signal after a time period of  $t_{wake}$ , the RxD pin is driven low by the transceiver to inform the controller of the wake-up request.

### $V_{IO}$ Supply pin

The  $V_{IO}$  pin available only on NCV7349-3 version should be connected to microcontroller supply pin. By using  $V_{IO}$  supply pin shared with microcontroller the I/O levels between microcontroller and transceiver are properly adjusted. See Figure 3. Pin  $V_{IO}$  on NCV7349-3 does not provide the internal supply voltage for low-power differential receiver of the transceiver. Detection of wake-up request is not possible when there is no supply voltage on pin  $V_{CC}$ .

### Wake-up

When a valid wake-up (dominant state longer than  $t_{wake}$ ) is received during the standby mode the RxD pin is driven low. The wake-up detection is not latched: RxD returns to High state after  $t_{dwakedr}$  when the bus signal is released back to recessive – see Figure 4.

**Figure 4. NCV7349 Wake-up Behavior**

**Over-temperature Detection**

A thermal protection circuit protects the IC from damage by switching off the transmitter if the junction temperature exceeds a value of approximately 170°C. Because the transmitter dissipates most of the power, the power dissipation and temperature of the IC is reduced. All other IC functions continue to operate. The transmitter off-state resets when the temperature decreases below the shutdown threshold and pin TxD goes high. The thermal protection circuit is particularly needed when a bus line short circuits.

**TxD Dominant Time-out Function**

A TxD dominant time-out timer circuit prevents the bus lines being driven to a permanent dominant state (blocking all network communication) if pin TxD is forced permanently low by a hardware and/or software application failure. The timer is triggered by a negative edge on pin TxD. If the duration of the low-level on pin TxD exceeds the internal timer value  $t_{\text{dom(TxD)}}$ , the transmitter is disabled, driving the bus into a recessive state. The timer is reset by a positive edge on pin TxD.

This TxD dominant time-out time ( $t_{\text{dom(TxD)}}$ ) defines the minimum possible bit rate to 15 kbps.

**Fail Safe Features**

A current-limiting circuit protects the transmitter output stage from damage caused by accidental short circuit to either positive or negative supply voltage, although power dissipation increases during this fault condition.

Undervoltage on  $V_{\text{CC}}$  pin prevents the chip sending data on the bus when there is not enough  $V_{\text{CC}}$  supply voltage. After supply is recovered TxD pin must be first released to high to allow sending dominant bits again. Recovery time from undervoltage detection is equal to  $t_{\text{d(stb-nm)}}$  time.

$V_{\text{IO}}$  supply dropping below  $V_{\text{UVDVIO}}$  undervoltage detection level will cause the transmitter to disengage from the bus (no bus loading) until the  $V_{\text{IO}}$  voltage recovers (NCV7349-3 version only).

The pins CANH and CANL are protected from automotive electrical transients (according to ISO 7637; see Figure 7). Pins TxD and STB are pulled high internally should the input become disconnected. Pins TxD, STB and RxD will be floating, preventing reverse supply should the  $V_{\text{IO}}$  supply be removed.

## ELECTRICAL CHARACTERISTICS

## Definitions

All voltages are referenced to GND (pin 2). Positive currents flow into the IC. Sinking current means the current is flowing into the pin; sourcing current means the current is flowing out of the pin.

## ABSOLUTE MAXIMUM RATINGS

Table 4. ABSOLUTE MAXIMUM RATINGS

Symbol	Parameter	Conditions	Min.	Max.	Unit
V <sub>SUP</sub>	Supply voltage V <sub>CC</sub> , V <sub>IO</sub>		−0.3	+6	V
V <sub>CANH</sub>	DC voltage at pin CANH	0 < V <sub>CC</sub> < 5.5 V; no time limit	−50	+50	V
V <sub>CANL</sub>	DC voltage at pin CANL	0 < V <sub>CC</sub> < 5.5 V; no time limit	−50	+50	V
V <sub>IO</sub>	DC voltage at pin TxD, RxD, STB		−0.3	6	V
V <sub>esd</sub>	Electrostatic discharge voltage at all pins	(Note 2) (Note 3)	−6 500	6 500	kV V
	Electrostatic discharge voltage at CANH and CANL pins	(Note 4)	−10	10	kV
V <sub>schaft</sub>	Transient voltage	(Note 5)	−150	100	V
Latch-up	Static latch-up at all pins	(Note 6)		150	mA
T <sub>stg</sub>	Storage temperature		−55	+150	°C
T <sub>A</sub>	Ambient temperature		−40	+125	°C
T <sub>J</sub>	Maximum junction temperature		−40	+170	°C

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

- Standardized human body model electrostatic discharge (ESD) pulses in accordance to EIA-JESD22. Equivalent to discharging a 100 pF capacitor through a 1.5 kΩ resistor.
- Standardized charged device model ESD pulses when tested according to ESD-STM5.3.1-1999.
- System human body model electrostatic discharge (ESD) pulses. Equivalent to discharging a 150 pF capacitor through a 330 Ω resistor referenced to GND.
- Pulses 1, 2a, 3a and 3b according to ISO 7637 part 3. Indicative values based on structural similarity to NCV7340 where results were verified by external test house.
- Static latch-up immunity: Static latch-up protection level when tested according to EIA/JESD78.

Table 5. THERMAL CHARACTERISTICS

Symbol	Parameter	Conditions	Value	Unit
R <sub>θJA_1</sub>	Thermal Resistance Junction-to-Air, 1S0P PCB (Note 7)	Free air	125	K/W
R <sub>θJA_2</sub>	Thermal Resistance Junction-to-Air, 2S2P PCB (Note 8)	Free air	75	K/W

- Test board according to EIA/JEDEC Standard JESD51-3, signal layer with 10% trace coverage
- Test board according to EIA/JEDEC Standard JESD51-7, signal layers with 10% trace coverage

## ELECTRICAL CHARACTERISTICS

**Table 6. CHARACTERISTICS** ( $V_{CC} = 4.75\text{ V to }5.25\text{ V}$ ;  $V_{IO} = 2.8\text{ V to }5.5\text{ V}$  (NCV7349-3 only);  $T_J = -40\text{ to }+150^\circ\text{C}$ ;  $R_{LT} = 60\ \Omega$  unless specified otherwise. On chip versions without  $V_{IO}$  pin, reference voltage for all digital inputs and outputs is  $V_{CC}$  instead of  $V_{IO}$ .)

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
<b>SUPPLY (Pin <math>V_{CC}</math>)</b>

1. DIMENSIONING AND TOLERANCING PER ASME Y14.5M, 1994.
2. CONTROLLING DIMENSION: MILLIMETERS.
3. DIMENSION b DOES NOT INCLUDE DAMBAR PROTRUSION. ALLOWABLE PROTRUSION SHALL BE 0.004 mm IN EXCESS OF MAXIMUM MATERIAL CONDITION.
4. DIMENSION D DOES NOT INCLUDE MOLD FLASH, PROTRUSIONS OR GATE BURRS. MOLD FLASH, PROTRUSIONS OR GATE BURRS SHALL NOT EXCEED 0.006 mm PER SIDE. DIMENSION E1 DOES NOT INCLUDE INTERLEAD FLASH OR PROTRUSION. INTERLEAD FLASH OR PROTRUSION SHALL NOT EXCEED 0.010 mm PER SIDE.
5. THE PACKAGE TOP MAY BE SMALLER THAN THE PACKAGE BOTTOM. DIMENSIONS D AND E1 ARE DETERMINED AT THE OUTERMOST EXTREMES OF THE PLASTIC BODY AT DATUM H.
6. DIMENSIONS A AND B ARE TO BE DETERMINED AT DATUM H.
7. DIMENSIONS b AND c APPLY TO THE FLAT SECTION OF THE LEAD BETWEEN 0.10 TO 0.25 FROM THE LEAD TIP.
8. A1 IS DEFINED AS THE VERTICAL DISTANCE FROM THE SEATING PLANE TO THE LOWEST POINT ON THE PACKAGE BODY.

DIM	MILLIMETERS	
	MIN	MAX
A	---	1.75
A1	0.10	0.25
A2	1.25	---
b	0.31	0.51
c	0.10	0.25
D	4.90 BSC	
E	6.00 BSC	
E1	3.90 BSC	
e	1.27 BSC	
h	0.25	0.41
L	0.40	1.27
L2	0.25 BSC	

### RECOMMENDED SOLDERING FOOTPRINT\*

\*For additional information on our Pb-Free strategy and soldering details, please download the ON Semiconductor Soldering and Mounting Techniques Reference Manual, SOLDERRM/D.

### GENERIC MARKING DIAGRAM\*

XXXXX = Specific Device Code  
A = Assembly Location  
L = Wafer Lot  
Y = Year  
W = Work Week  
▪ = Pb-Free Package

\*This information is generic. Please refer to device data sheet for actual part marking. Pb-Free indicator, "G", may or not be present.

DOCUMENT NUMBER:	98AON34918E	Electronic versions are uncontrolled except when accessed directly from the Document Repository. Printed versions are uncontrolled except when stamped "CONTROLLED COPY" in red.
DESCRIPTION:	SOIC-8	PAGE 1 OF 1

ON Semiconductor and are trademarks of Semiconductor Components Industries, LLC dba ON Semiconductor or its subsidiaries in the United States and/or other countries. ON Semiconductor reserves the right to make changes without further notice to any products herein. ON Semiconductor makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does ON Semiconductor assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. ON Semiconductor does not convey any license under its patent rights nor the rights of others.

**onsemi**, **Onsemi**, and other names, marks, and brands are registered and/or common law trademarks of Semiconductor Components Industries, LLC dba "**onsemi**" or its affiliates and/or subsidiaries in the United States and/or other countries. **onsemi** owns the rights to a number of patents, trademarks, copyrights, trade secrets, and other intellectual property. A listing of **onsemi**'s product/patent coverage may be accessed at [www.onsemi.com/site/pdf/Patent-Marking.pdf](http://www.onsemi.com/site/pdf/Patent-Marking.pdf). **onsemi** reserves the right to make changes at any time to any products or information herein, without notice. The information herein is provided "as-is" and **onsemi** makes no warranty, representation or guarantee regarding the accuracy of the information, product features, availability, functionality, or suitability of its products for any particular purpose, nor does **onsemi** assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. Buyer is responsible for its products and applications using **onsemi** products, including compliance with all laws, regulations and safety requirements or standards, regardless of any support or applications information provided by **onsemi**. "Typical" parameters which may be provided in **onsemi** data sheets and/or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals" must be validated for each customer application by customer's technical experts. **onsemi** does not convey any license under any of its intellectual property rights nor the rights of others. **onsemi** products are not designed, intended, or authorized for use as a critical component in life support systems or any FDA Class 3 medical devices or medical devices with a same or similar classification in a foreign jurisdiction or any devices intended for implantation in the human body. Should Buyer purchase or use **onsemi** products for any such unintended or unauthorized application, Buyer shall indemnify and hold **onsemi** and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that **onsemi** was negligent regarding the design or manufacture of the part. **onsemi** is an Equal Opportunity/Affirmative Action Employer.
