TeSys™ island

Island Concept

TeSys island is an innovative digital load management solution—providing data for higher machine efficiency and ease of servicing, and allowing faster time to market.

TeSys island is a modular, multifunctional system providing integrated functions inside an automation architecture, primarily for the direct control and management of low-voltage loads. After commissioning, TeSys island can switch, help protect, and manage motors and other electrical loads up to 37 kW installed in an electrical control panel.

This system is designed around the concept of TeSys avatars. These avatars:

- are the functional object representing a logical function of the physical module with pre-defined logic
- determine the configuration of the island.

The logical aspects of the island are managed with software tools, covering all phases of product and application lifecycle: design, engineering, commissioning, operation, and maintenance.

- | | |
|----------------------------|--------------------------|
| ① Bus Coupler | ⑤ Power interface module |
| ② Analog I/O module | ⑥ Standard Starter |
| ③ Digital I/O module | ⑦ SIL Starter |
| ④ Voltage interface module | ⑧ SIL interface module |

The physical island consists of a set of devices installed on a single DIN rail controlling loads, monitoring data, diagnostics information and connected together with a ribbon cable providing the internal communication between modules.

The external communication with the automation environment is made via a single coupler module, and the island is seen as a single node on the network. The other modules include starters, power interface modules, analog and digital I/O modules, voltage interface modules, and SIL interface modules, covering a wide range of operational functions.

Avatar descriptions and applications

Avatars			Functions	
ID	Name	Description	Electrical & load protection & control	SIL Stop function ⁽¹⁾
A001	Pump	To manage a pump	●	
A002	Conveyor One Direction	To manage a conveyor in one direction	●	
A003	Conveyor One Direction - SIL Stop, W. Cat 1/2 ⁽¹⁾	To manage a conveyor in one direction, with SIL Stop function compliance for wiring category 1 and category 2	●	●
A004	Conveyor Two Directions	To manage a conveyor in two directions	●	
A005	Conveyor Two Directions - SIL Stop, W. Cat 1/2 ⁽¹⁾	To manage a conveyor in two directions, with SIL Stop function compliance for wiring category 1 and category 2	●	●
D001	Switch	To make or break a power line in an electrical circuit		
D002	Switch - SIL Stop, W. Cat 1/2 ⁽¹⁾	To make or break a power line in an electrical circuit with SIL Stop function compliance for wiring category 1 and category 2		●
D004	Digital I/O	To provide control of 2 digital outputs and status of 4 digital inputs		
D005	Analog I/O	To provide control of 1 analog output and status of 2 analog inputs		
D006	Switch - SIL Stop, W. Cat 3/4 ⁽¹⁾	To make or break a power line in an electrical circuit with SIL Stop function compliance for wiring category 3 and category 4		●
L001	Power Interface w/o I/O (measure)	To monitor current supplied to an external device, such as a solid-state relay, soft starter, or variable speed drive		
L002	Power Interface with I/O (control)	To monitor current supplied to and to control an external device, such as a solid-state relay, soft starter, or variable speed drive	●	
L003	Motor One Direction	To manage ⁽²⁾ a motor in one direction	●	
L004	Motor One Direction - SIL Stop, W. Cat 1/2 ⁽¹⁾	To manage a motor in one direction, with SIL Stop function compliance for wiring category 1 and category 2	●	●
L006	Motor Two Directions	To manage a motor in two directions (forward and reverse)	●	
L007	Motor Two Directions - SIL Stop, W. Cat 1/2 ⁽¹⁾	To manage a motor in two directions (forward and reverse), with SIL Stop function compliance for wiring category 1 and category 2	●	●
L009	Motor Y/D One Direction	To manage a wye/delta (star/delta) motor in one direction	●	
L010	Motor Y/D Two Directions	To manage a wye/delta (star/delta) motor in two directions (forward and reverse)	●	
L011	Motor Two Speeds	To manage a two-speed motor	●	
L012	Motor Two Speeds - SIL Stop, W. Cat 1/2 ⁽¹⁾	To manage a two-speed motor, with SIL Stop function compliance for wiring category 1 and category 2	●	●
L014	Motor Two Speeds Two Directions	To manage a two-speed motor in two directions (forward and reverse)	●	
L015	Motor Two Speeds Two Directions - SIL Stop, W. Cat 1/2 ⁽¹⁾	To manage a two-speed motor in two directions (forward and reverse), with SIL Stop function compliance for wiring category 1 and category 2	●	●
L017	Resistor	To manage a resistive load	●	
L018	Power Supply	To manage a power supply	●	
L019	Transformer	To manage a transformer	●	
L020	Motor One Direction - SIL Stop, W. Cat 3/4 ⁽¹⁾	To manage a motor in one direction, with SIL Stop function compliance for wiring category 3 and category 4	●	●
L021	Motor Two Directions SIL Stop, W. Cat 3/4 ⁽¹⁾	To manage a motor in two directions, with SIL Stop function compliance for wiring category 3 and category 4	●	●
L022	Motor Two Speed - SIL Stop, W. Cat 3/4 ⁽¹⁾	To manage a two-speed motor, with SIL Stop function compliance for wiring category 3 and category 4	●	●
L023	Motor Two Speeds Two Directions - SIL Stop, W. Cat 3/4 ⁽¹⁾	To manage a two-speed motor in two directions, with SIL Stop function compliance for wiring category 3 and category 4	●	●
S001	System avatar	A required avatar that enables a single point of communication to the island		

(1) Wiring Category 1, Category 2, Category 3 and Category 4 according to ISO 13849.

(2) "Manage" in this context encompasses energizing, controlling, monitoring, diagnosing, and protecting the load.

TeSys island Bus Couplers Introduction

Bus Couplers (BC), for communication between the modules and the PLC

TPRBCEIP

TPRBCPFN

TPRBCPFB

A Bus Coupler is always present in the island as the fieldbus communication interface. It controls all other modules of the island.

Main functions

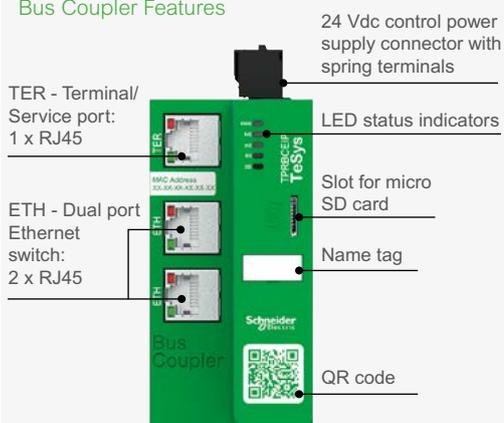

- Communicating with the PLC
- Managing the avatars and their associated modules
- Collecting operational status and diagnostic data from the island's modules
- Communicating with configuration, operation and maintenance digital tools
- Supplying the modules with control power.

The bus coupler is connected

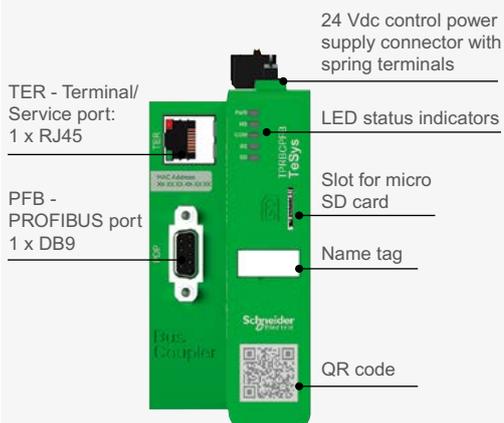

- Upstream to the fieldbus
- Downstream to the island devices with the ribbon cable
- Upstream to the control power supply
- Optionally, through its service port, to a programming tool working with EcoStruxure™ Machine Expert, a single software environment.

For TPRBCEIP and TPRBCPFN, the bus coupler service port and dual port Ethernet switch are located on the same network with the same IP address. All bus couplers are equipped with a micro SD card slot, to allow several upload and backup functions on a micro SD card.

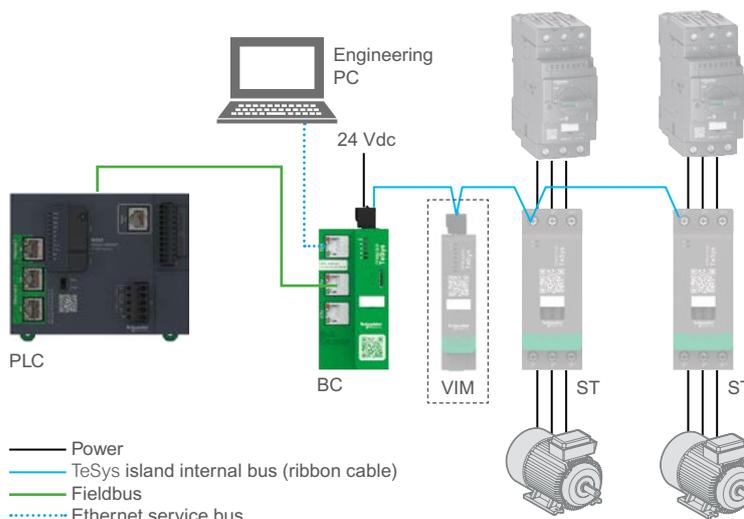

Bus Coupler Features

TeSys island Power Interface Modules Introduction

Power Interface Modules (PIMs) for electrical and thermal protection, digital asset management capabilities

A

B

C

TPRPM009 TPRPM038 TPRPM080

A PIM can be associated with an analog I/O device to measure temperature through an external sensor. A PIM can also monitor the current supplied to an external device.

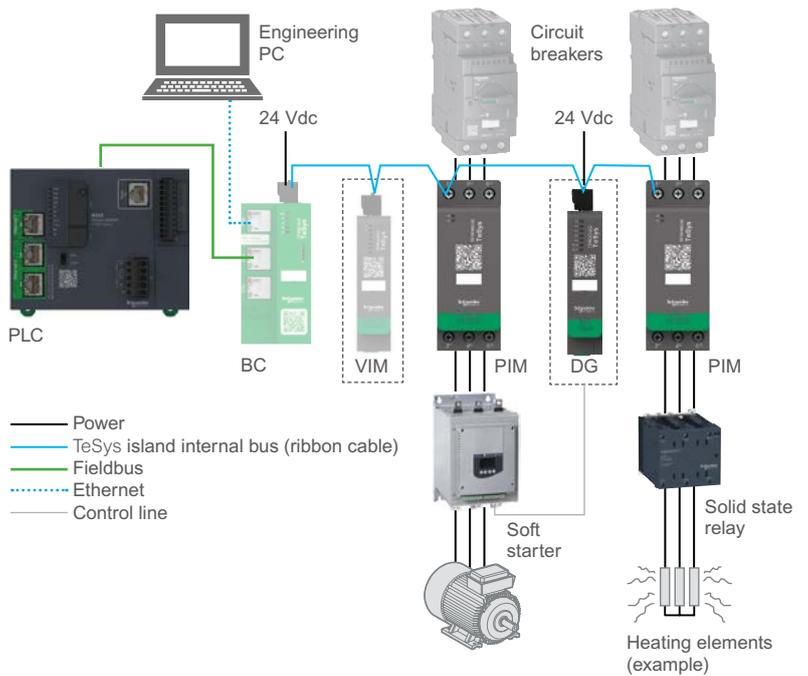

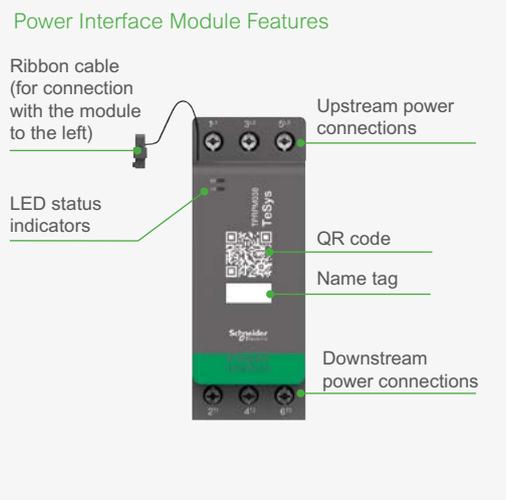

Main functions

- Measure downstream electrical data related to the load
- Provide energy monitoring data when a voltage interface module (VIM) is installed on the island.

The PIMs are connected

- Upstream to a circuit breaker
- Downstream to an external power device like a contactor, soft starter, or solid-state relay.

The PIM communicates with the bus coupler, sending operational data and receiving commands. In this example, a Digital I/O module (DG) is used to control the soft starter.

3-Pole PIM Power interface modules

TeSys island Standard Starters

Introduction

Standard Starters (ST), for load control

Standard starters provide load control, electrical and thermal protection functions, and digital asset management capabilities.

Main functions

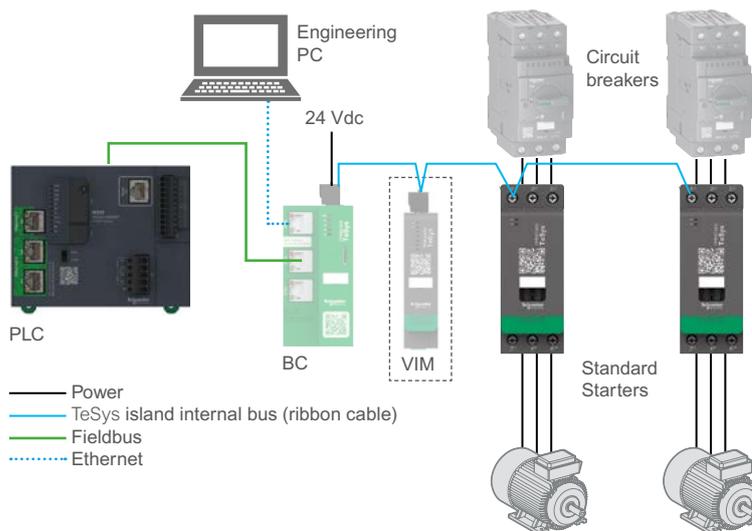

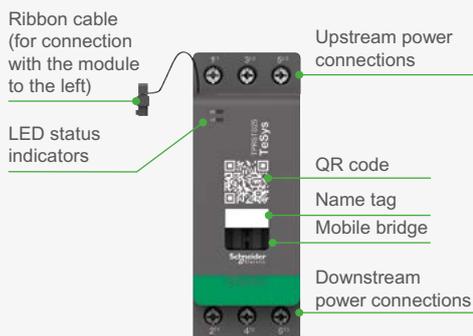

- Provide three/single phase On/Off power control for loads
- Advanced protection & alarming
- Electrical data measurement related to the load
- Energy monitoring when a voltage interface module (VIM) is installed on the island
- Functional testing and simulation
- Event logging and counters.

The standard starters are connected

- Upstream to a circuit breaker
- Downstream to the load to control.

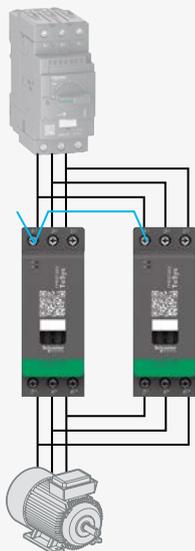

The starter communicates with the bus coupler, sending operational data and receiving commands.

Standard Starter Features

Reversing motor starter

Obtained by combining 2 standard starters and a cabling kit (See page 36)

3-Pole Standard Starters

TeSys island SIL Starters Introduction

SIL Starter (SS)

SIL starters provide similar functions as standard starters but are associated with a SIL interface module (SIM).

Main functions

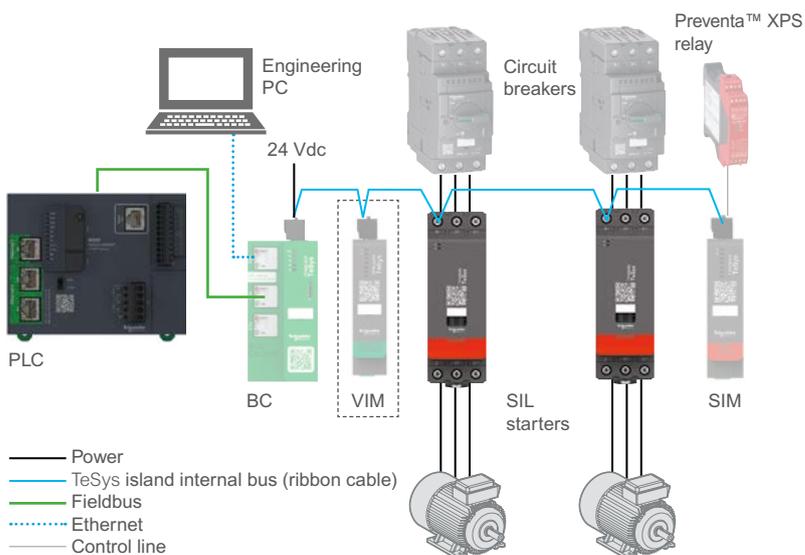

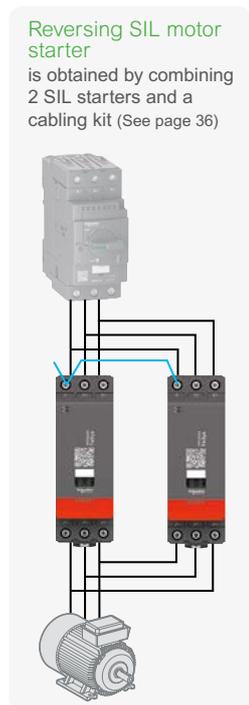

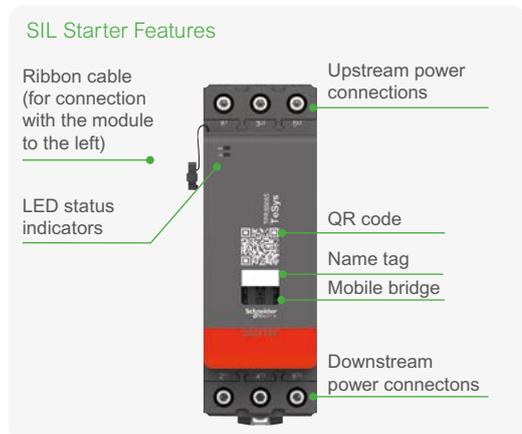

- Provide Stop Category 0 and Stop Category 1 according to EN/IEC 60204-1
- Provide three-phase/single-phase On/Off power control for loads
- Advanced protection & alarming
- Electrical data measurement related to the load
- Energy monitoring when a voltage interface module (VIM) is installed on the island
- Functional testing and simulation
- Event logging and counters.

Multiple SIL starters might be needed for a single TeSys™ avatar function. Avatars using SIL starters always include a SIL interface module.

The SIL starters are connected

- Upstream to a circuit breaker
- Downstream to the load to control
- To SIM module of the same group via the TeSys island internal bus (ribbon cable).

The SIL starter communicates with the bus coupler, sending operational data and receiving commands.

SIL Interface Module, to provide interface with SIL Starters

TPRSM001

A SIL interface module (SIM), associated with one or several SIL starters, allows the design of Stop functions in compliance with EN/IEC 60204-1:

- Stop Category 0: immediate machine power disconnection
- Stop Category 1: electrical power maintained on the machine actuators until the stop process fully ends (absence of motion).

Main functions

- Interface with a Preventa™ XPS relay
- Command the stop function of its SIL group of SIL starters.

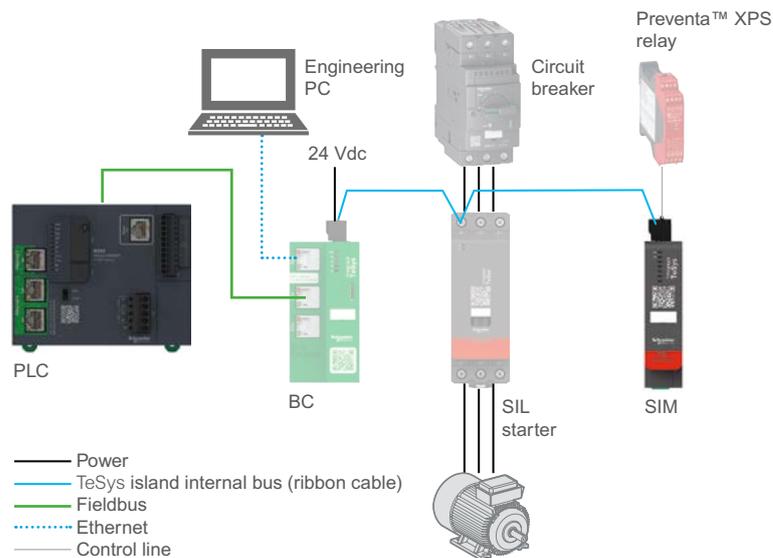

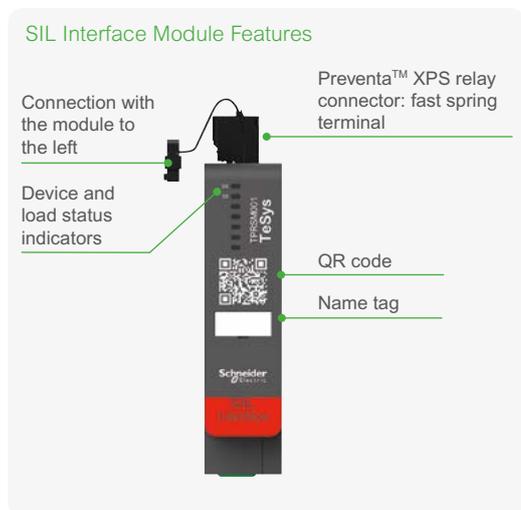

Several SIL groups of SIL starters can be set up on the island. Each is delimited by one SIM on the far side of the SIL starters.

The SIM is connected

- Upstream to a Preventa™ XPS relay
- To a SIL starter of the same SIL group via the TeSys island internal bus (ribbon cable).

The SIM communicates with the bus coupler, sending operational data.

The Stop function is achieved by pure electromechanical means without any digital communication or bus coupler involvement.

TeSys island Digital I/O module

Introduction

Digital I/O module (DG), monitors and delivers binary status

TPRDG4X2

Digital I/O modules are typically used to get data from sensors and to control devices.

Main functions

- Monitor binary sensors and switches via four 24 Vdc sink/source inputs. No isolation between inputs (share a common ground)
- Control devices like relays, signaling lights, or controller binary inputs via two 0.5 A, 24 Vdc transistor-type outputs. No isolation between outputs (share a common ground)
- Capture statistical operational data of the module:
 - Number of device power cycles
 - Number of device events detected
 - Time module is on
 - Perform I/O channel testing and simulation.

The digital I/O module is connected:

- Upstream to the 24 Vdc source needed to power the downstream actuators
- Input channel: downstream to a binary sensor or switch
- Output channel: downstream to the 24 Vdc input of the actuator

Actuators connected to the digital I/O module must be protected against short-circuits by external means like fuses. The output fuse should be a 0.5 A Type T fuse (215, 218, FLQ or FLSR series from Littelfuse supplier or equivalent), one per output.

The digital I/O module communicates with the bus coupler, sending operational data and receiving commands.

Digital I/O module Features

Digital I/O Wiring

TeSys island Analog I/O module Introduction

Analog I/O module (AN), monitors and delivers analog values

TPRAN2X1

Analog I/O modules are typically used to get data from sensors and to control devices.

Main functions

- Monitor RTD, Thermocouple (NI100, NI1000, PT100, PT1000, PTC binary, thermocouple type B, C, E, J, K, N, R, S, T), Voltage & Current analog readings (0–10V, -10...+10V, 0–20 mA, 4–20 mA) through 2 configurable inputs
- Control voltage & current output via 1 configurable analog output (0–10V, -10...+10V, 0–20 mA, 4–20 mA)
- Capture statistical operational data:
 - Number of device power cycles
 - Number of device events detected
 - Time module is on.

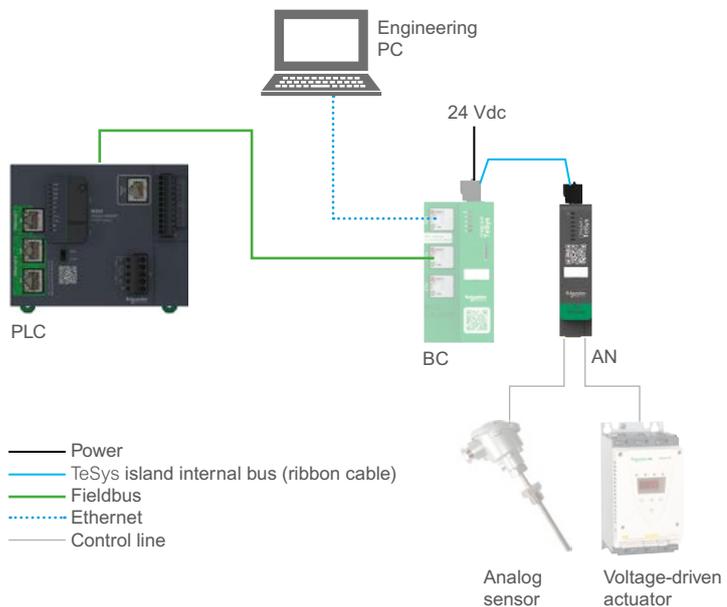

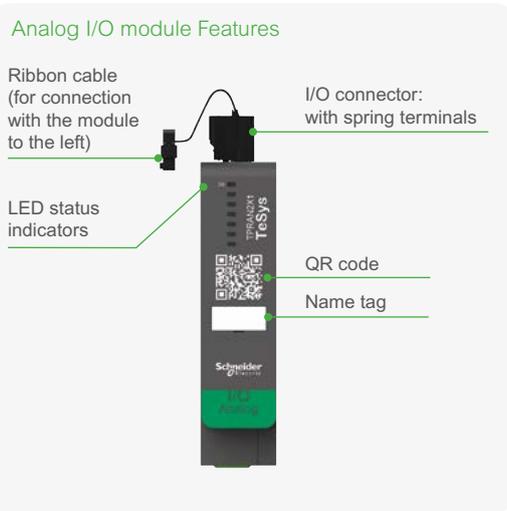

The analog I/O module is connected

- Input channel: downstream to an analog sensor or sensor transmitter
- Output channel: downstream to the control input of a voltage-driven actuator, such as a variable-speed drive

Devices connected to the outputs of the I/O module must be protected against short circuits by external means like fuses.

The analog I/O module communicates with the bus coupler, sending operational data and receiving commands.

Note: No per-channel LEDs are provided.

TeSys island Voltage Interface Module Introduction

Voltage Interface Module (VIM), for whole island monitoring

A

B

C

TPRVM001

The voltage interface module (VIM) enables voltage, power, and energy monitoring for the whole island.

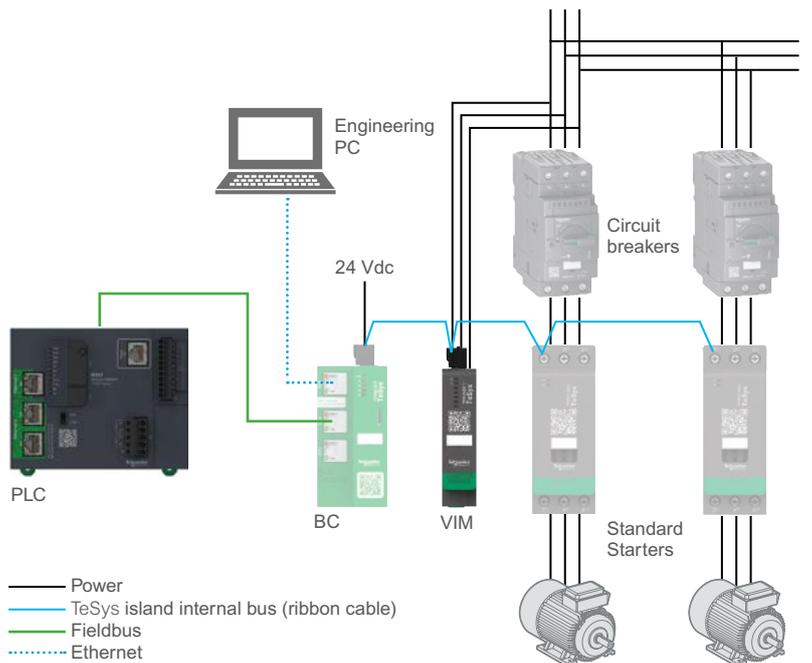

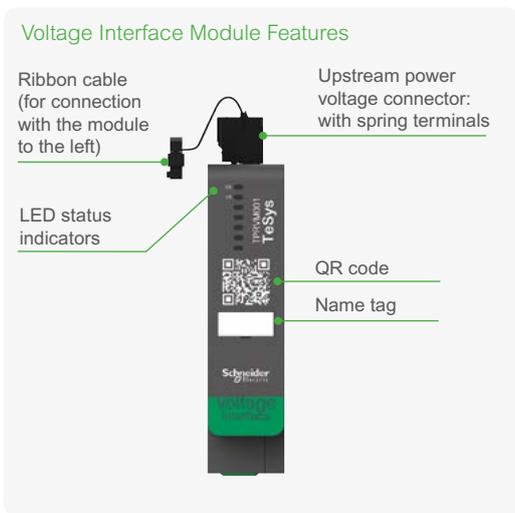

Main functions

- Measure single-phase and three-phase line voltages (47...63 Hz) at one connection point of the island
- Enable the monitoring of energy-related data at the island level
- Monitor voltage in single-phase systems L-N or L-L
- Monitor voltages in three-phase systems without neutral N connection
- Calculate RMS phase voltages, voltage phase sequence
- Monitor for fundamental frequency
- Identify the level and duration of dip and swell events.

The VIM is connected

- Upstream to the line voltages.

The VIM communicates with the bus coupler, sending operational data.

TeSys island assembly kits

Introduction

Assembly Kit for 2 speed or 2 direction avatars

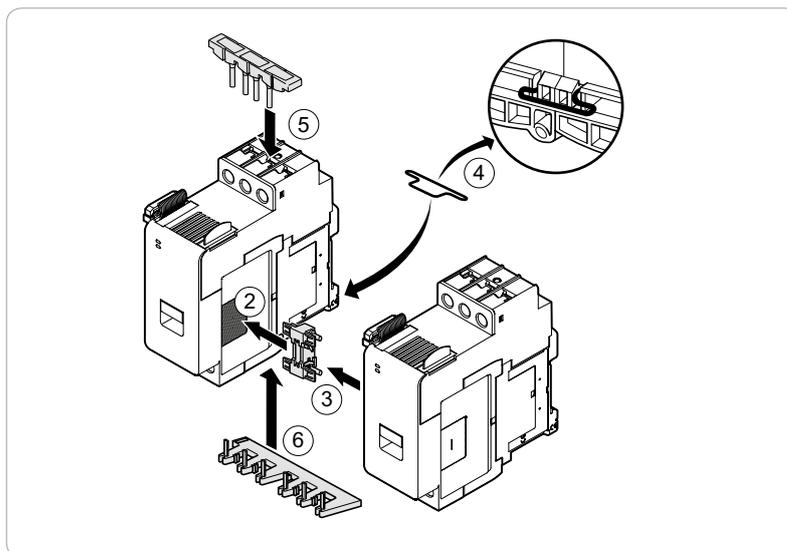

LAD9R1

LAD9R1

Kit is used to join adjacent 9-38 A (size 1 and 2) starters.

Composition:

- LAD9V2 - Mechanical interlock with assembly staple
- LAD9V5 - Parallel link between two starters
- LAD9V6 - Reversing link between two starters.

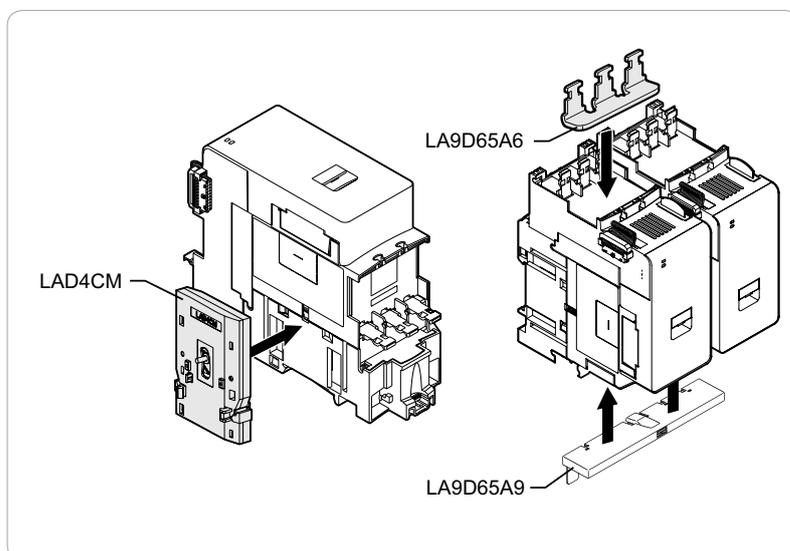

LAD9R3

LAD9R3

Kit is used to join adjacent 40-65 A (size 3) starters.

Composition:

- LAD4CM - Mechanical interlock
- LA9D65A6 - Parallel link between two starters
- LA9D65A9 - Reversing link between two starters.

Shorting blocks for Wye-Delta (Star-Delta) avatars

LAD9P3

LAD9P3

Is used for linking 3 poles of a 9-38 A (size 1 and 2) starter.

LAD9SD3S

LAD9SD3S

Is used for linking 3 poles of a 40-65 A (size 3) starter.

Instruction Sheet		
TeSys™ island Instruction Sheet: Bus Coupler TPRBCPFN	Describes how to install the TeSys™ island PROFINET Bus Coupler	MFR44098
TeSys™ island Instruction Sheet: Bus Coupler TPRBCPFB	Describes how to install the TeSys™ island PROFIBUS Bus Coupler	GDE55148
TeSys™ island Instruction Sheet: Bus Coupler TPRBCEIP	Describes how to install the TeSys™ island Modbus TCP Bus Coupler	MFR44097
TeSys™ island Instruction Sheet: Starters and Power Interface Modules Size 1 and 2	Describes how to install size 1 and 2 TeSys™ island starters and power interface modules	MFR77070
TeSys™ island Instruction Sheet: Starters and Power Interface Modules, Size 3	Describes how to install size 3 TeSys™ island starters and power interface modules	MFR77085
TeSys™ island Instruction Sheet: Input/Output Modules	Describes how to install the TeSys™ island analog and digital I/O modules	MFR44099
TeSys™ island Instruction Sheet: SIL Interface and Voltage Interface Modules	Describes how to install the TeSys™ island voltage interface modules and SIL interface modules	MFR44100

(1) Functional Safety according to EN 61508

Green Premium™

An industry leading portfolio of offers delivering sustainable value

More than 75% of our product sales offer superior transparency on the material content, regulatory information and environmental impact of our products:

- RoHS compliance
- REACH substance information
- Industry leading # of PEP's*
- Circularity instructions

Discover what we mean by green
[Check your products!](#)

The Green Premium program stands for our commitment to deliver customer valued sustainable performance. It has been upgraded with recognized environmental claims and extended to cover all offers including Products, Services and Solutions.

CO₂ and P&L impact through... Resource Performance

Green Premium brings improved resource efficiency throughout an asset's lifecycle. This includes efficient use of energy and natural resources, along with the minimization of CO₂ emissions.

Cost of ownership optimization through... Circular Performance

We're helping our customers optimize the total cost of ownership of their assets. To do this, we provide IoT-enabled solutions, as well as upgrade, repair, retrofit, and remanufacture services.

Peace of mind through... Well-being Performance

Green Premium products are RoHS and REACH compliant. We're going beyond regulatory compliance with step-by-step substitution of certain materials and substances from our products.

Improved sales through... Differentiation

Green Premium delivers strong value propositions through third-party labels and services. By collaborating with third-party organizations we can support our customers in meeting their sustainability goals such as green building certifications.
