

# M8 AND M12 CONNECTIVITY FOR INDUSTRIAL APPLICATIONS

THE SOLUTION FOR UNCONTAMINATED AND SPECIAL ENVIRONMENTS

**SICK**  
Sensor Intelligence.

# CONNECTING EVERYWHERE

Industrial automation is demanding, not only of sensor solutions. The connectors used also have to have the resilience and performance to meet the daily challenges of harsh industrial environments.

SICK provides a wide range of connectivity solutions for the many requirements of industrial automation. You benefit from more than just a comprehensive portfolio of accessories:

You also save time and money, thanks to our simple order process and swift delivery of sensors with suitable connectors.

Applications in harsh environments are especially demanding when it comes to plug connectors and cables. Cleaning agents, oils, and lubricants, and heavy mechanical contamination demand different connectors which have special features designed precisely for the specific requirements.

In SICK's wide portfolio you will always find a solution for the following fields of application:

- Connectivity for hygienic and washdown zones
- Connectivity for zones with oils, coolants, or lubricants
- Connectivity for zones with chemicals and for all fields of application with no mechanical, chemical, or other contamination.

This compact brochure gives an overview of the fields of application and distinguishing features of the various M8 and M12 standard cables produced by SICK.

You will find further information about terms marked with a → in the glossary.

Fields of application .....	4
Cost-effectiveness and flexibility for installation on site. ....	7

# CONNECTIVITY FOR HYGIENIC AND WASHDOWN ZONES

<sup>\*)</sup> PP variants. <sup>\*\*)</sup> PVC variants.

## The challenge

As the connectors are used in cold stores and washdown zones, they must be highly resistant to chemical, thermal, and mechanical contamination. Complying with hygiene requirements is the highest priority. Using a suitable mounting tool ensures a watertight connection between the sensor and cable → [page 40](#).

## Essential features

The connectors for this area feature → IP enclosure ratings IP69K for protection from the effects of high pressure cleaning and steam cleaning. The Ecolab certification also indicates that the cables for this zone are particularly resistant to aggressive acidic and alkaline cleaning agents. In addition, these cables have coupling nuts made of stainless steel (V4A).

## The SICK solution

### → PVC cables

- Absolute impermeability provided by dual-action (axial and radial) profile seal.
- The special profile seal on these connecting cables provides even better impermeability than a classic O-ring seal.
- Good shock and vibration resistance up to 50 g with the dual action interlock.
- Integrated fixed stop prevents the plug connector from being screwed too tight

### → PP cables

- Consistent use of FDA approved materials
- Hygienic design based on EHEDG recommendations. Designed with very smooth surfaces and no gaps to prevent dirt getting trapped.
- Very high temperature resistance: -40 °C ... +105 °C
- Suitable for drag chains
- Resistant to lactic acid, → microbes and hydrolysis

Connectivity for hygienic and washdown zones		
		
Cable material	PVC overmolded with PUR	PP
Cable jacket color	Gray	White
Enclosure rating	IP65, IP67, IP69K	IP67, IP69K
Knurled nut material	Stainless steel (V4A/1.4404)	Stainless steel (V4A/1.4404)
Temperature range	-30 °C ... +80 °C for fixed installation -5 °C ... +80 °C for flexible use	-40 °C ... +105 °C for fixed installation -25 °C ... +105 °C for flexible use
Certifications	Ecolab <sup>1)</sup> , CSA, UL	Ecolab <sup>2)</sup> , FDA
Hygienic design	No	Yes

<sup>1)</sup> Cleaning agents tested: P3-topactive DES, P3-topax 19, P3-topax 56, P3-topax 66, and P3-topax 99. All other cleaning agents must be tested before use to assess resistance to chemicals.

<sup>2)</sup> Cleaning agents tested: P3-topax 52, P3-topax 66, P3-topax 91, P3-topactive 200, and P3-topactive DES. All other cleaning agents must be tested before use to assess resistance to chemicals.

# CONNECTIVITY FOR ZONES WITH OILS, COOLANTS, OR LUBRICANTS

## The challenge

The action of cutting oils and cooling lubricants on system components is extremely aggressive. To prevent sensor failure it is important for the connectors to have a high resistance to these aggressive substances.

## Essential features

Because they are used in a harsh environment the connectors must be resistant to oils and lubricants, able to withstand heavy mechanical loads, and → suitable for drag chains.

## The SICK solution

### → PUR cables

- High resistance to oils, coolants and lubricants
- Good wear resistance
- Suitable for drag chains
- Resistant to microbes and hydrolysis
- Flame resistant and self extinguishing
- Free of paint wetting impairment substances (→ PWIS free)
- → Silicone free
- → Halogen free
- UL approval

Connectivity for zones with oils, coolants, or lubricants	
Cable material	PUR
Cable jacket color	Black
Enclosure rating	IP65, IP66K, IP67
Knurled nut material	Nickel plated zinc die cast
Temperature range	-40 °C ... +80 °C for fixed installation -25 °C ... +80 °C for flexible use -25 °C ... +85 °C, head
Certifications	UL, CE <sup>1)</sup>

<sup>1)</sup> Applies to variants that are subject to the Low Voltage Directive. For more detailed information, see the product data sheet at [www.sick.com](http://www.sick.com).

# CONNECTIVITY FOR UNCONTAMINATED APPLICATIONS

## The challenge

PVC connectors can be used for all standard applications. This means all applications involving no cleaning processes or other challenges.

They can support a large variety of industrial applications. As the PVC material is highly resistant to chemicals these standard connectors can also be used in processes involving chemical cleaning, once they have been tested.

## Essential features

Connectors which are easy to use are a great advantage in all industrial applications. One factor that contributes to this is the fact that PVC cables are easy to strip.

For fields of application with low to moderate contamination and flexible applications not involving forced guidance or tensile stress, the most important requirement for connectors is cost efficiency. They must be suitable for use in both dry and humid rooms.

## The SICK solution

### → PVC cables

- Very easy to strip because of the nature of the jacket and the conductor insulation
- Free of paint wetting impairment substances (PWIS-free)
- Silicone free
- → Flame resistant and self extinguishing
- Excellent price/performance ratio
- UL approval

Connectivity for uncontaminated applications	
Cable material	PVC
Cable jacket color	Gray
Enclosure rating	IP65, IP66K, IP67
Knurled nut material	Nickel plated zinc die cast
Temperature range	-30 °C ... +80 °C for fixed installation -5 °C ... +80 °C for flexible use -25 °C ... +85 °C, head
Certifications	UL, CE <sup>1)</sup>

<sup>1)</sup> Applies to variants that are subject to the Low Voltage Directive. For more detailed information, see the product data sheet at [www.sick.com](http://www.sick.com).

# COST-EFFECTIVENESS AND FLEXIBILITY FOR INSTALLATION ON SITE

### The challenge

If it is difficult to plan the wiring for a machine because the requirements are unclear or keep changing, connecting cables and ready to assemble plug connectors together provide a good deal of flexibility and latitude in planning. Depending on the requirements a great variety of cable lengths can be produced and connectors can be matched to the conditions on site. This flexibility saves machine and system operators time and money.

### Essential features

SICK plug connectors use the widespread screw connection as standard. However, the portfolio also includes special plug connectors with insulation displacement connection or Pierce connection. Both types of connection can save a lot of time during installation.

### The SICK solution

#### Field wireable connectors

- M8 and M12 designs
- Many straight and angled variants
- Housing materials: e.g., zinc die cast, PBT or TPE
- Enclosure ratings up to IP69K available (screwed together)

Field wireable connectors	
Enclosure rating	IP65, IP67, IP68, IP69K
Housing materials	Zinc die cast, PBT or TPE
Temperature range	-40 °C ... +85 °C or -25 °C ... +90 °C
Certifications	UL

## CONNECTIVITY FROM SICK – THE BENEFITS ARE CLEAR

### Security – for maximum productivity

You can rely on SICK: First class product quality and safe sensor and cable connections ensure very high machine availability.

### Service – SICK is available for you on site

One of SICK's strengths is its global presence. If necessary, our experts will visit you at your site to advise you about the right connectors for your sensors. We have high product availability, allowing us to deliver our products fast and worldwide. Your satisfaction is our goal.

### Flexibility – customized solutions

Sometimes even a wide range of standard products for passive connectivity cannot fulfill all the specific requirements and application conditions in the automation industry. For these cases, SICK also offers customized modifications and solutions, for example new length variants or new connector/cable combinations.

## SELECTION GUIDE

	Temperature range <sup>1)</sup>								Features

<sup>1)</sup> For detailed information on temperature ranges for individual products see the product section starting on page → Page 10.

<sup>2)</sup> SICK offers ready to assemble plug connectors with enclosure rating IP67 as standard versions. Special versions are also available with other enclosure ratings.

<sup>3)</sup> Applies to variants that are subject to the Low Voltage Directive. For more detailed information, see the product data sheet at [www.sick.com](http://www.sick.com).

### Performance – SICK adapts its products to your wishes

Our standard products have all the relevant certificates. In addition to the standard portfolio, SICK will provide you with solutions which match your customers' needs exactly. SICK has the perfect combination of sensors and connectors to guarantee outstanding sensor performance.

### Price – the best products at low cost

For SICK, complying with all the applicable product standards is a matter of course. Plus, SICK offers you an outstanding price/performance ratio.

### At a glance

- Enclosure rating IP69K
- Ecolab certified
- Knurled nuts made of stainless steel (V4A)
- FDA conformity<sup>1)</sup>
- Resistance to lactic acid<sup>1)</sup>
- Hygienic design<sup>1)</sup>
- Torsionable  $\pm 180^\circ/\text{m}$ <sup>1)</sup>
- Weatherproof (resistant to ozone and UV)<sup>1)</sup>
- Dual-action profile seal<sup>2)</sup>
- Halogen free<sup>1)</sup>

<sup>1)</sup> PP (Polypropylene) variants.

<sup>2)</sup> PVC (Polyvinyl chloride) variants.

### Your benefits

- Durability and resistance to corrosion with the high quality cable material (PVC/PP) used
- High resistance to Ecolab-certified cleaning agents
- Resistance to the effects of high pressure cleaning and steam cleaning with protection classes IP67 and IP69K
- PVC cables have a special sealing concept with dual-action profile seal
- PP cables have a hygienic design which prevents trapping of dirt and is easy to clean
- Using a suitable mounting tool ensures a watertight connection between the sensor and cable
- Variants with 3 status display LEDs (Power, N/C, N/O)

= suitable for drag chains

= LED

= shielded

### At a glance

- Very good resistance to oils, coolants, and lubricants
- PWIS free
- Silicone free
- Flame resistant and self extinguishing
- Meets the requirements of the IP65, IP66K, and IP67 enclosure ratings
- Suitable for drag chains
- Halogen free
- Resistant to microbes and hydrolysis

### Your benefits

- The standard connecting cable for all industries which use oils, coolants, and lubricants.
- The high elasticity makes the product very flexible and easy to lay.
- The large number of bending cycles (over five million) make the product suitable for use in drag chains.
- Variants with 3 status display LEDs (Power, N/C, N/O)

= suitable for drag chains

= LED

= shielded

**At a glance**

- Very good resistance to chemicals
- PWIS free
- Silicone free
- Flame resistant and self extinguishing
- Enclosure rating IP65, IP66K, IP67

**Your benefits**

- Easy to use because the cables are very easy to strip
- Good quality at the best price
- Meets the requirements of the IP65, IP66K, and IP67 enclosure ratings
- Variants with 3 status display LEDs (Power, N/C, N/O)

= suitable for drag chains

= LED

= shielded

### At a glance

- Great variety of M8 and M12 plug connectors
- Some of the plug connectors are pre-assembled

### Your benefits

- A good deal of latitude in planning and flexibility for installation
- Many plug connectors have connectors which enable fast assembly
- Field wireable connectors also save time which brings the costs down
- Different connectors (differentiated by the type code ending):
  - PC = quick connection (→ Pierce connection)
  - QU = quick connection (→ Insulation displacement connection)
  - FE = quick connection (spring connection)
  - N = stainless steel knurled nut
  - X = enlarged cable feed-through

Accessories

SICK offers suitable torque wrenches as accessories for its M8 and M12 connector technologies. These guarantee that the connector is tightened securely, and ensures a perfect connection between the sensor and cable.

For comparison:

1. The connector is not screwed tight, thereby allowing medium to penetrate between the connector and O-ring.

2. The connector is screwed too tight. The connection is watertight, however the O-ring will be destroyed.

3. The connector has been tightened with the optimal tightening torque and is watertight.

Your benefits:

- Secure connection: machine downtimes due to loose screws or water ingress will be a thing of the past.
- Simple and safe: an audible “click” indicates that the defined torque has been reached.
- No more injured fingers.

Selecting a suitable torque wrench:

You will find a suitable torque wrench for your product at the start of every product overview table in this brochure.

Figure	Description	Type	Part no.
	M12 torque wrench (AF13, 0.6 Nm)	TOOL-TW06M12AF13	5337208
	M12 torque wrench (AF14, 0.6 Nm)	TOOL-TW06M12AF14	5329575
	M08 torque wrench (AF9, 0.4 Nm)	TOOL-TW06M08AF09	5337207
	M08 torque wrench (AF10, 0.4 Nm)	TOOL-TW04M08AF10	5337210

# GLOSSARY

## B

### Bend radius

Bend radius refers to the smallest possible radius of any bends which may be made in the cable when it is installed without altering the cable properties. The bend radius is given in relation to the cable diameter.

Fig.: Bend radius

### Bending cycle

Bending cycles refers to the number of repetitions of bending in a cable. This property is particularly relevant when using a cable in a drag chain.

## C

### Color code and wire colors

#### M8 cables, 3-pin

Fig.: Color code for M8 cables, 3-pin

#### M8 cables, 4-pin, PUR

Fig.: Color code for M8 cables, 4-pin, PUR

#### M12 cables, 4-pin, PUR

Fig.: Color code for M12 cables, 4-pin, PUR Left: shielded; right: unshielded

#### M12 cables, 5-pin

Fig.: Color code for M12 cables, 5-pin

### Current carrying capacity

This is the value specified by the manufacturer for the current which a plug connector can conduct continuously and which flows through all of its contacts. In relation to this an upper limit of +40 °C is often specified for the ambient temperature for the plug connector, and this must not be exceeded.

## F

### Flame resistance

Materials which prevent fire from spreading or are adequately resistant to it are described as flame resistant.

## H

### Halogen free

Cables are said to be halogen free if the materials used do not contain halogens, e.g., salt forming chlorine, fluorine, bromine, or iodine. The insulation and jacket materials of these cables consist of polymers based on pure hydrocarbons. When such materials are burned, no corrosive or toxic gases are produced, but only water vapor and carbon dioxide.

## I

**Insulation displacement connection**

An insulation displacement contact establishes a connection by cutting through the conductor insulation. It makes a flexible, shockproof, vibration proof, gas tight contact with the litz wire. In type code STE-1204-GQU6 the insulation displacement connection is identified by the suffix "QU".

Fig.: Insulation displacement connection

**IP enclosure ratings**

The IP enclosure ratings define the degree of protection (ingress protection) afforded by the housing against contact, foreign bodies, and water. The first number indicates protection against contact and foreign bodies; the second number is for protection against water.

**IP65**

Protected against access by wire; dustproof; protection against water jets from any angle.

**IP66K**

Protected against access by wire; dustproof; protection against strong high-velocity water with increased pressure.

**IP67**

Protected against access by wire; dustproof; protection against temporary immersion in water (depth of 1 m, 30 minutes).

**IP68**

Protected against access by wire; dustproof; protection against lengthy immersion in water (the requirements must be higher than IP67).

**IP69K**

Protected against access by wire; dustproof; protection against water during high pressure cleaning and steam cleaning (100 bar at 80 °C) from a variety of angles.

**Important note**

Up to enclosure rating IPX6, the lower enclosure ratings are also fulfilled. With the higher enclosure ratings this does not automatically apply to the water protection grades 7, 8, and 9K. If a lower enclosure rating needs to be included this is stated using a double code.

## M

**Material compatibility**

If different materials are used in a product, e.g., PVC cables overmolded with PUR, it is important to consider material compatibility. We recommend testing cables before laying them to check material compatibility.

	PVC	PUR	PP
Acetic acid, 10%	+++	++	+++

Resistant: +++, largely resistant: ++, slightly resistant: +, not resistant: –

\*) There are no test results or evidence concerning the behavior of polypropylene with this material.

Table: Material compatibility

The user should always run tests to check the suitability for specific applications. The chemical resistance given applies only to unpressurized storage and, unless otherwise stated, at room temperature.

## Mounting instructions

For fixed installation of cable, minimum radius: 5 x cable diameter

For fixed installation of cable, minimum radius: 10 x cable diameter

Cable bend radius

Bundling several cables

Fixed installation of cables

## N

### Notch sensitivity

Notch sensitivity describes the tendency of a plastic to crack at points with notches, sharp edges and abrupt changes in wall thickness, i.e., at places of stress concentration.

## O

**Outer jacket**

The outer jacket indicates what the outer layer of the cable is made of.

\*) Vital for cable material).

Fig.: Outer jacket

**Overvoltage category**

In various standards the possible overvoltages are divided into four categories. Three categories are relevant for plug connectors:

**Overvoltage category I**

Pieces of equipment, e.g., plug connectors, which are intended for use in devices or parts of systems where no overvoltage can occur. This covers mainly devices operated at low voltages.

**Overvoltage category II**

Pieces of equipment, e.g., plug connectors, which are intended for use in systems or parts of systems where only switching surges need to be considered, and not lightning surges. This category covers e.g., household appliances.

**Overvoltage category III**

Pieces of equipment, e.g., plug connectors, which are intended for use in systems or parts of systems where only switching surges need to be considered, and not lightning surges. In this category there are also special requirements for safety and availability of the equipment and the networks depending on it. It covers equipment for fixed installations, e.g., protective devices, contactors, switches and sockets.

## P

**Pierce connection**

The contact pin pierces the individual core creating an electrical connection. The contact makes the individual cores into a contact zone.

In type code DOS-0803-GPC the Pierce connection is identified by the suffix "PC".

Fig.: Pierce connection

**Pollution degree**

The contamination to be expected in the immediate environment of a piece of equipment, e.g., a plug connector, is divided into four degrees in the IEC 60664-1 standard:

**Pollution degree 1**

There is no contamination or only dry, non-conductive contamination. The contamination has no effect. Examples of equipment with pollution degree 1: The inside of electrical measuring devices or electronic measuring devices.

**Pollution degree 2**

Normally only non-conductive contamination occurs. However, occasional, temporary conductivity caused by condensation is to be expected. Examples of equipment with pollution degree 2: Household appliances, installation material, lights, and power supply units for office equipment.

**Pollution degree 3**

Conductive contamination occurs or dry, non-conductive contamination that becomes conductive because condensation is to be expected. Examples of equipment with pollution degree 3: Electrical attachments for milling machines and production machines and low-voltage switchgear for machine tools.

**Pollution degree 4**

The contamination generates persistent conductivity caused by conductive dust, rain, or snow. Examples of equipment with pollution degree 4: Devices on the roofs and floors of electric locomotives and buses. Devices in electric underground locomotives.

## PP: Polypropylene

PP is a very high quality jacket material. It is very stable. SICK's flexible PVC free polypropylene cables feature good resistance to the highly effective cleaning agents used in the food and beverage industry. In addition, these cables are highly resistant to microbes and chemicals and are suitable for drag chains. This makes them suitable for the food and beverage industry, and since they are also resistant to lactic acid, they are also ideal for dairies etc. Cables like these are also used in packaging and bottling plants and in industrial mechanical engineering and construction.

## PUR: Polyurethane

PUR cables are characterized by particularly high tensile strength, crack resistance, notch resistance, and wear resistance. They are also suitable for drag chains and have high flexural fatigue strength. SICK's PUR cables are silicone and halogen free and suitable for drag chains. Their outer jacket is made of PUR and their conductor insulation out of polypropylene, which makes them very resistant to wear. They meet the requirements of VDE0472 for oil resistance and flame resistance. Other features of these cables: PVC free, PWIS free, and resistant to hydrolysis and microbes. These characteristics make PUR cables very good for flexible use in robotics, machine tools, and machining.

## PVC: Polyvinyl chloride

While other thermoplastic plastics are mainly applied in the form of ready-to-use molding compound using a spray process, PVC is processed in powder form in an extruder. PVC is self extinguishing even without flame protection; it has good mechanical stability; however, it is notch sensitive. Cables made of pure PVC are suitable for moderate mechanical stress in packaging machines and assembly and production lines. They boast good resistance to acids and lyes, making them ideal for use in the food and beverage industry. SICK's PVC cables are also self extinguishing, PWIS free, and silicone free; however, they have little wear resistance and they are notch sensitive.

→ **Silicone free**

## Product travel path

A machine's product travel path is the route a moving machine part travels along from one end position to the other.

## PWIS free

The term "PWIS free" means that something is free of paint wetting impairment substances. These substances can be present in silicones, materials containing fluorine, and certain oils and fats. Components such as cables that are used in the automotive industry, especially in paint shops, must be PWIS free.

# R

## Rated voltage

The rated voltage is greater than or equal to the nominal voltage and it specifies the maximum value of voltage in normal operation.

## Resistance to microbes and hydrolysis

Under very warm, humid climatic conditions, cables can be damaged by microbes or hydrolysis. Especially microorganisms that produce enzymes can cause severe damage to cables. The first visible sign of attack by microbes is discoloration. Then surface cracks appear, which give the microbes the opportunity to penetrate more deeply and cause complete destruction of the material.

Hydrolysis involves irreversibly breaking down polyester chains, which reduces the mechanical stability of materials. To prevent such defects, SICK provides polyurethane and polypropylene cables, which are more resistant to hydrolysis. These materials are also resistant to microbes, which can be measured by the saponification value.

Materials with a saponification value of up to 200 KOH/g are considered resistant to microbes.

## Robot cables

By contrast with cables for drag chains, robot cables can withstand torsion stresses as well as bending stresses. In machines and plants sensor cables are increasingly being used in energy chains, revolving and tilting tables, and industrial robots. SICK does not currently have these cables in its portfolio; however it can supply them on request.

# S

## Screw connection

The screw connection is the standard for SICK M8 and M12 plug connectors. They can be used to assemble different cables and cable qualities quickly and correctly.

Fig.: Screw connection

## Sealing concept

For PVC M12 connecting cables for hygienic and washdown zones

- ① Dual-action profile seal provides absolute impermeability.
- ② Reaching a torque of 0.6 Nm activates the mechanical vibration protection. This dual-acting interlock offers high shock and vibration resistance up to 50 G.
- ③ Integrated fixed stop prevents the plug connector from being screwed too tight.
- ④ High-quality material: Long service life and corrosion resistance verified by Ecolab certification.

→ See “Connectivity for hygienic and washdown zones” on page 4

## Shielding

The devices must be made such that:

1. The generation of electromagnetic interference is limited to a level where it is possible to operate the devices as intended;
2. The devices have adequate resistance to electromagnetic interference so that it is possible to operate them as intended. With round connectors it is important to ensure that the braided shield of the cable is attached carefully to the shield connection of the plug connector. A wraparound attachment (360°) is best in this regard. However, good shielding values, often adequate in practice, can also be achieved by connecting the braided shield firmly to the conductive housing. Plug connectors made only of plastic with no metal sleeves cannot be used for this as the braided shield cannot be attached to them.

It is also important that when the connector is being plugged in that perfect contact is made with the mating connector, and that the mating connector also has a good contact with the device chassis.

## Silicone free

In some areas, such as paint shops, silicones must be avoided. This is because silicones have low surface energy which can cause surface defects in paint films and adhesive layers, which are known as craters. It can even cause areas of glue to peel off. To avoid these paint wetting impairments SICK provides silicone free cables.

## Standards and test parameters

Test parameters	Standards
Enclosure rating, housing	IEC 60529
Mechanical service life	IEC 60512-5
Upper limit temperature	IEC 60512-6
Lower limit temperature	IEC 60512-6
Rated voltage	IEC 60664-1
Rated impulse voltage	IEC 60664-1
Overvoltage category	IEC 60664-1
Pollution degree	IEC 60664-1
Insulating material groups	IEC 60664-1
Impulse test voltage	IEC 60664-1
Current carrying capacity	IEC 60512-3
Specific insulation resistance	IEC 60512-2
Insulation resistance	IEC 60512-2

## Suitability for drag chains

A drag chain (also known as an energy chain) is a device used in mechanical engineering and construction which guides and protects flexible cables and pneumatic or hydraulic hoses. Drag chain cables are connected to machine parts exposed to repetitive movements, e.g., in machine tools, lathes, and high-bay warehouses, and they supply the connected machine parts with power and information. Drag chain cables must meet widely differing mechanical requirements depending on the application in different industry sectors, e.g., in terms of flexibility, bending and torsional properties, number of bend cycles, bend cycle frequency, travel speed, service life, wear resistance, and bend radius. If cables meet these requirements they are said to be suitable for drag chains.

### Typical ranges for cables suitable for drag chains

Maximum speed	0 ... 300 m/min
Maximum acceleration	0 ... 30 m/s <sup>2</sup>
Maximum travel length	0 ... 50 m
Minimum bend radius	> 7 x D <sup>*)</sup>
Maximum possible number of alternating bending movements	0 ... 20 million

<sup>\*)</sup> D = outer diameter of drag chain.

→ Bend radius

→ Travel speed

## T

### TPU: thermoplastic polyurethane

TPU has good electrical properties, feels good, is very flexible over a wide temperature range, and is highly resistant to wear. Thermoplastic polyurethanes are also elastic and cold crack resistant. SICK often uses this material for overmolding plug connectors.

### Travel speed

The speed at which the product travel path is covered.

→ **Product travel path**

## W

### Welding spark resistant

Radiation cross-linked PVC and PUR cables are generally resistant to welding sparks. In comparison to conventional cables they can withstand higher temperatures and they have better wear resistance so they can be used in areas where welding is being done.

### Wire cross-section

Conductors or wires are made of copper. The wire cross-section is specified in mm<sup>2</sup>. The cross-sectional thickness is determined partly by the maximum current to be carried (amperes), and partly by the number of pins and the wires in the cable. With M8 and M12 plug connectors 0.25 mm<sup>2</sup> or 0.34 mm<sup>2</sup> wires are usually used.

## REGISTER AT [WWW.SICK.COM](http://WWW.SICK.COM) TO TAKE ADVANTAGE OF OUR FOLLOWING SERVICES FOR YOU

- ✓ Access information on net prices and individual discounts.
- ✓ Easily order online and track your delivery.
- ✓ Check your history of all your orders and quotes.
- ✓ Create, save, and share as many wish lists as you want.
- ✓ Use the direct order to quickly order a big amount of products.
- ✓ Check the status of your orders and quotes and get information on status changes by e-mail.
- ✓ Save time by using past orders.
- ✓ Easily export orders and quotes, suited to your systems.

## SERVICES FOR MACHINES AND PLANTS: SICK LifeTime Services

Our comprehensive and versatile LifeTime Services are the perfect addition to the comprehensive range of products from SICK. The services range from product-independent consulting to traditional product services.

**Consulting and design**  
Safe and professional

**Product and system support**  
Reliable, fast, and on-site

**Verification and optimization**  
Safe and regularly inspected

**Upgrade and retrofits**  
Easy, safe, and economical

**Training and education**  
Practical, focused, and professional

## SICK AT A GLANCE

SICK is a leading manufacturer of intelligent sensors and sensor solutions for industrial applications. With more than 8,000 employees and over 50 subsidiaries and equity investments as well as numerous agencies worldwide, we are always close to our customers. A unique range of products and services creates the perfect basis for controlling processes securely and efficiently, protecting individuals from accidents and preventing damage to the environment.

We have extensive experience in various industries and understand their processes and requirements. With intelligent sensors, we can deliver exactly what our customers need. In application centers in Europe, Asia and North America, system solutions are tested and optimized in accordance with customer specifications. All this makes us a reliable supplier and development partner.

Comprehensive services round out our offering: SICK LifeTime Services provide support throughout the machine life cycle and ensure safety and productivity.

**For us, that is “Sensor Intelligence.”**

### **Worldwide presence:**

Australia, Austria, Belgium, Brazil, Canada, Chile, China, Czech Republic, Denmark, Finland, France, Germany, Great Britain, Hungary, Hong Kong, India, Israel, Italy, Japan, Malaysia, Mexico, Netherlands, New Zealand, Norway, Poland, Romania, Russia, Singapore, Slovakia, Slovenia, South Africa, South Korea, Spain, Sweden, Switzerland, Taiwan, Thailand, Turkey, United Arab Emirates, USA, Vietnam.
