

Quad high-side smart power solid-state relay

Datasheet - production data

- Fast demagnetization of inductive loads
- Conforms to IEC 61131-2
- ESD according to IEC 61000-4-2 up to +/- 25 KV

Features

Type	V_{demag} ⁽¹⁾	$R_{DS(on)}$ ⁽¹⁾	I_{out} ⁽¹⁾	V_{CC}
VNI4140K-32	V_{CC} -41 V	0.08 Ω	1 A	41 V

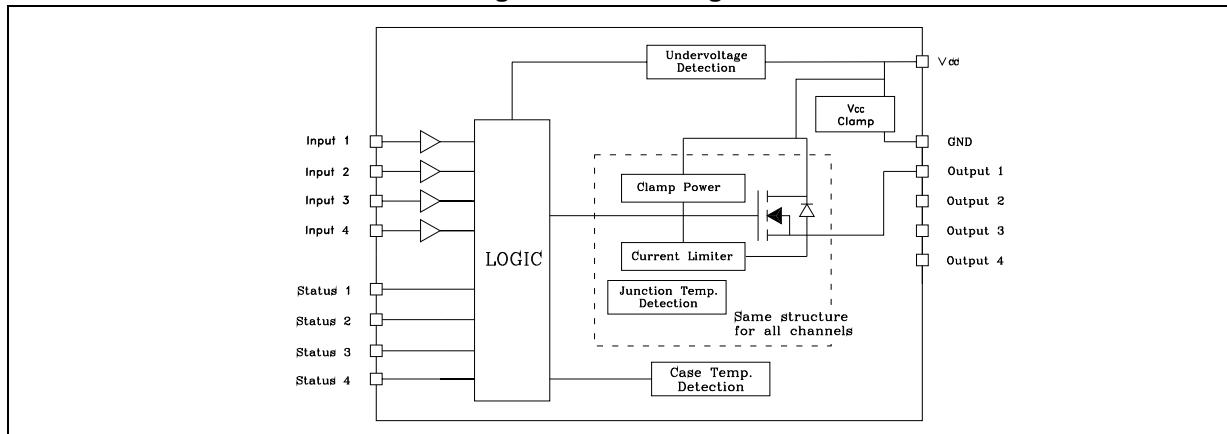

1. Per channel

- Output current: 1 A per channel
- Shorted load protections
- Junction overtemperature protection
- Case overtemperature protection for thermal independence of the channels
- Thermal case shutdown restart not simultaneous for the various channels
- Protection against loss of ground
- Current limitation
- Undervoltage shutdown
- Open drain diagnostic outputs
- 3.3 V CMOS/TTL compatible inputs

Description

The VNI4140K-32 is a monolithic device made using STMicroelectronics VIPower technology, intended to drive four independent resistive, capacitive or inductive loads with one side connected to ground. Active current limitation avoids the system power supply dropping in case of shorted load. Built-in thermal shutdown protects the chip from overtemperature and short-circuit. In overload conditions, the channel turns OFF and back ON automatically so to maintain junction temperature between T_{TSD} and T_R . If this condition causes case temperature to reach T_{CSD} , the overloaded channel is turned OFF and restarts only when case temperature has decreased down to T_{CR} . In case of more than one channel in overload, restart of the overloaded channels is not simultaneous, in order to avoid high peak current from the supply. Non-overloaded channels continue operating normally. The open drain diagnostic outputs indicate overtemperature conditions.

6 Thermal management

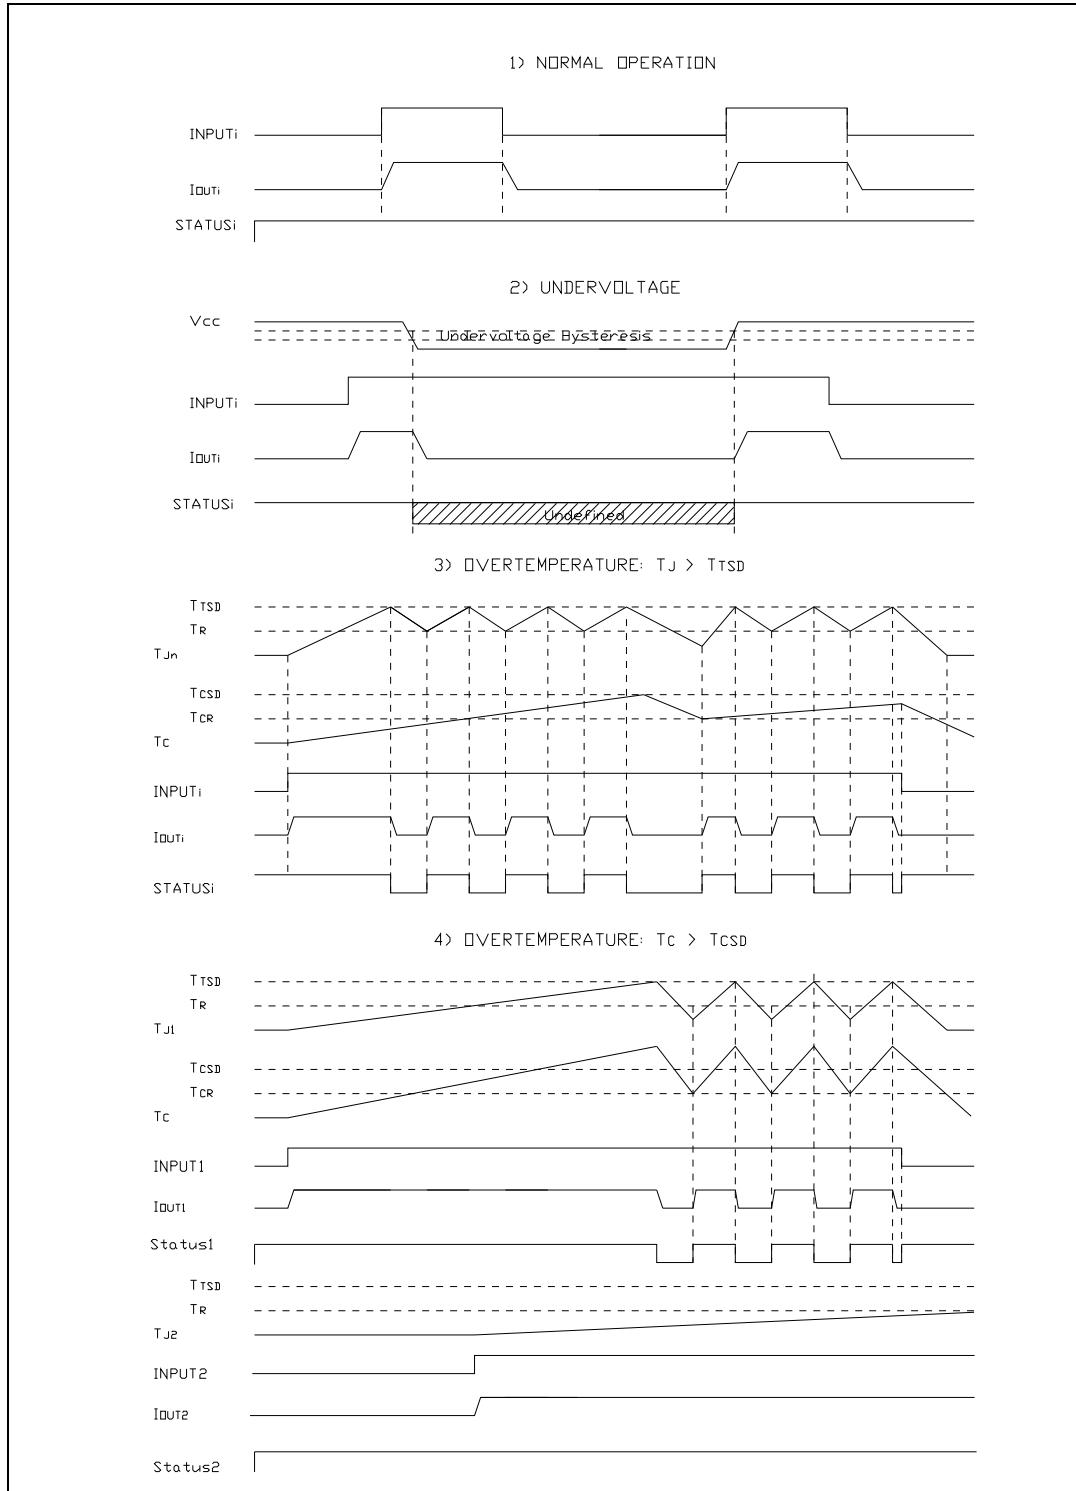

The power dissipation in the IC is the main factor that sets the safe operating condition of the device in the application. Therefore, it must be considered very carefully. Furthermore, the available space on the PCB should be chosen considering the power dissipation. Heat sinking can be achieved using copper on the PCB with proper area and thickness. Two different protections have been implemented to guarantee safety of the device if it overheats due to an overloaded condition or high environment temperature. The following flowchart explains in detail this protection functionality.

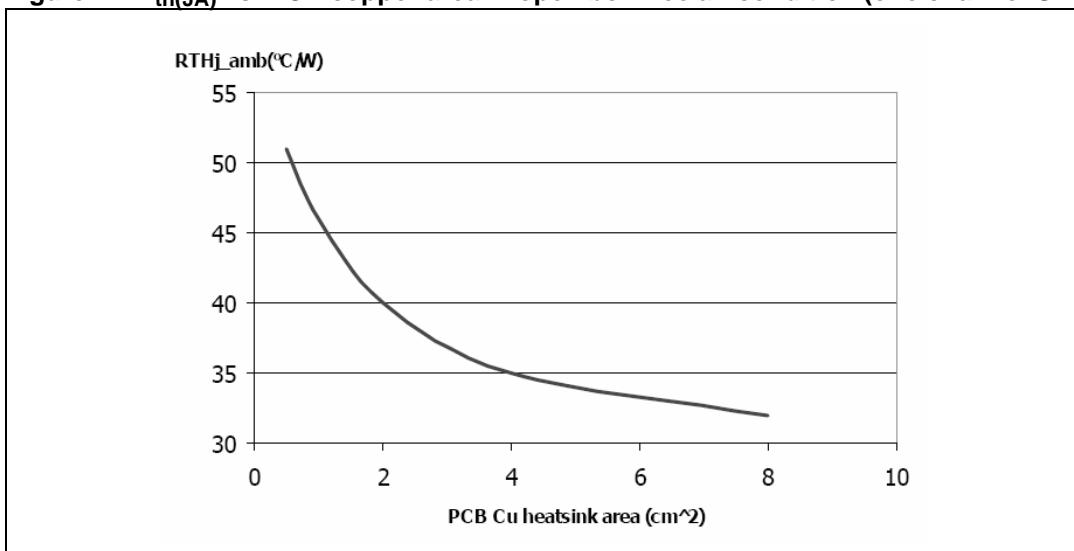

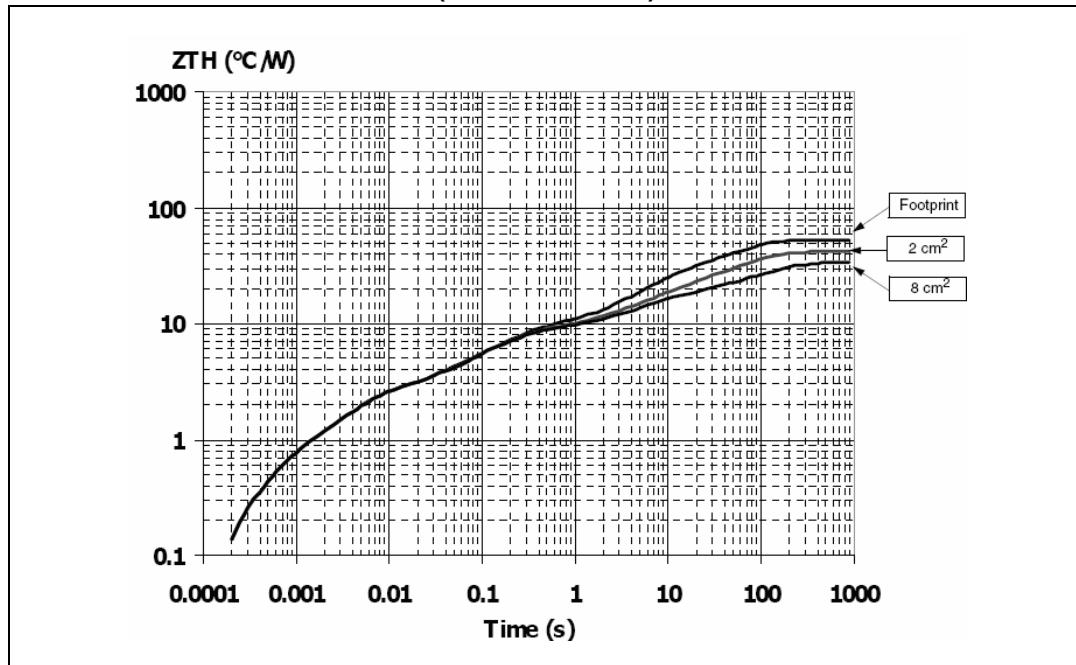

Figure 12. VNI4140K-32 thermal impedance junction-ambient single pulse
(one channel ON)

10 Reverse polarity protection

Reverse polarity protection can be implemented on board using two different solutions:

1. Placing a resistor (R_{GND}) between IC GND pin and load GND
2. Placing a diode between IC GND pin and load GND

If option 1 is selected, the minimum resistance value has to be selected according to the following equation:

Equation 1

$$R_{GND} \geq V_{CC} / I_{GND}$$

where I_{GND} is the DC reverse ground pin current and can be found in [Section 2: Maximum ratings](#) of this datasheet.

Power dissipated by R_{GND} (when $V_{CC} < 0$: during reverse polarity situations) is:

Equation 2

$$P_D = V_{CC}^2 / R_{GND}$$

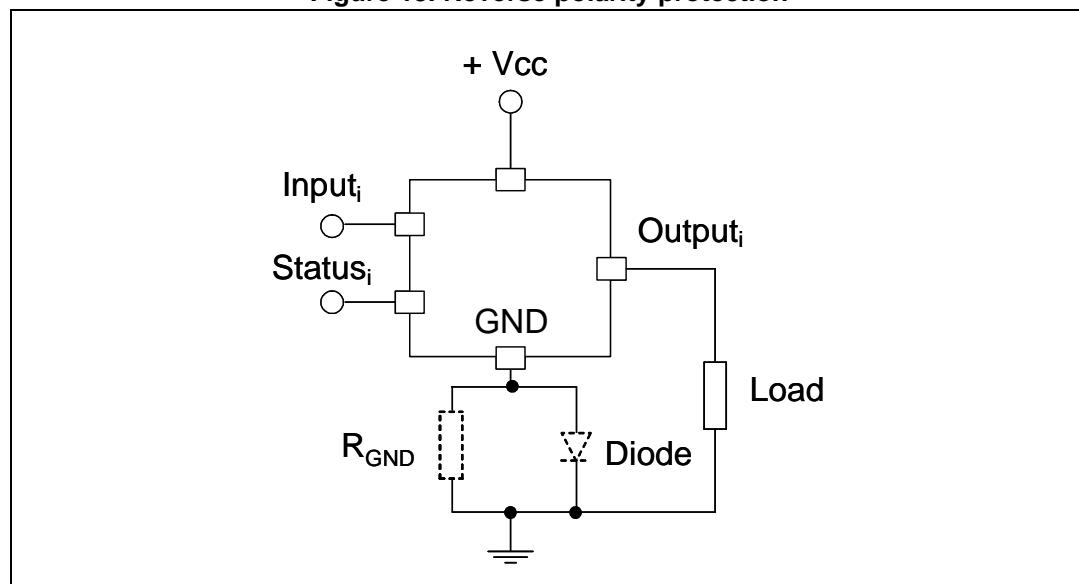

If option 2 is selected, the diode has to be chosen by taking into account $VR_{RM} > |V_{cc}|$ and its power dissipation capability:

Equation 3

$$P_D \geq I_S * V_F$$

Note: In normal conditions (no reverse polarity), due to the diode, there is a voltage drop between GND of the device and GND of the system.

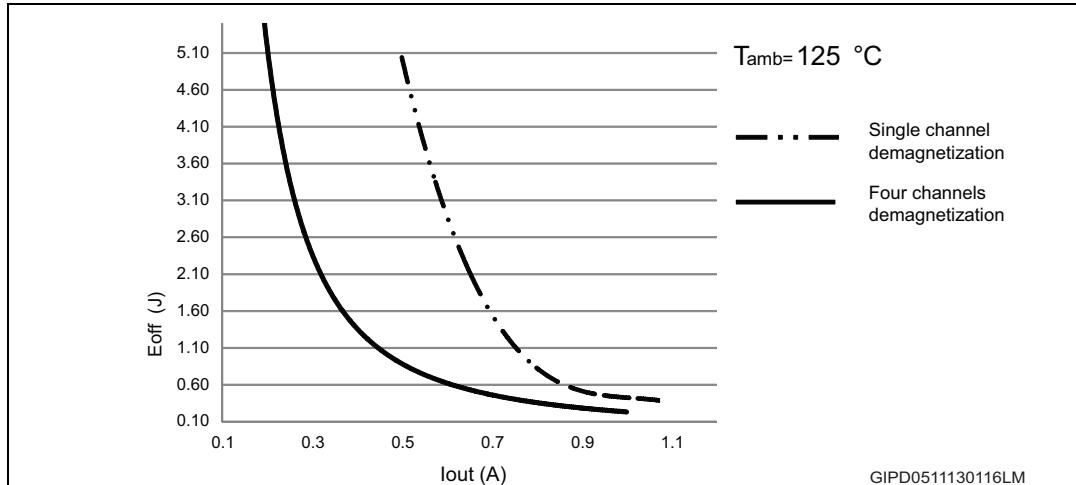

Figure 13. Reverse polarity protection

This schematic can be used with any type of load.

11 Demagnetization energy

14 Revision history

Table 15. Document revision history

Date	Revision	Changes
12-Dec-2011	1	Initial release.
06-Feb-2012	2	Updated I_{lim} minimum value in Table 8: Protection and diagnostic . Inserted new feature: ESD according to IEC 61000-4-2 up to +/-25 KV, in cover page.
07-Mar-2012	3	Suggested footprint inserted. In Table 5 , parameter I_{LGND} has been added.
25-Mar-2013	4	Updated I_{LIM} minimum value in Table 8 . Minor text changes.
06-Nov-2013	5	Updated E_{AS} value in Table 2: Absolute maximum ratings . Added Figure 14 .
11-Dec-2013	6	Updated Section 10 .
