1. Introduction

The Taoglas **AGVLB208.A** is a super compact, high-performance GNSS L1 and L5 stacked active patch antenna designed to deliver robust, reliable positioning in space-constrained applications. Featuring a single-feed stacked ceramic patch structure and an integrated two-stage LNA, this antenna provides strong signal reception, excellent out-of-band filtering, and stable performance across the 1176.45 MHz (L5) and 1575.42 MHz (L1) bands.

Engineered for applications requiring precise multi-band GNSS performance—including GPS, Galileo, GLONASS, BeiDou, QZSS, and SBAS—the antenna offers improved multipath rejection, enhanced gain characteristics, and consistent RHCP polarization to support high-accuracy navigation and timing systems. Its low-profile 20 × 20 × 11.9 mm form factor, combined with a 100 mm 1.13 mm micro-coaxial cable terminated with an I-PEX MHFI connector, enables seamless integration into modern GNSS-enabled devices.

With optimized efficiency, low noise performance, and excellent out-of-band rejection, the AGVLB208.A. is ideally suited for demanding positioning applications in industrial, automotive, UAV, robotics, asset tracking, and other environments where reliable dual-frequency GNSS is essential.

Typical Applications Include:

- High-Accuracy Navigation & Positioning
- Automotive & Transportation
- Drones, UAVs, and Robotics
- Industrial, Infrastructure & Timing
- Consumer and Commercial Devices
- Marine & Outdoor Applications
- Aviation & Safety Systems
- Smart Cities & IoT
