General Description

The TPV721/22 is wideband, low-noise, low-distortion dual operational amplifier, that offer rail-to-rail inputs/outputs and single-supply operation down to 2.2V. They draw 1.6mA of quiescent supply current while featuring ultra-low distortion (0.0002% THD+N), as well as low input voltage-noise density (15nV/√Hz) and low input current-noise density (0.5fA/√Hz).

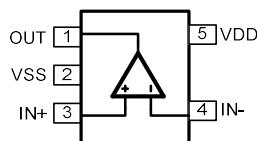

These features make the devices an ideal choice for applications that require low distortion and/or low noise.

These amplifiers have inputs and outputs which swing rail-to-rail and their input common-mode voltage range includes ground. The maximum input offset of these amplifiers is less than 5mV. The TPV721/22 are unity-gain stable with a gain-bandwidth product of 10MHz. The TPV721/22 is available in SOT23-5 SC70-5 and SOP8 MSOP8 packages

The extended temperature range of -40°C to +125°C over all supply voltages offers additional design flexibility.
