

## 300mA, Low $I_Q$ , High PSRR LDO Regulators

### FEATURES

- 2.5V to 5.5V Input Voltage Range
- 380mV @300mA Dropout Voltage
- Excellent Transient Response
- Stable with 1 $\mu$ F Ceramic Output Capacitor
- 70dB PSRR at 1kHz
- Low 37 $\mu$ A Quiescent Current
- Low Shutdown Current: <1 $\mu$ A
- Output Accuracy:  $\pm 2\%$
- Fixed Output Voltage: 1.2V~3.3V (0.1V per step)
- Current Limit Protection
- Thermal Shutdown
- Output Auto-Discharge in Shutdown
- RoHS Compliant and 100% Lead (Fb)-Free Halogen-Free
- 

### APPLICATIONS

- Cellular Phones
- Bluetooth portable radios and Accessories
- Battery-Powered Equipment
- Laptop, Palmtops, Notebook Computer
- PDAs
- Digital still Camera and Video Recorders

### TYPICAL APPLICATION

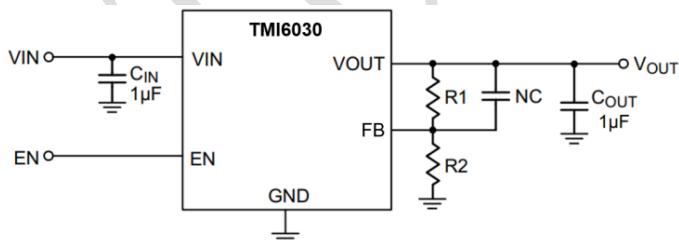

Figure 1. TMI6030 adjustable output Circuit

### GENERAL DESCRIPTION

The TMI6030 is a 300mA, low-dropout (LDO) linear regulator with fast transient response and high PSRR. It offers high output accuracy, low dropout voltage and low quiescent current as well as fast start-up time. This regulator is based on a CMOS process.

The TMI6030 is designed to work with low-ESR ceramic capacitors, reducing the amount of the PCB area necessary for power applications. Only a 1 $\mu$ F ceramic output capacitor can make the device stable over the whole load range current (0mA to 300mA).

The output voltage of TMI6030 can be set by an external resistors divider. When the FB pin is connected to an external resistors divider, its output can be adjusted from 1.2V to 5V. Other key features include over-current protection and thermal shutdown. The TMI6030 is packaged in DFN-1x1-4L, SOT23-5 packages.

## ABSOLUTE MAXIMUM RATINGS

Description	Value	Unit
V <sub>IN</sub> , EN Input Voltage Range	-0.3~6	V
All other pins Voltage Range	-0.3 to (V <sub>IN</sub> +0.3)	V
Junction Temperature	160	°C
Storage Temperature Range	-65~150	°C
Junction-to-ambient Thermal Resistance	250 (SOT23-5) 239 (DFN1x1)	°C/W
Lead Temperature Soldering, 10Sec	260	°C

## ESD RATINGS

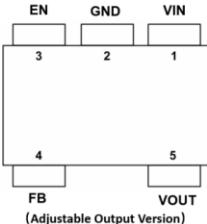

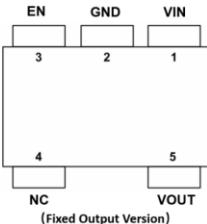

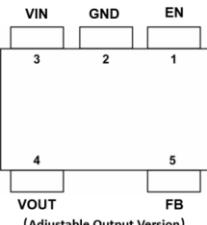

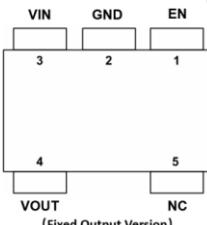

Items	Description	Value	Unit
V <sub>ESD</sub>	Human Body Model for all pins	±2000	V

JEDEC specification JS-001

## RECOMMEND OPERATING CONDITIONS

Items	Description	Min	Max	Unit
Voltage Range	IN	2.5	5.5	V
T <sub>J</sub>	Junction Temperature	-40	125	°C

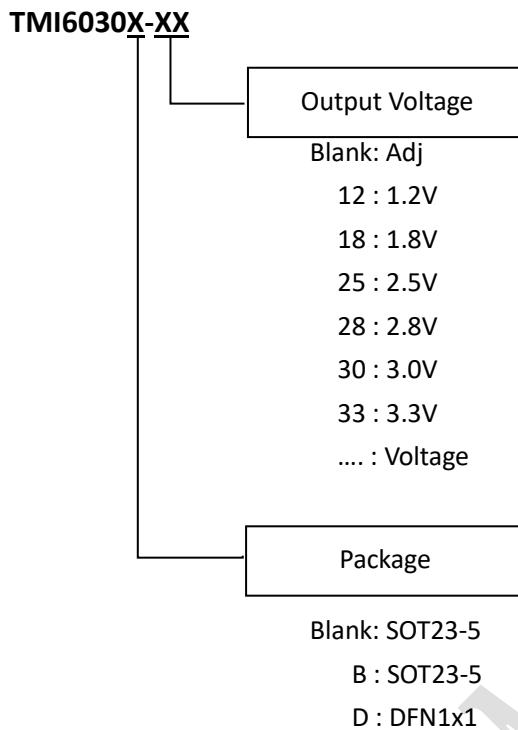

## PIN CONFIGURATION

Package Type	Pin Configurations	
TMI6030 / SOT23-5	 EN 3, GND 2, VIN 1, FB 4, VOUT 5 (Adjustable Output Version)	 EN 3, GND 2, VIN 1, NC 4, VOUT 5 (Fixed Output Version)
TMI6030B / SOT23-5	 VIN 3, GND 2, EN 1, VOUT 4, FB 5 (Adjustable Output Version)	 VIN 3, GND 2, EN 1, VOUT 4, NC 5 (Fixed Output Version)
TMI6030D / DFN1x1	 (Top View) VIN 1, EN 2, VOUT 3, GND 4	

## PIN FUNCTIONS

TMI6030	TMI6030B	TMI6030D	Name	Function
1	3	4	VIN	Input Supply of the LDO.
2	2	2	GND	Signal Ground.
3	1	3	EN	Enable Pin. Connect this pin to ground or less than 0.4V to disable the device, connect EN to 1.5V or above to enable the device. This pin should not be floated.
4	5		NC/FB	Feedback Pin for adjustable output version NC for fixed output version
5	4	1	VOUT	Output of the LDO

## Detailed Function Description

The TMI6030 is a high output current, low dropout linear regulator with fast transient response and high PSRR. It offers high output accuracy, low quiescent current and fast start-up time. It is designed to work with low-ESR ceramic capacitor, reducing the amount of the PCB area. Only a 1 $\mu$ F ceramic output capacitor can make the device stable over the whole load range.

As shown in the function block diagram, the TMI6030 is composed of the bandgap reference voltage, the error amplifier, P-channel MOSFET pass transistor, external resistor divider and some additional protection circuits. The reference voltage, connected to the cathode terminal of the error amplifier, compares with the feedback voltage to regulate the output voltage to make it constant over the whole load current range. If the feedback voltage is lower than the reference voltage, the pass transistor gate is pulled lower to increase its conductivity. This allows more current to flow to the output and increase the output voltage. If the feedback voltage is higher than the reference voltage, the pass transistor gate is pulled higher to decrease its conductivity. This allows less current to flow to the output and decrease the output voltage. The feedback point is the output of the external resistor divider connected to the V<sub>OUT</sub> pin.

### Enable/Shutdown

The TMI6030 is disabled when the EN pin is connected to ground or the voltage less than 0.4V, and the quiescent current is less than 1 $\mu$ A. Connect EN pin to 1.5V or higher voltage to enable the device. This pin cannot be floated.

### Output Auto Discharge

When the regulator is disabled, an internal 130 $\Omega$  resister is connected between V<sub>OUT</sub> and GND to discharge output capacitor C<sub>OUT</sub>.

### Current Limit

The TMI6030 includes a current limit circuit to monitor the gate voltage of the pass transistor to limit the output current. When the output current is higher than the over-current limit, the circuit will clamp the gate voltage of the pass transistor to limit the output current. The typical output current limit is 450mA.

### Adjustable Output Voltage

TMI6030 has a wide output voltage range. The output voltage is programmed by an external resistor divider as shown in Figure 1. The output can be calculated be by the following equation:

$$V_{OUT} = \left(1 + \frac{R_1}{R_2}\right) \times V_{REF} \quad (\text{EQ.1})$$

Where V<sub>REF</sub> is the internal reference voltage, which is 1.2V in TMI6030.

### Short Circuit Protection

When V<sub>OUT</sub> pin is short-circuit to GND, short circuit protection will be triggered and clamp the output current to approximately 90mA. This feature protects the regulator from over current condition and damage due to overheating.

## Thermal Shutdown

The TMI6030 monitors internal temperature. When the junction temperature exceeds 155°C, the over temperature protection (OTP) circuit turn off the pass transistor until the device is cooled down by 30°C. Then the pass transistor resumes. For continue operation, do not exceed absolute maximum junction temperature.

## Application Information

### External capacitor

The TMI6030 requires external capacitor for stability. It is specifically designed to work with low-ESR capacitors requiring minimum PCB area. Place the external capacitors as close as possible to the device.

### Input capacitor

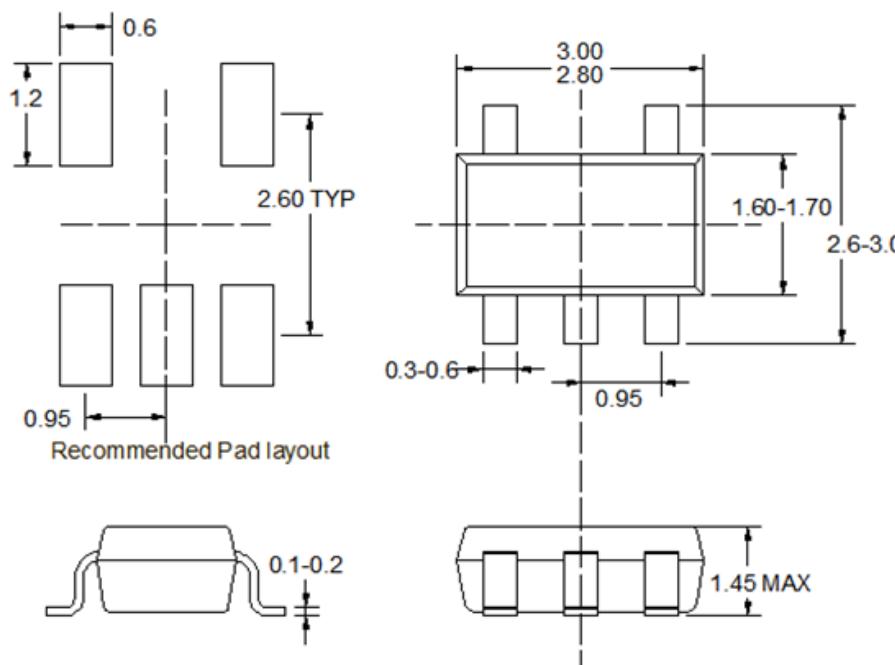

A 1µF or higher capacitance value ceramic capacitor is required between the VIN pin and the GND pin. Place it as close as possible to the device. There are no requirements for the ESR on the input capacitor, but the tolerance and temperature coefficient must be capacitance is 1µF over the whole operating temperature range.

### Output capacitor

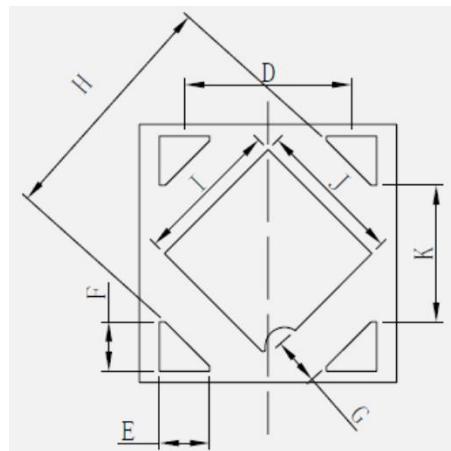

An output capacitor ( $C_{OUT}$ ) is needed to improve transient response and maintain stability. The TMI6030 is stable with very small ceramic output capacitors. A 1µF to 10µF capacitor is suitable for the most TMI6030 applications.
