

Description

The TSV6292, TSV6294 dual and quad operational amplifiers offer a high bandwidth of 1.3 MHz while consuming only 29 μ A. They must be used in a gain configuration (equal or above +4 or -3).

The TSV6292, TSV6294 features low voltage, low power operation and rail-to-rail input and output. The devices also offer an ultra-low input bias current and low input offset voltage.

These features make the TSV6292, TSV6294 family ideal for sensor interfaces, battery supplied and portable applications, as well as active filtering.

Features

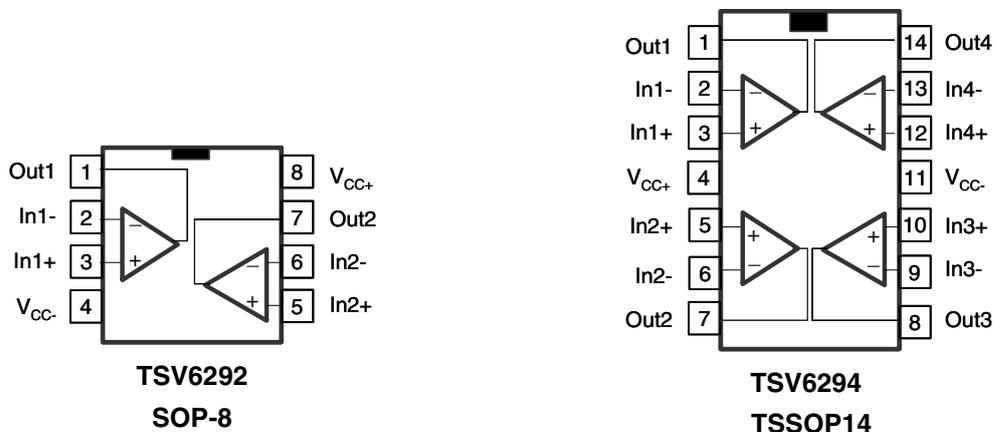

- Rail-to-rail input and output
- Low power consumption: 29 μ A typ, 36 μ A max
- Low supply voltage: 1.5 – 5.5 V
- High gain bandwidth product: 1.3 MHz typ
- Stable when used in gain configuration
- Low power shutdown mode: 5 nA typ
- Good accuracy: 800 μ V max (A version)
- Low input bias current: 1 pA typ
- EMI hardened operational amplifiers
- High tolerance to ESD: 4 kV HBM
- Extended temperature range: -40 to +125° C

Applications

- Battery-powered applications
- Portable devices
- Signal conditioning
- Active filtering
- Medical instrumentation

- All voltage values, except differential voltages are with respect to network ground terminal.
- Differential voltages are the non-inverting input terminal with respect to the inverting input terminal.
- $V_{CC-} - V_{in}$ must not exceed 6 V, V_{in} must not exceed 6V.
- Input current must be limited by a resistor in series with the inputs.
- Short-circuits can cause excessive heating and destructive dissipation.
- R_{th} are typical values.
- Human body model: 100 pF discharged through a 1.5 k Ω resistor between two pins of the device, done for all couples of pin combinations with other pins floating.
- Machine model: a 200 pF capacitor is charged to the specified voltage, then discharged directly between two pins of the device with no external series resistor (internal resistor < 5 Ω), done for all couples of pin combinations with other pins floating.
- Charged device model: all pins plus package are charged together to the specified voltage and then discharged directly to ground.
